CGO

1 Lanterna di robusta concezione realizzata in termoplastico.

2 Corpo-pompa in PP, PVDF, di elevato spessore, il pezzo viene stampato ad iniezione.

3 Girante centrifuga in PP, PVDF, versione semi-aperta per liquidi carichi e chiusa per il pompaggio di soluzioni con temperature elevate. Autobilanciamento assiale garantito da contropalettature posteriori, inserto centrale metallico protetto

4 Camicia in PP, PVDF, riveste interamente, nella parte a contatto con il liquido pompato, l'albero in acciaio e viene realizzata in un unico pezzo. Ruota solidale con la girante ma ne è indipendente

6 Tenuta meccanica standardizzata, selezionata a seconda dei liquidi pompati, delle temperature e delle ore di lavoro sopportate dalla macchina. Possono essere montati sulle pompe CGO i tipi B6E, B6EDF, J5G, J5H ,TLE e TLF.

7 Supporto albero realizzato in fusione d'alluminio è composto da tre pezzi.

8 Cuscinetto anteriore a sfere radiale rigido, adatto soprattutto a resistere ai carichi radiali causati durante il funzionamento della macchina .

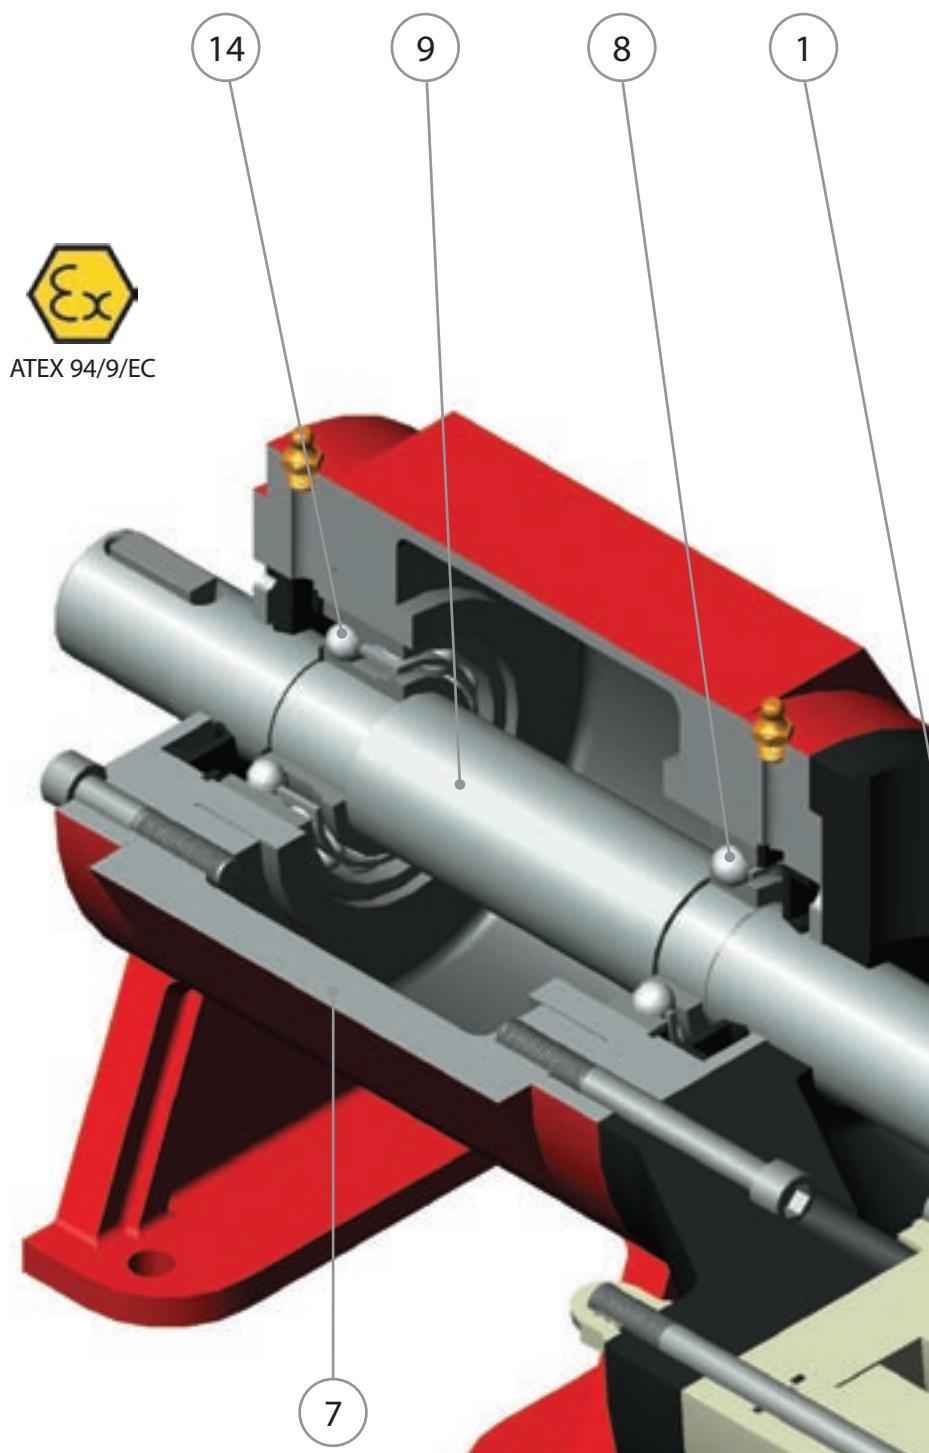

9 Albero bilanciato in acciaio inossidabile AISI 420, strutturato per sopportare agevolmente forze torsionali e radiali. Ricavato completamente da barra piena tramite lavorazione meccanica

10 Cassastoppa in PP, PVDF, montata all'interno del coperchio e completamente indipendente, di facile sostituzione

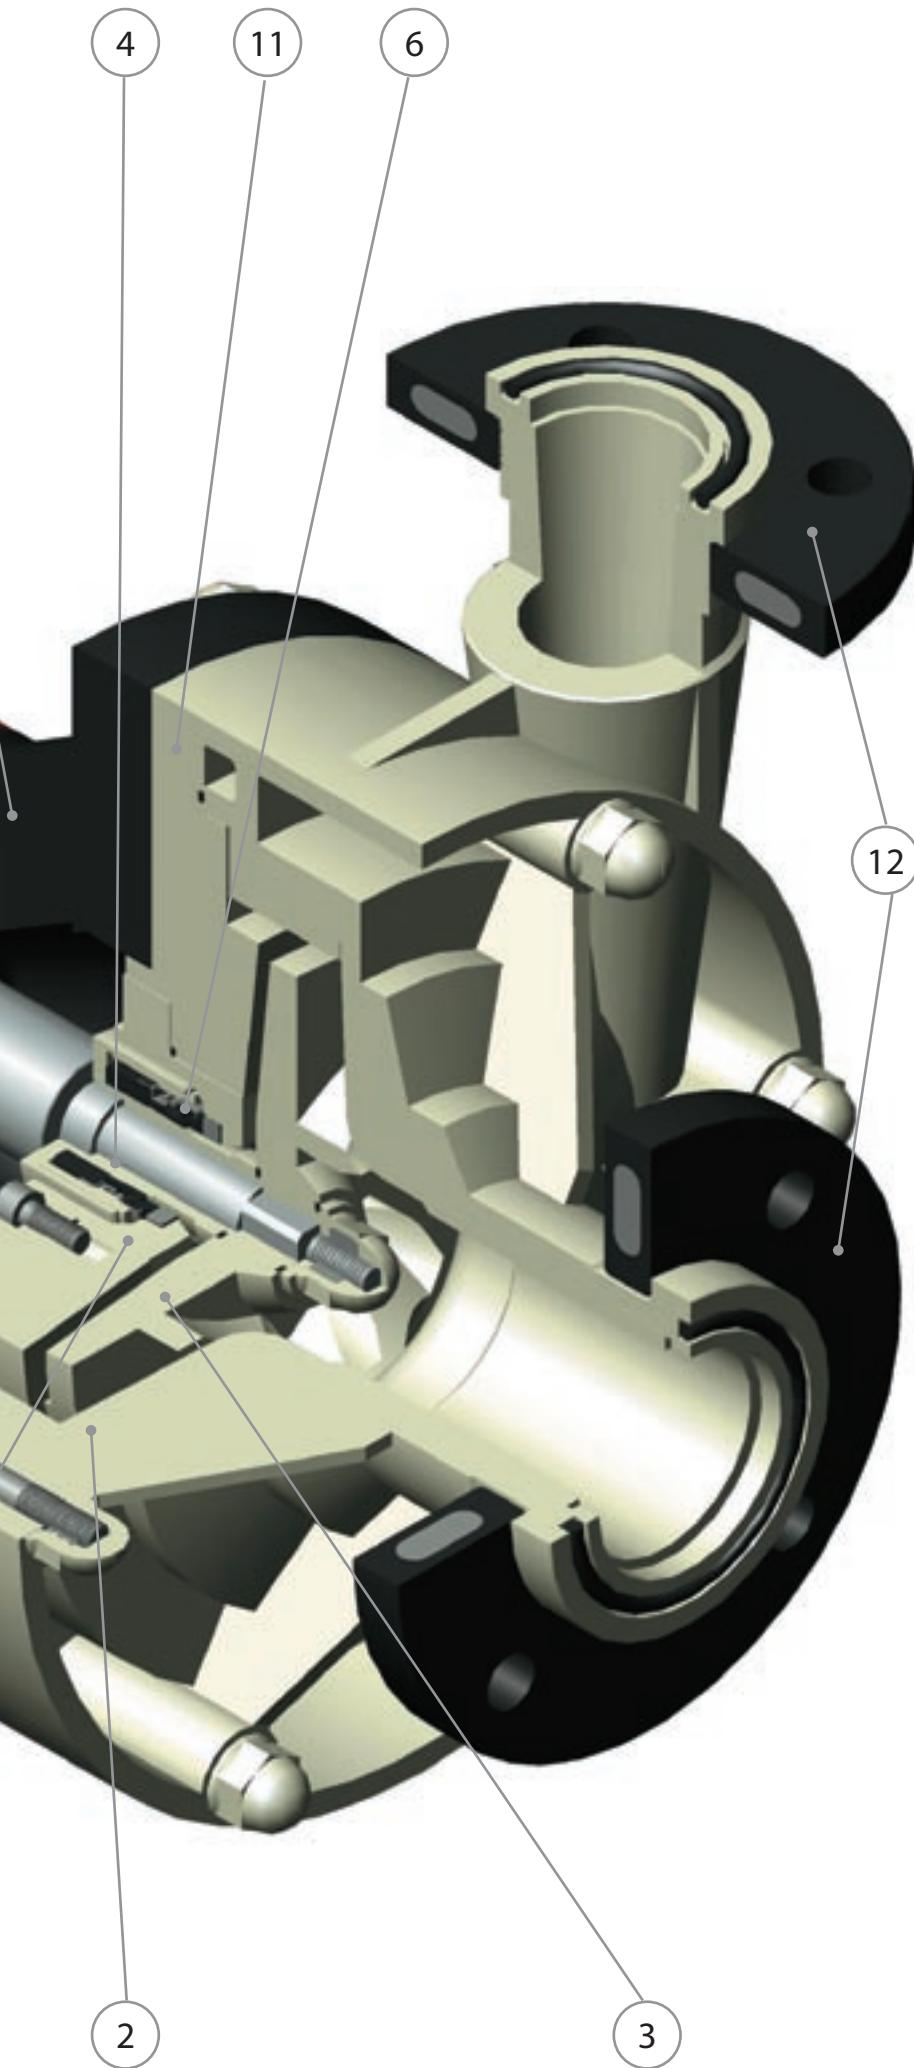

11 Coperchio interamente in PP, PVDF, contenuto tra il corpo la flangia della lanterna

12 Flange libere in PP caricato vetro rinforzate internamente da un'anima in acciaio.

14 Cuscinetto posteriore a sfere a doppi contatti obliqui, capace di sopportare le spinte assiali generate dal liquido durante l'esercizio . Ai modelli che montano i motori taglia 71-80-90, in questa posizione, vengono assemblati cuscinetti a sfere radiali rigidi.

10

- 1** Strong intermediate adaptor; in thermoplastic for
- 2** Casing made of extra-thick PP, PVDF, the part is injection moulded.
- 3** Centrifugal impeller in PP, PVDF ; semi-open version for particle-loaded fluids or closed for pumping solutions at high-temperatures. Axial self-balancing is guaranteed by the rear counterblades; protected central metal insert.
- 4** Shaft sleeve in PP, PVDF, fully covering the part of the steel shaft in contact with the fluid pumped and manufactured as a one-piece component. It rotates integrally with the impeller but is independent from it.
- 6** Standardised mechanical seal, selected according to the fluid pumped and the working temperatures and hours supported by the machine. CGO pumps can be fitted with the B6E, B6EDF, J5G, J5H, TLE and TLF systems.
- 7** The shaft support is a 3-piece construction in cast aluminium.
- 8** Front rigid radial ball bearing, designed above all to resist radial loads during operation of the machine.
- 9** Balanced shaft made of AISI 420 stainless steel, structured to easily support torsional and radial forces. Mechanically machined exclusively from solid bar stock.
- 10** Stuffing box in PP, PVDF, fitted inside the closure, it is fully independent and easy to replace.
- 11** The closure, entirely manufactured in PP, PVDF, is contained between the casing and the intermediate adaptor flange
- 12** Loose flanges in glass-reinforced PP, strengthened internally with a steel core.
- 14** Rear double row angular contact ball bearing, designed to withstand axial thrusts generated by the fluid during operation. Rigid radial ball bearings are fitted in this position for models equipped with size 71-80-90 motors.

Legenda

PP	polipropilene
PVDF	floruro di polivinilidene
EPDM	etilenpropilene
FPM	fluoroelastomero
FFKM	perfluoroelastomero
SiCca	rburo di silicio
Al2O3	allumina

Legend

PP	polypropylene
PVDF	polyvinylidene fluoride
EPDM	ethyl propylene diene monomer
FPM	fluoroelastomer
FFKM	perfluoroelastomer
SiC	silicon carbide
Al2O3	alumina

Caratteristiche generali

- Adatta al pompaggio di liquidi corrosivi
- Costruzione solida
- Montata su base in acciaio e collegata al motore tramite giunto elastico
- Facile manutenzione
- Tenute meccaniche standardizzate
- Verniciatura: primer epossidico 50/80 µm più strato poliuretanico 70/80 µm rosso RAL 3001

Materiali

- Parti a contatto con il liquido pompato in PP – PVDF
- O-rings e guarnizioni in EPDM – FPM – FFKM
- Supporto albero in alluminio
- Albero in acciaio inossidabile AISI 420 rivestito in termoplastico
- Base e coprigiunto in acciaio al carbonio S235JR-EN1025

Temperature d'esercizio

- PP 0°C + 90°C
- PVDF -20°C +110°C

Accessori

- Drenaggio corpo
- Barilotto pressurizzato per flussaggio tenute meccaniche
- Barilotto per autoadescamento
- Protettore di marcia a secco

General characteristics

- Suitable for pumping corrosive fluids
- Solid construction
- Assembled on steel base plate and connected to the motor with an elastic coupling
- Easy to maintain
- Standardised mechanical seals
- Painting: 50/80 µm epoxy primer plus 70/80 µm coat of polyurethane RAL 3001 red

Materials

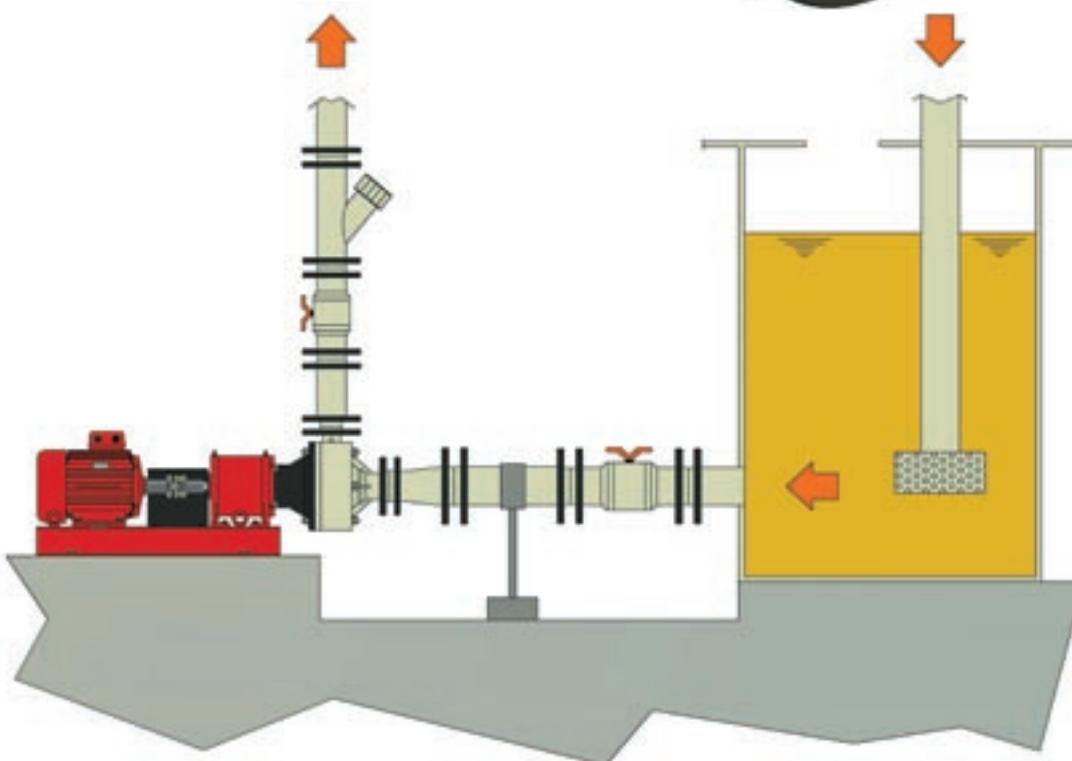

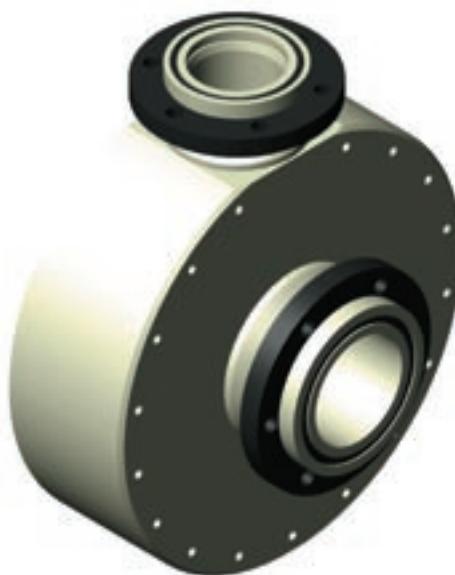

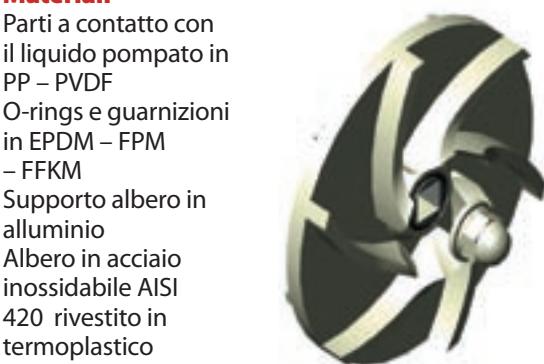

- Parts in contact with the fluid pumped in PP – PVDF
- O-rings and seals in EPDM – FPM – FFKM
- Shaft support in aluminium
- Shaft in thermoplastic-coated stainless steel 420
- Base plate and coupling guard in S235JR-EN1025 carbon steel

Working temperatures

- PP 0°C + 90°C
- PVDF -20°C +110°C

Accessories

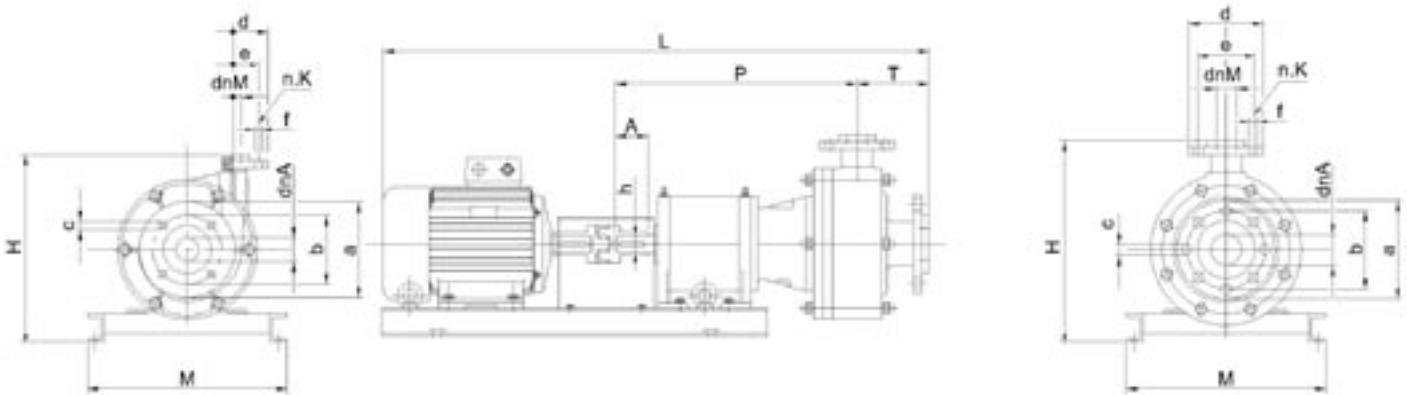

- Casing drain
- Pressurised tank for mechanical seal fluxing
- Self-priming tank
- Dry-run protector

Dimensioni d'ingombro Overall dimensions

Le bocche di aspirazione e mandata sono realizzate di serie con flange ISO (a richiesta ANSI o JIS). I motori montati sono asincroni trifase e selezionati in base alle prestazioni richieste e rispondono alle normative IEC (a richiesta NEMA). Le frequenze disponibili sono 50 e 60 Hz.

The suction and discharge outlets are supplied with ISO flanges (ANSI or JIS flanges are available on request). Three-phase asynchronous motors manufactured in accordance with the IEC standard (NEMA available on request), fitted and selected according to the performance required. 50 and 60 Hz frequencies are available.

CGO - CMO

Tenute meccaniche Mechanical seals

B6E

Tenuta meccanica singola esterna per liquidi corrosivi, puliti e non eccessivamente caldi. Anello statico e rotante in SiC-SiC, molla e armatura in AISI 316 non a contatto con il liquido pompato, soffietto in elastomero EPDM o FPM

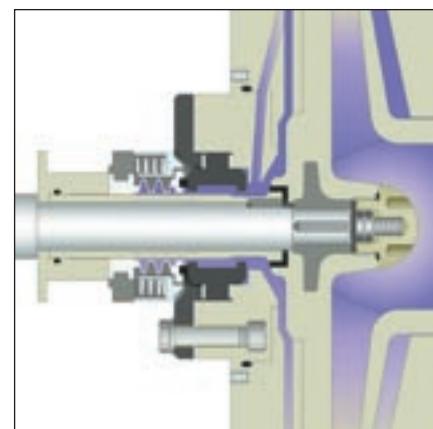

External single mechanical seal for corrosive, clean and not excessively hot fluids. Static and rotating ring in SiC-SiC, spring and metal armour in AISI 316 not in contact with the fluid pumped, bellows in EPDM or FPM elastomer.

JRS JTP JRA

(solo per CMO dalla 32-200 alla 125-250)
Tenuta meccanica singola esterna per liquidi fortemente corrosivi ad alta concentrazione e con temperature elevate. Anello rotante e statico in tre diverse combinazioni (SiC-SiCSiC-Al2O3Al2O3-PTFE-C), soffietto in PTFE, molla e armatura in AISI 316 non a contatto con il liquido pompato, guarnizioni in PTFE

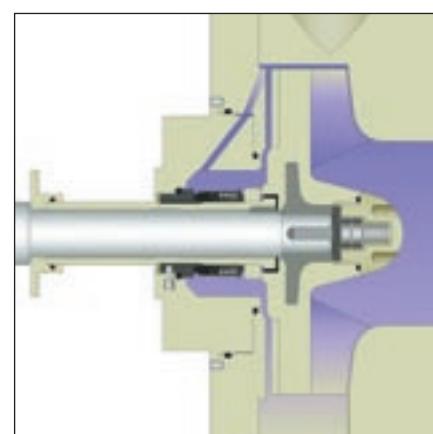

(only for CMO pumps from model 32-200 to model 125-250) Single external mechanical seal for high concentrations of highly corrosive fluids at high temperatures. Static and rotating ring in three different combinations (SiC-SiCSiC-Al2O3Al2O3-PTFE-C), bellows in PTFE, spring and metal armour in AISI 316 not in contact with the fluid pumped, PTFE seals.

J5G J5H

Tenuta meccanica singola interna per liquidi moderatamente corrosivi, puliti e non eccessivamente caldi. Anello rotante e statico in due diverse combinazioni (SiC-Carbografite-SiC-SiC), molla in hastelloy e armatura in monel, oppure in AISI 316, o-rings in elastomero EPDM o FPM

Internal single mechanical seal for moderately corrosive, clean and not excessively hot fluids. Static and rotating ring in two different combinations (SiC-Carbon graphite-SiC-SiC), spring in hastelloy and metal armour in monel, or in AISI 316, O-rings in EPDM or FPM elastomer.

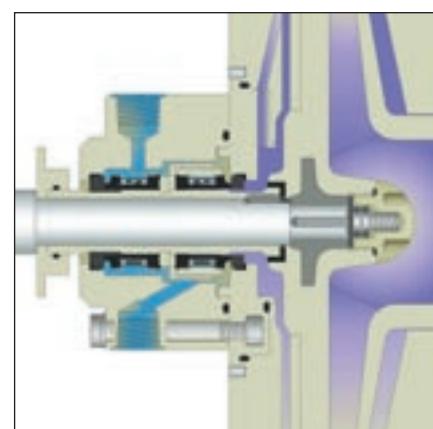

B6EDF

(non applicabile alle macchine dalla 25-100 alla 65-160 della serie CMO)

Tenuta esterna doppiaflussata per liquidi corrosivi, leggermente carichi e non eccessivamente caldi. Anello statico e rotante in SiC-SiC, molla e armatura in AISI 316 non a contatto con il liquido pompato, soffietto in elastomero EPDM o FPM

(not compatible with CMO pumps from model 25-100 to model 65-160) External double flux seal for corrosive, moderately loaded and not excessively hot fluids. Static and rotating ring in SiC-SiC, spring and metal armour in AISI 316 not in contact with the fluid pumped, bellows in EPDM or FPM elastomer.

CGO - CMO

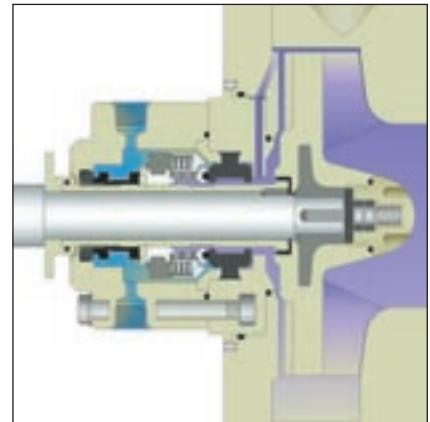

JR2A JR2S JT2P

(solo per CMO dalla 32-200 alla 125-250)

Tenuta esterna doppia flussata per liquidi fortemente corrosivi ad alta concentrazione con temperature elevate contenenti particelle di solidi in sospensione. Anello rotante e statico tenuta lato girante in tre diverse combinazioni (SiC-SiC-SiC-Al2O3-Al2O3-PTFE-C), soffietto in PTFE, molla e armatura esterni in AISI 316, guarnizioni in elastomero EPDM, FPM o in PTFE. Tenuta lato motore, anelli a contatto in SiC, soffietto in EPDM o FPM, molla e armatura in AISI 316

(only for CMO pumps from model 32-200 to model 125-250)

External double flux seal for highly corrosive fluids at a high concentration and high temperatures containing a suspension of solid particles. Static and rotating ring for impeller side seal in three different combinations (SiC-SiC-SiC-Al2O3-Al2O3-PTFE-C), bellows in PTFE, external spring and metal armour in AISI 316, seals in EPDM, FPM or PTFE elastomer. Motor side seal, rings in contact with the fluid in SiC, bellows in EPDM or FPM, spring and metal armour in AISI 316.

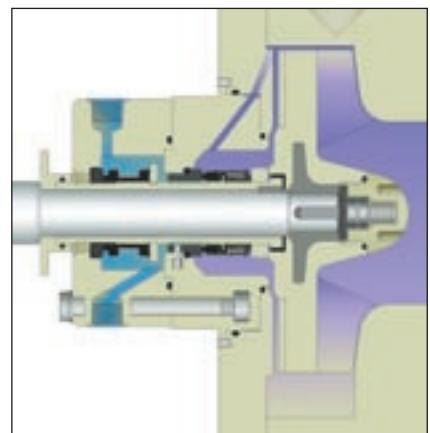

J52G J52S

(non applicabile alle macchine dalla 25-100 alla 65-160 della serie CMO)

Tenuta interna doppia flussata per liquidi moderatamente corrosivi, leggermente carichi e non eccessivamente caldi. Anello rotante e statico tenuta lato girante in due diverse combinazioni (SiC-Carbografite-SiC-SiC), molla in hastelloy e armatura in monel, oppure in AISI 316, o-rings in elastomero EPDM o FPM. Tenuta lato motore, anelli a contatto in SiC, soffietto in EPDM o FPM, molla in AISI 316

(not compatible with CMO pumps from model 25-100 to model 65-160)

Internal double flux seal for moderately corrosive, slightly loaded and not excessively hot fluids. Static and rotating ring for impeller side seal in two different combinations (SiC-Carbon graphite-SiC-SiC), spring in hastelloy and metal armour in monel, or in AISI 316, O-rings in EPDM or FPM elastomer. Motor side seal, rings in contact with fluid in SiC, bellows in EPDM or FPM, spring in AISI 316.

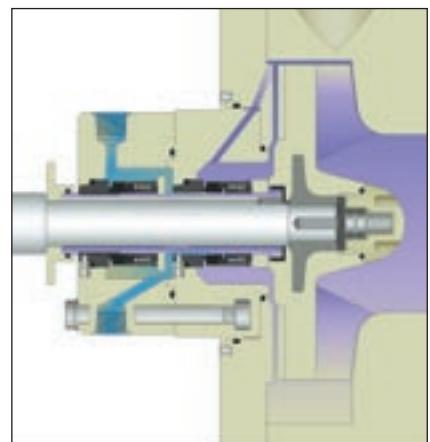

J55S

(non applicabile alle macchine dalla 25-100 alla 65-160 della serie CMO)

Tenuta interna doppia flussata per liquidi moderatamente corrosivi, leggermente carichi e non eccessivamente caldi. Anello rotante e statico tenuta lato girante e lato motore in SiC-SiC, molla in hastelloy e armatura in monel, o-rings e soffietto in elastomero EPDM o FPM

(not compatible with CMO pumps from model 25-100 to model 65-160)

Internal double flux seal for moderately corrosive, slightly loaded and not excessively hot fluids. Static and rotating ring, impeller side and motor side seals in SiC-SiC, spring in hastelloy and metal armour in monel, O-rings and bellows in EPDM or FPM elastomer.

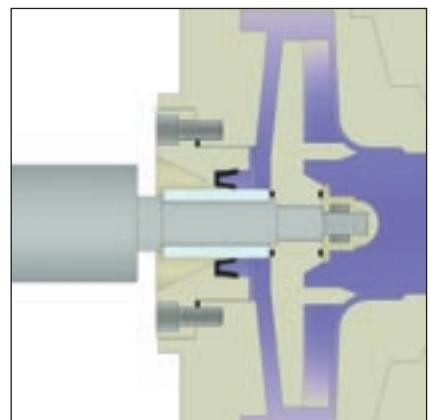

TLE TLF

(non applicabile alle macchine dalla 32-200 alla 125-250 della serie CMO)

Tenuta alabbro in elastomero EPDM o FPM, montata per pompare soluzioni debolmente corrosive e non incrostanti

(not compatible with CMO pumps from model 32-200 to model 125-250)

Lip seal in EPDM or FPM elastomer, used to pump weakly corrosive and non-encrusting solutions.

CMO

1 Lanterna di robusta concezione; in termoplastico per le pompe dalla 25-100 alla 65-160, in metallo dalla 32-200 alla 125-250.

2 Corpo-pompa in PP, PVDF, PEHD, PVC di elevato spessore, ricavato interamente da lavorazione meccanica. Per le macchine 25-125, 32-125, 40-130, 40-160, 50-160, il pezzo viene stampato ad iniezione.

3 Girante centrifuga in PP, PVDF, PE-UHMW, PVC (per le macchine 25-100, 25-125, 32-125, 40-130, 40-160, 50-160, il pezzo è realizzato solo in PP e PVDF); versione semi-aperta per liquidi carichi e chiusa per il pompaggio di soluzioni con temperature elevate. Autobilanciamento assiale garantito da contropaletture posteriori, inserto centrale metallico protetto

4 Camicia in PP, PVDF, PE-UHMW, PVC, (per le macchine 25-100, 25-125, 32-125, 40-130, 40-160, 50-160, il pezzo è realizzato solo in PP e PVDF) riveste interamente, nella parte a contatto con il liquido pompato, l'albero in acciaio e viene realizzata in un unico pezzo. Ruota solidale con la girante ma ne è indipendente

5 Motore elettrico asincrono trifase secondo la normativa IEC (a richiesta NEMA).

6 Tenuta meccanica standardizzata, selezionata a seconda dei liquidi pompati, delle temperature e delle ore di lavoro sopportate dalla macchina. Sulle macchine dalla 25-100 alla 65-160 si possono montare i sistemi B6E, J5G, J5H, TLE e TLF.

9 Albero bilanciato in acciaio al carbonio 39NiCrMo3, o AISI 420 strutturato per sopportare agevolmente forze torsionali e radiali. Ricavato completamente da barra piena tramite lavorazione meccanica

10 Cassastoppa in PP, PVDF, PE-UHMW, PVC, (per le macchine 25-100, 25-125, 32-125, 40-130, 40-160, 50-160, il pezzo è realizzato solo in PP e PVDF), montata all'interno del coperchio e completamente indipendente, di facile sostituzione

11 Coperchio interamente in PP, PVDF, PEHD, PVC, (per le macchine 25-100, 25-125, 32-125, 40-130, 40-160, 50-160, il pezzo è realizzato solo in PP e PVDF) contenuto tra il corpo la flangia della lanterna

12 Flange libere in PP caricato vetro rinforzate internamente da un'anima in acciaio.

13 Base del motore elettrico in acciaio inox AISI 304 elettrosaldato

1 Strong intermediate adaptor; in thermoplastic for pumps from model 25-100 to model 65-160, in metal from model 32-200 to model 125-250.

2 Casing made of extra-thick PP, PVDF, PEHD, PVC, manufactured using mechanical machining processes. For pump models 25-125, 32-125, 40-130, 40-160 and 50-160, the part is injection moulded.

3 Centrifugal impeller in PP, PVDF, PE-UHMW, PVC (the part is only available in PP or PVDF for pump models 25-100, 25-125, 32-125, 40-130, 40-160 and 50-160); semi-open version for particle-loaded fluids or closed for pumping solutions at high-temperatures. Axial self-balancing is guaranteed by the rear counterblades; protected central metal insert.

4 Shaft sleeve in PP, PVDF, PE-UHMW, PVC (the part is only available in PP or PVDF for the pump models 25-100, 25-125, 32-125, 40-130, 40-160 and 50-160) fully covering the part of the steel shaft in contact with the fluid pumped and manufactured as a one-piece component. It rotates integrally with the impeller but is independent from it.

5 Three-phase asynchronous electric motor, in compliance with IEC (NEMA available on request).

6 Standardised mechanical seal, selected according to the fluid pumped and the working temperatures and hours supported by the machine. CMO pumps from model 25-100 to model 65-160 can be fitted with the B6E, J5G, J5H, TLE and TLF systems; the remaining models in the same series can be fitted with any of the sealing systems listed in this catalogue with the exception of the TLE and TLF systems.

9 Balanced shaft made of AISI 420 stainless steel, structured to easily support torsional and radial forces. Mechanically machined exclusively from solid bar stock.

10 Stuffing box in PP, PVDF, PE-UHMW, PVC (the part is only available in PP or PVDF for the pump models 25-100, 25-125, 32-125, 40-130, 40-160 and 50-160), fitted inside the closure, it is fully independent and easy to replace.

11 The closure, entirely manufactured in PP, PVDF, PEHD, PVC (the part is only available in PP or PVDF for the pump models 25-100, 25-125, 32-125, 40-130, 40-160 and 50-160), is contained between the body and the intermediate adaptor flange

12 Loose flanges in glass-reinforced PP, strengthened internally with a steel core.

13 Electric motor base plate in electro-welded AISI 304 stainless steel.

The suction and discharge outlets are supplied with ISO flanges (ANSI or JIS flanges are available on request). Three-phase asynchronous motors manufactured in accordance with the IEC standard (NEMA available on request), fitted and selected according to the performance required. 50 and 60 Hz frequencies are available.

CMO

Curve caratteristiche

Tutte le macchine prodotte sono sottoposte, una per una, a tests idromeccanici con acqua a temperatura di 18°C e sono garantite fino a PN10.

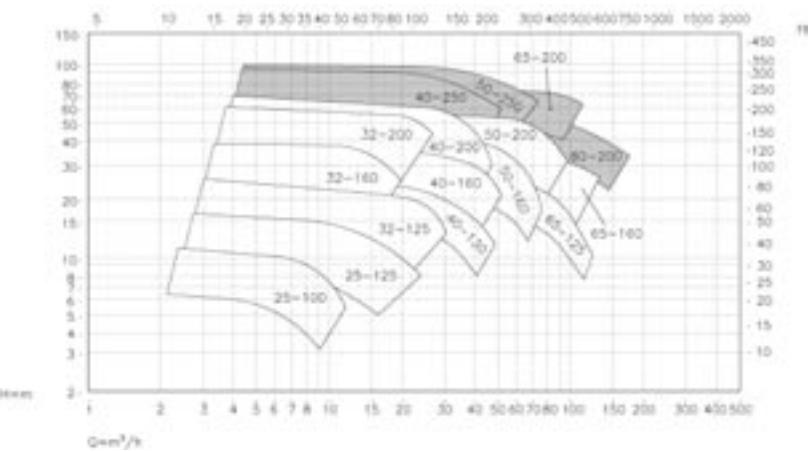

Tutte le macchine prodotte sono sottoposte, una per una, a tests idromeccanici con acqua a temperatura di 18°C e sono garantite fino a PN10.

Characteristic curves

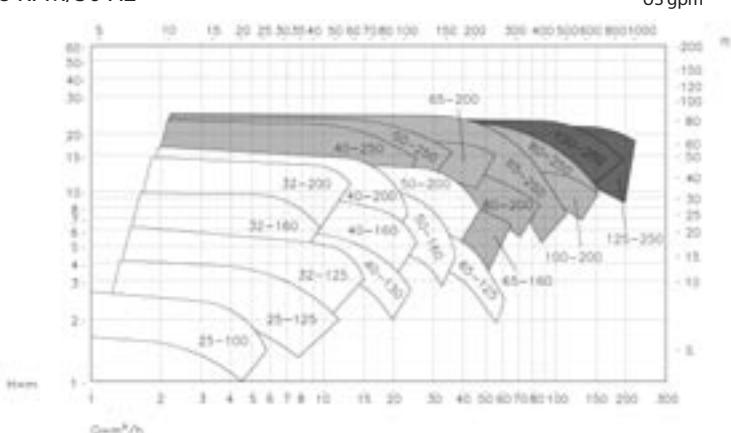

All of the machines manufactured are subjected to hydro-mechanical tests, one by one, with water at a temperature of 18°C and are guaranteed up to PN10.
