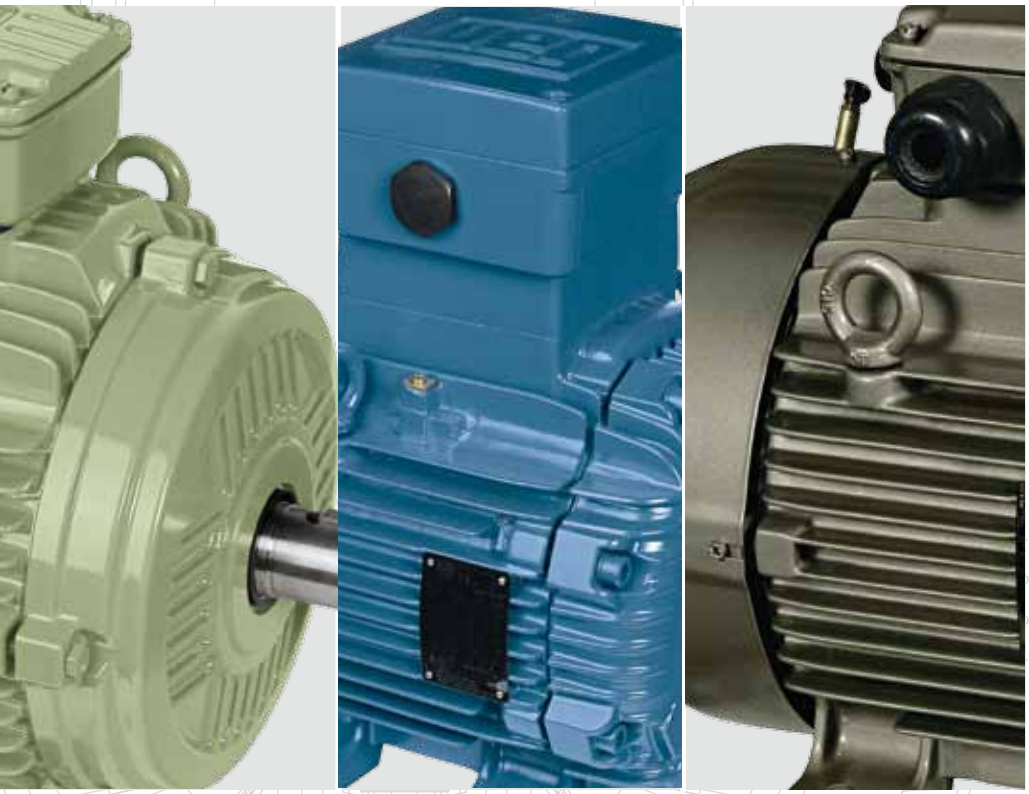
LV Motors

European Market



About WEG

Founded in 1961, WEG is acknowledged today as one of the largest manufacturers of electric motors in the world. Twenty thousand people are employed in the different manufacturing units which cover over 500,000 square meters of constructed area.
In support of exports in over 100 countries worldwide, WEG has branch offices located in all five continents. WEG's great success with export activities is based on the company's willingness to meet worldwide standard requirements, keeping product inventories in strategic locations, personnel training and prompt service.

Worldwide Entities that Have Approved WEG

W21 - Cast Iron Frame Motors Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 355kW
- Frames: 63 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring on both endshields
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Regreasing nipple from frame 225S/M and above
- Metric threaded cable entries on the terminal box
- Thermistors (1 per phase) fitted in frame 160M and above
- Suitable for inverter duty applications
- Color: RAL 5007

Options Available:

- Degree of Protection: IP56, IP65 or IP66
- Bearing seals:
  - Lip seal
  - Oil seal
  - Labyrinth taconite seal and W3seal for frames 90S and above
- Thermal protection:
  - Thermistors: frame 132M and below
  - Thermostats
  - RTD-PT 100
- Space heaters
- Design H
- Class “H” insulation
- Roller bearings for frame 160M and above

More options available, on request

Typical Applications:

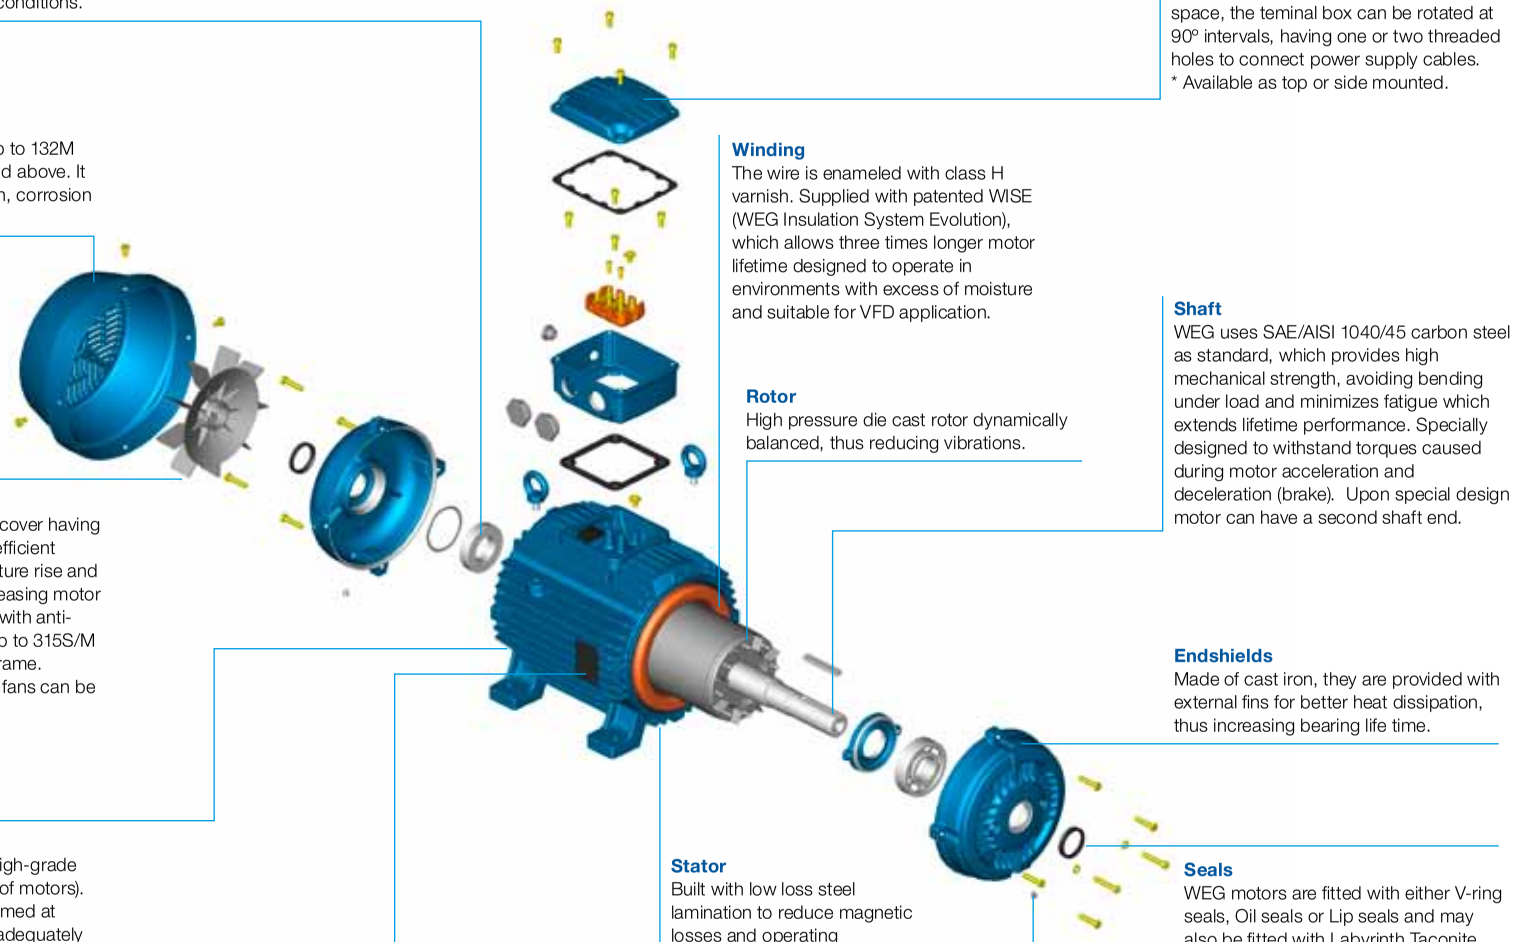
- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Fan cover
Made of steel plate for frames 63 up to 132M and of cast iron for frames 160M and above. It provides higher mechanical strength, corrosion resistance and extended lifetime.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise and minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 63 up to 315S/M frames and aluminium for 355M/L frame. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aimed at improving the heat dissipation and adequately spaced to minimize air blockage due to accumulation of dirt. The motors can be mounted in horizontal or vertical positions.



Terminal Box
Made of cast iron with plenty of internal space, the teminal box can be rotated at 90º intervals, having one or two threaded holes to connect power supply cables.
* Available as top or side mounted.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime performance. Specially designed to withstand torques caused during motor acceleration and deceleration (brake). Upon special design motor can have a second shaft end.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Stator
Built with low loss steel lamination to reduce magnetic losses and operating temperature.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Notes:
**Class "F" insulation with ΔT105K*
Standard voltage, connection and frequency: 220-240V Δ 50Hz
380-415V Δ 50Hz
380-415V Y 50Hz
660-690V Y 50Hz
The values shown are subject to change without prior notice. To obtain guaranteed values please access our website.

W21 - Cast Iron Frame Motors - Improved Efficiency EFF2

Output		380 V								415 V							
		Rated speed (rpm)	% of full load						Full load current I_n (A)	Rated speed (rpm)	% of full load						Full load current I_n (A)

W21 - Cast Iron Frame Motors Premium Efficiency EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 315kW
- Frames: 63 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring on both endshields
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Regreasing nipple from frame 225S/M and above
- Metric threaded cable entries on the terminal box
- Thermistors (1 per phase) fitted in frame 160M and above
- Suitable for inverter duty applications
- Color: RAL 5009

Options Available:

- Degree of Protection: IP56, IP65 or IP66
- Bearing seals:
  - Lip seal
  - Oil seal
  - Labyrinth taconite seal and W3seal for frames 90S and above
- Thermal protection:
  - Thermistors: frame 132M and below
  - Thermostats
  - RTD-PT 100
- Space heaters
- Design H
- Class “H” insulation
- Roller bearings for frame 160M and above

More options available, on request

Typical Applications:

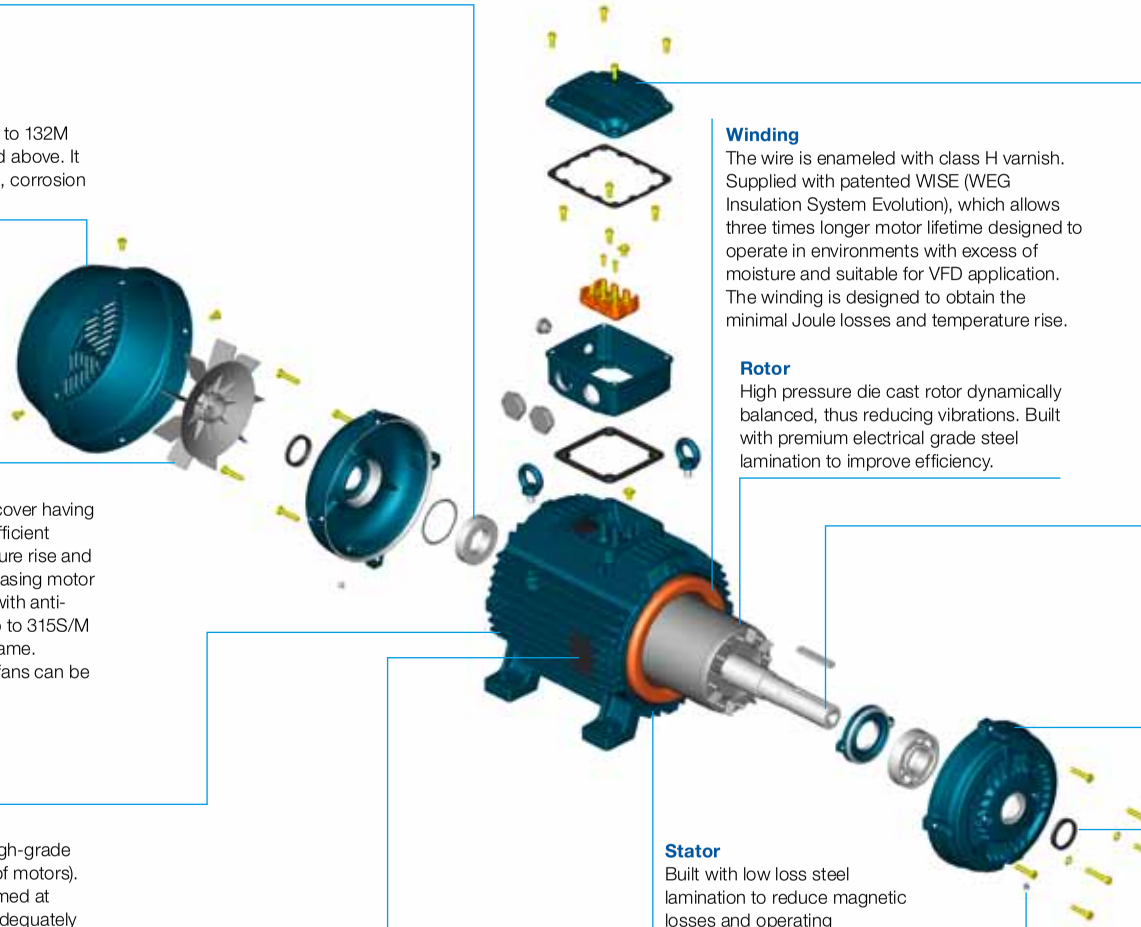
- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Fan cover
Made of steel plate for frames 63 up to 132M and of cast iron for frames 160M and above. It provides higher mechanical strength, corrosion resistance and extended lifetime.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise and minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 63 up to 315S/M frames and aluminium for 355M/L frame. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aimed at improving the heat dissipation and adequately spaced to minimize air blockage due to accumulation of dirt. The motors can be mounted in horizontal or vertical positions.



Terminal Box
Made of cast iron with plenty of internal space, the teminal box can be rotated at 90º intervals, having one or two threaded holes to connect power supply cables.
* Available as top or side mounted.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime performance. Specially designed to withstand torques caused during motor acceleration and deceleration (brake). Upon special design motor can have a second shaft end.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Stator
Built with low loss steel lamination to reduce magnetic losses and operating temperature.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

W21 - Cast Iron Frame Motors
Top Premium Efficiency Exceeds EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 1.15 up to 315kW
- Frames: 112M up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring on both endshields
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Regreasing nipple from frame 225S/M and above
- Metric threaded cable entries on the terminal box
- Thermistors (1 per phase) fitted in frame 160M and above
- Suitable for inverter duty applications
- Color: RAL 6021

Options Available:

- Degree of Protection: IP56, IP65 or IP66
- Bearing seals:
  - Lip seal
  - Oil seal
  - Labyrinth taconite seal and W3seal for frames 90S and above
- Thermal protection:
  - Thermistors: frame 132M and below
  - Thermostats
  - RTD-PT 100
- Space heaters
- Design H
- Class “H” insulation
- Roller bearings for frame 160M and above

More options available, on request

Typical Applications:

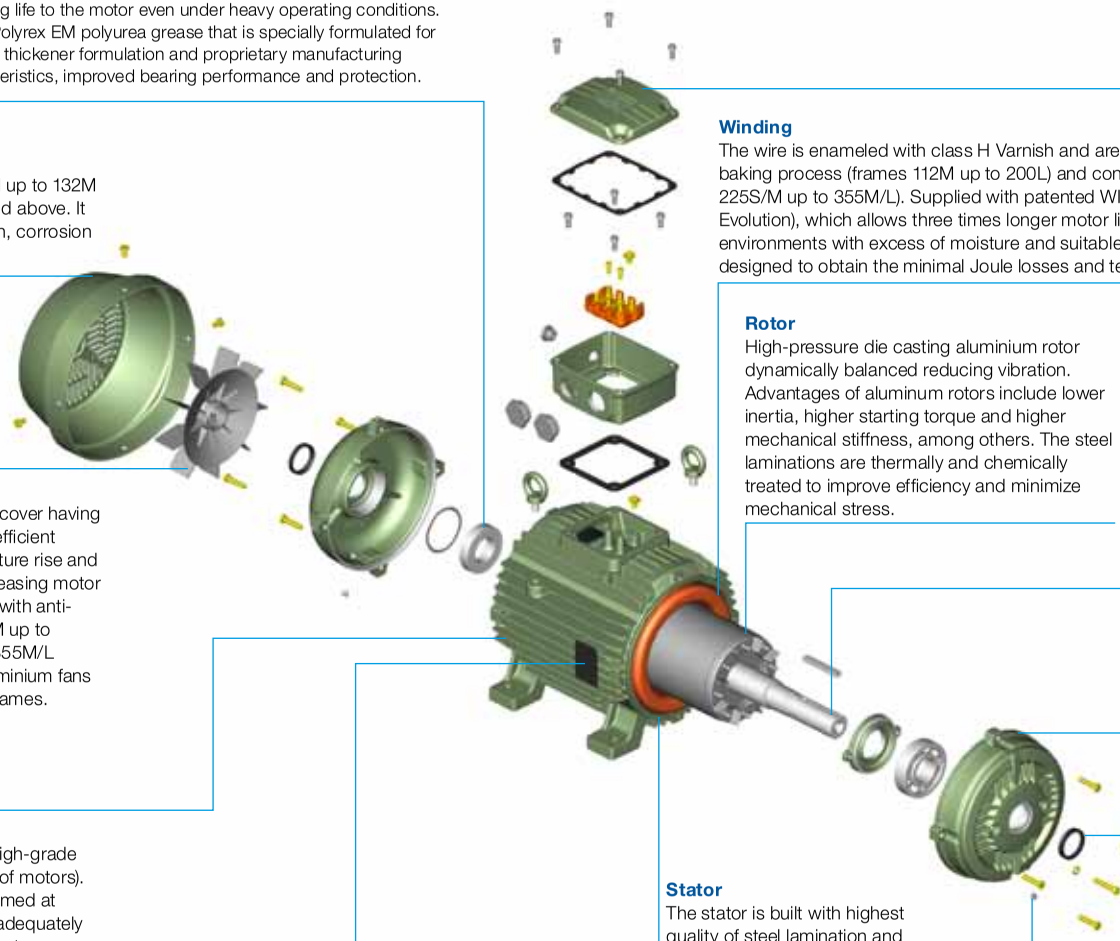
- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.

Bearings
WEG motors are fitted with the highest quality bearings selected among the best manufacturers in the world and designed to ensure long life to the motor even under heavy operating conditions. WEG also uses the Super-premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation and proprietary manufacturing techniques provide low noise characteristics, improved bearing performance and protection.

Fan Cover
Made of steel plate for frames 112M up to 132M and of cast iron for frames 160M and above. It provides higher mechanical strength, corrosion resistance and extended lifetime.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise and minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 112M up to 315S/M frames and aluminium for 355M/L frame. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aimed at improving the heat dissipation and adequately spaced to minimize air blockage due to accumulation of dirt. The motors can be mounted in horizontal or vertical positions.



Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Stator
The stator is built with highest quality of steel lamination and it is thermally and chemically treated to reduce electrical losses and operating temperature. Guarantees high efficiency and extended motor lifetime.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Terminal Box
Made of cast iron with plenty of internal space, the teminal box can be rotated at 90º intervals, having one or two threaded holes to connect power supply cables.
* Available as top or side mounted.

Winding
The wire is enameled with class H Varnish and are impregnated with dipping and baking process (frames 112M up to 200L) and continuous resin flow process (frames 225S/M up to 355M/L). Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.

Rotor
High-pressure die casting aluminium rotor dynamically balanced reducing vibration. Advantages of aluminum rotors include lower inertia, higher starting torque and higher mechanical stiffness, among others. The steel laminations are thermally and chemically treated to improve efficiency and minimize mechanical stress.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime performance. Specially designed to withstand torques caused during motor acceleration and deceleration (brake). Upon special design motor can have a second shaft end.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Notes:
**Class "F" insulation with ΔT105K*
Standard voltage, connection and frequency: 220-240V Δ 50Hz — 380-415V Δ 50Hz
380-415V Y 50Hz — 660-690V Y 50Hz
The values shown are subject to change without prior notice. To obtain guaranteed values please access our website.

Notes:
** Shaft dimensions for II pole motors, only for direct coupling.*
*** For frame 100L, 3kW, 4 poles, Premium Efficiency Line, the L dimension is 420mm and LC dimension is 475mm.*
- All dimensions are in millimeters.
- Larger and smaller flanges on request.
- The data for frame 355M/L shown above are for horizontal mounting applications under standard coupling loads. The customer must inform when application is vertical or under special coupling loads.
- The values shown are subject to change without prior notice. To obtain guaranteed values please contact our nearest sales office.

** This data apply to Cast Iron Frame – Improved Efficiency - EFF2, Premium Efficiency - EFF1 and Top Premium Efficiency – Exceeds EFF1.*

Standard Frame

Aluminium Frame Motors
Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 11kW
- Frames: 63 up to 132M
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Color: RAL 5007

Typical Applications:

- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.

Options Available:

- Non-drive end shaft
- Bearing sealing
- Shaft dimensions to customer requirements
- Canopy for V1 applications
- Special painting
- Space heaters
- Thermal protection (thermistors)
- Class “H” insulation
- Other mounting configurations
- Other modifications, on request

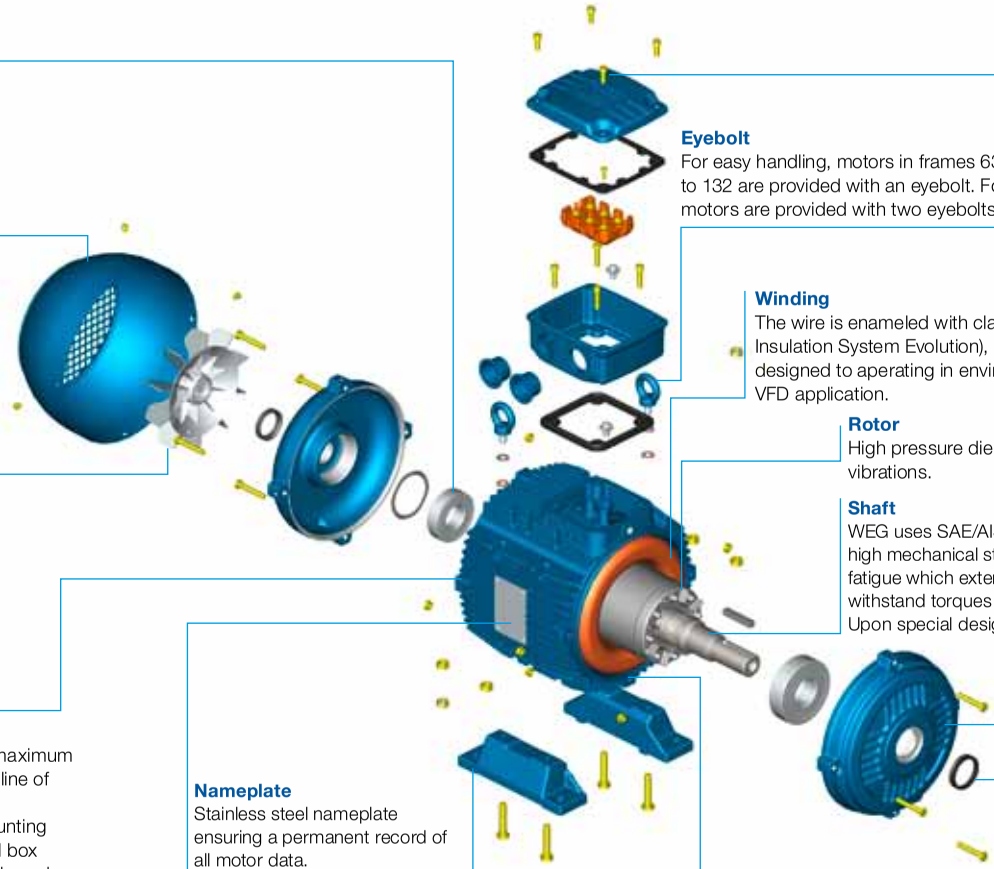
More options available, on request

Bearings
All 3000rpm and 1500rpm motors are supplied with ball bearings as standard. The bearings are designed to ensure long life of the motor, even under heavy operating conditions.

Fan cover
Steel fan covers for 63 up to 132M frames.

Fan
Made of rigid plastic. Non sparking, non toxic, resistant to environmental conditions, and ensures low noise operation.

Frame
Made of Aluminium with external fins for maximum cooling effect and minimum weight. This line of product is defined as a modern and easy assembly system, allowing change of mounting configuration including rotation of terminal box and/or removal of feet. Due to the material used on the frame construction there is an optimization of the electrical and mechanical designs resulting in an improved efficiency of the set and reduced weight. Resistance to corrosion is another benefit making it suitable for severe environments.



Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Feet
Removable feet on aluminium frames allow various mounting configurations.

Terminal Box
Made of cast iron with plenty of internal space, the teminal box can be rotated at 90º intervals, having one or two threaded holes to connect power supply cables.
* Available as top or side mounted.

Eyebolt
For easy handling, motors in frames 63 up to 132 are provided with an eyebolt. Footless motors are provided with two eyebolts.

Winding
The wire is enameled with class H Varnish Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to aperating in environments with excess of moisture and suitable for VFD application.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime performance. Specially designed to withstand torques caused during motor acceleration and deceleration. Upon special design, shaft can have second end.

Stator
Built with low loss electrical steel lamination reducing electrical losses and operating temperature

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Aluminium Frame Motors
Premium Efficiency EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 11kW
- Frames: 63 up to 132M
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Color: RAL 5007

Typical Applications:

- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.

Options Available:

- Non-drive end shaft
- Bearing sealing
- Shaft dimensions to customer requirements
- Canopy for V1 applications
- Special painting
- Space heaters
- Thermal protection (thermistors)
- Class “H” insulation
- Other mounting configurations
- Other modifications, on request

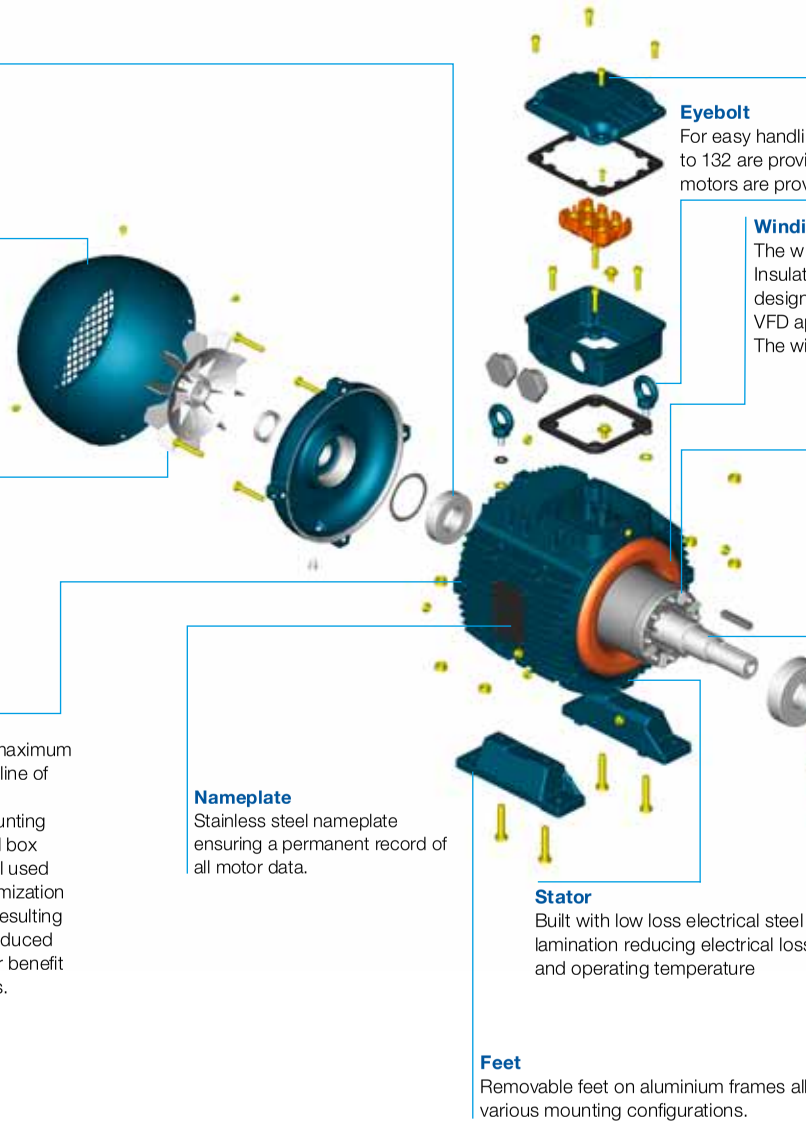
More options available, on request.

Bearings
All 3000rpm and 1500rpm motors are supplied with ball bearings as standard. The bearings are designed to ensure long life of the motor, even under heavy operating conditions.

Fan cover
Steel fan covers for 63 up to 132M frames.

Fan
Made of rigid plastic. Non sparking, non toxic, resistant to environmental conditions, and ensures low noise operation.

Frame
Made of Aluminium with external fins for maximum cooling effect and minimum weight. This line of product is defined as a modern and easy assembly system, allowing change of mounting configuration including rotation of terminal box and/or removal of feet. Due to the material used on the frame construction there is an optimization of the electrical and mechanical designs resulting in an improved efficiency of the set and reduced weight. Resistance to corrosion is another benefit making it suitable for severe environments.



Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Feet
Removable feet on aluminium frames allow various mounting configurations.

Stator
Built with low loss electrical steel lamination reducing electrical losses and operating temperature

Terminal Box
Made of cast iron with plenty of internal space, the teminal box can be rotated at 90º intervals, having one or two threaded holes to connect power supply cables.
* Available as top or side mounted.

Eyebolt
For easy handling, motors in frames 63, up to 132 are provided with an eyebolt. Footless motors are provided with two eyebolts.

Winding
The wire is enameled with class H Varnish Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to aperating in environments with excess of moisture and suitable for VFD application.
The winding is designed to obtain the minimal Joule losses and temperature rise.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.
Built with premium electrical grade steel lamination to improve efficiency.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime performance. Specially designed to withstand torques caused during motor acceleration and deceleration.
Upon special design, shaft can have second end.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Drain plugs
Provided with automatic non-corrosive drain plug that quickly drains condensation.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Aluminium Frame Motors
Top Premium Efficiency Exceeds EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 4 up to 9.2kW
- Frames: 112 up to 132M
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Color: RAL 6021

Typical Applications:

- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.

Options Available:

- Non-drive end shaft
- Bearing sealing
- Shaft dimensions to customer requirements
- Canopy for V1 applications
- Special painting
- Space heaters
- Thermal protection (thermistors)
- Class “H” insulation
- Other mounting configurations
- Other modifications, on request

More options available, on request

Bearings
All 3000rpm and 1500rpm motors are supplied with ball bearings as standard. The bearings are designed to ensure long life of the motor, even under heavy operating conditions.

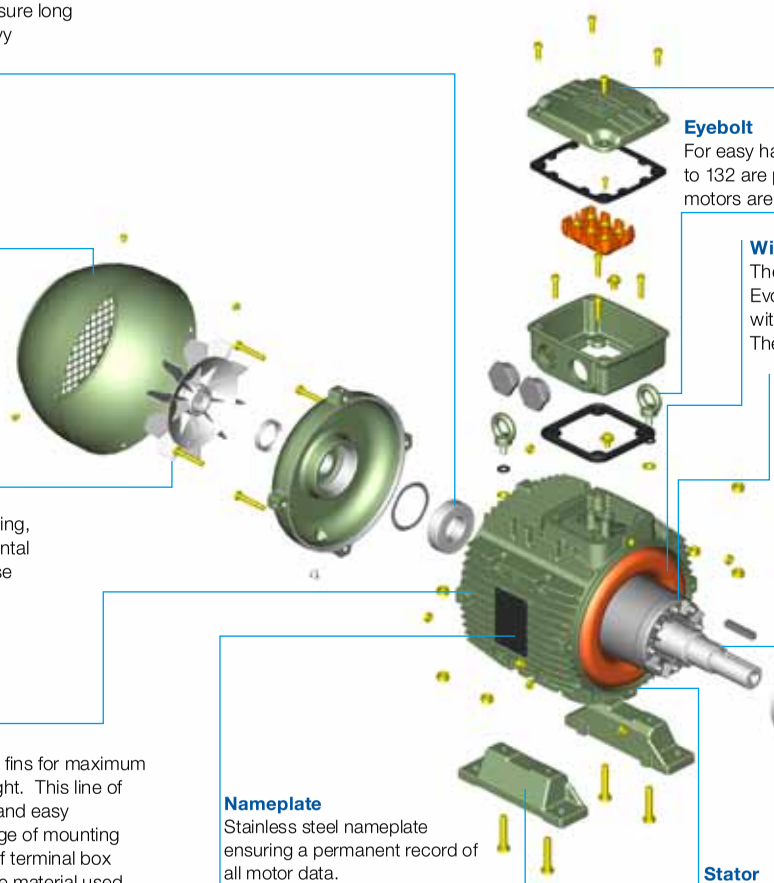
Fan cover
Steel fan covers for 112 up to 132M frames.

Fan
Made of rigid plastic. Non sparking, non toxic, resistant to environmental conditions, and ensures low noise operation.

Frame
Made of Aluminium with external fins for maximum cooling effect and minimum weight. This line of product is defined as a modern and easy assembly system, allowing change of mounting configuration including rotation of terminal box and/or removal of feet. Due to the material used on the frame construction there is an optimization of the electrical and mechanical designs resulting in an improved efficiency of the set and reduced weight. Resistance to corrosion is another benefit making it suitable for severe environments.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Feet
Removable feet on aluminium frames allow various mounting configurations.



Terminal Box
Made of cast iron with plenty of internal space, the teminal box can be rotated at 90º intervals, having one or two threaded holes to connect power supply cables.
* Available as top or side mounted.

Eyebolt
For easy handling, motors in frames 112 up to 132 are provided with an eyebolt. Footless motors are provided with two eyebolts.

Winding
The wire is enameled with class H Varnish Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to aperating in environments with excess of moisture and suitable for VFD application.
The winding is designed to obtain the minimal Joule losses and temperature rise.

Rotor
High-pressure die casting aluminium rotor dynamically balanced reducing vibration. The advantages of aluminum rotors are lower inertia, higher starting torque and higher mechanical stiffness, among others. The steel laminations are thermo chemically treated to improve efficiency and minimize mechanical stress.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime performance. Specially designed to withstand torques caused during motor acceleration and deceleration. Upon special design, shaft can have second end.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Stator
The stator is built with highest quality of steel lamination and it is thermally and chemically treated to reduce electrical losses and operating temperature.
Guarantees high efficiency and extended motor lifetime.

Drain plugs
Provided with automatic non-corrosive drain plug that quickly drains condensation.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Brake Motors Cast Iron Frame Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 30kW
- Frames: 63 up to 200L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C , at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Ball bearings
- D.E.: V’Ring
- N.D.E.: Lip Seal
- Stainless steel nameplate
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Color: RAL 5007

Options Available:

- Thermal protection
- Space heaters
- Shaft dimensions to customer requirements
- Special finishing paint
- Class “H” insulation
- Other mounting configurations

More options available, on request

Typical Applications:

These motors can be used on any machine that requires quick stops and time savings during installation:

- Packing equipments
- Conveyor belts
- Washing and bottling machines
- Rolling bridges
- Elevators
- Printing machines
- Gates
- Wood machinery
- Cranes and others

Fan Cover
Made of steel plate for frames 63 up to 200L. The fan cover offers higher mechanical strength, corrosion-resistance and extended lifetime. With a design incorporating the braking system it is suitable for operation in severe environments. In addition, it offers quality and performance requirements of the motors such as noise level.

Brake
The electromagnetic brake is built of sturdy construction offering high performance for its low number of movable components and versatility on the application, resulting in extended lifetime and low maintenance. The possibility of having several torques and several power supply voltages makes this set a versatile component.

Fan
WEG has designed the fan having in mind the lowest noise level.
The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. Fan is designed with special materials to ensure suitable motor performance in reference to noise level and cooling. The W21 range is supplied with anti-static polypropylene fans from 63 up to 200 frames. Alternatively, aluminium fans can be supplied on request for all frames.

Non-Drive Endshield
The non-drive endshield was specially designed to be coupled to the braking set as well as to withstand high thrusts coming from this set.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aiming at improving the heat dissipation and properly spaced to minimize air blockage due to accumularion of dirt. The motors can be mounted in either horizontal or vertical positions.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Terminal Box
Cast iron made with plenty of internal space. The terminal box can be rotated in 90º intervals, having one or two threaded holes to connect the power supply cables. Suitable to take the additional connection of the brake as well as bridge rectifier which is fixed internally without affecting the motor degree of protection. Larger volumes compared to standard motor allow easier connection and disconnection operations of the power supply, bridge rectifier and protection leads.
* Available as top or side mounting.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.
WEG also uses the Super-premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance and protection.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Stator
Built with low magnetic loss steel lamination to reduce losses and operating temperature.

Seals
WEG motors are fitted with either V-ring seals, Oil seals, Lip seals and may also be fitted with Labyrinth Taconite or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Notes:
**Class "F" insulation with ΔT105K*
Standard voltage, connection and frequency: 220-240V Δ 50Hz
380-415V Y 50Hz
380-415V Δ 50Hz
660-690V Y 50Hz
The values shown are subject to change without prior notice. To obtain guaranteed values please access our website.

Brake Motors Cast Iron Frame - Improved Efficiency EFF2

Output		380 V								415 V

Brake Motors Cast Iron Frame Premium Efficiency EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 37kW
- Frames: 63 up to 200L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C , at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Ball bearings
- D.E.: V’Ring
- N.D.E.: Lip Seal
- Stainless steel nameplate
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Color: RAL 5009

Options Available:

- Thermal protection
- Space heaters
- Shaft dimensions to customer requirements
- Special finishing paint
- Class “H” insulation
- Other mounting configurations

More options available, on request

Typical Applications:

These motors can be used on any machine that requires quick stops and time savings during installation:

- Packing equipments
- Conveyor belts
- Washing and bottling machines
- Rolling bridges
- Elevators
- Printing machines
- Gates
- Wood machinery
- Cranes and others

Fan Cover
Made of steel plate for frames 63 up to 200L. The fan cover offers higher mechanical strength, corrosion-resistance and extended lifetime. With a design incorporating the braking system it is suitable for operation in severe environments. In addition, it offers quality and performance requirements of the motors such as noise level.

Brake
The electromagnetic brake is built of sturdy construction offering high performance for its low number of movable components and versatility on the application, resulting in extended lifetime and low maintenance. The possibility of having several torques and several power supply voltages makes this set a versatile component.

Terminal Box
Cast iron made with plenty of internal space. The terminal box can be rotated in 90º intervals, having one or two threaded holes to connect the power supply cables. Suitable to take the additional connection of the brake as well as bridge rectifier which is fixed internally without affecting the motor degree of protection. Larger volumes compared to standard motor allow easier connection and disconnection operations of the power supply, bridge rectifier and protection leads.
* Available as top or side mounting.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Fan
WEG has designed the fan having in mind the lowest noise level.
The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. Fan is designed with special materials to ensure suitable motor performance in reference to noise level and cooling. The W21 range is supplied with anti-static polypropylene fans from 63 up to 200 frames. Alternatively, aluminium fans can be supplied on request for all frames.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.
WEG also uses the Super-premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance and protection.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Non-Drive Endshield
The non-drive endshield was specially designed to be coupled to the braking set as well as to withstand high thrusts coming from this set.

Stator
Built with low magnetic loss steel lamination to reduce losses and operating temperature.

Seals
WEG motors are fitted with either V-ring seals, Oil seals, Lip seals and may also be fitted with Labyrinth Taconite or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aiming at improving the heat dissipation and properly spaced to minimize air blockage due to accumularion of dirt. The motors can be mounted in either horizontal or vertical positions.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Brake Motors Cast Iron Frame
Top Premium Efficiency Exceeds EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 4 up to 37kW
- Frames: 112 up to 200L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C , at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Ball bearings
- D.E.: V’Ring
- N.D.E.: Lip Seal
- Stainless steel nameplate
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Color: RAL 6021

Options Available:

- Thermal protection
- Space heaters
- Shaft dimensions to customer requirements
- Special finishing paint
- Class “H” insulation
- Other mounting configurations

More options available, on request

Typical Applications:

These motors can be used on any machine that requires quick stops and time savings during installation:

- Packing equipments
- Conveyor belts
- Washing and bottling machines
- Rolling bridges
- Elevators
- Printing machines
- Gates
- Wood machinery
- Cranes and others

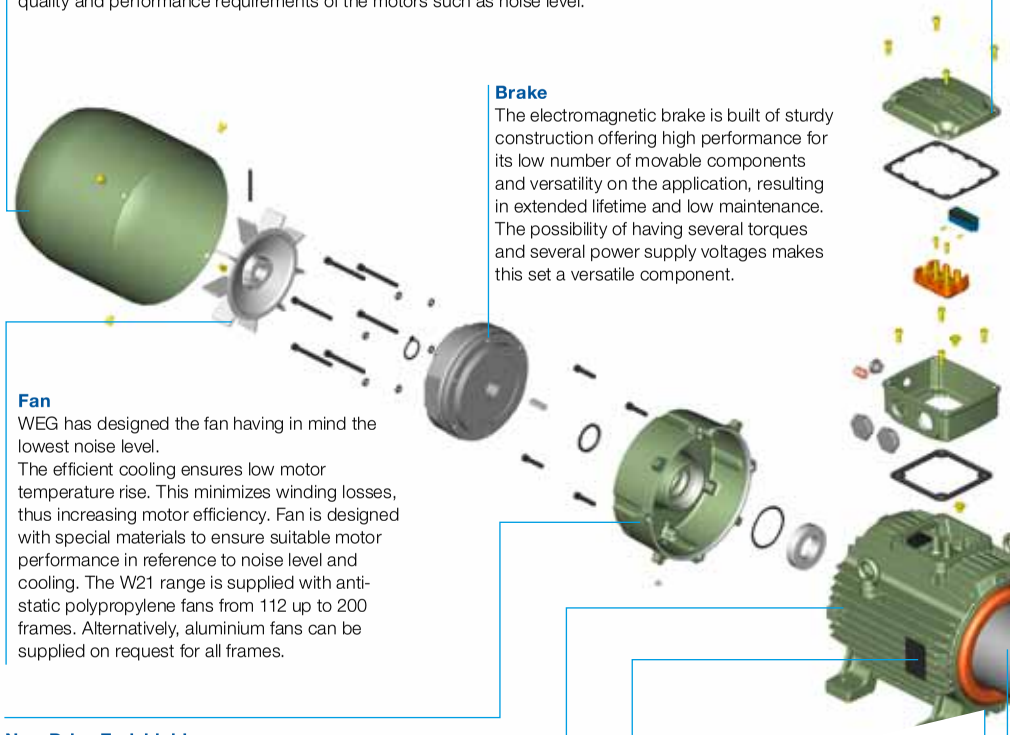
Fan Cover
Made of steel plate for frames 112 up to 200L. The fan cover offers higher mechanical strength, corrosion-resistance and extended lifetime. With a design incorporating the braking system it is suitable for operation in severe environments. In addition, it offers quality and performance requirements of the motors such as noise level.

Brake
The electromagnetic brake is built of sturdy construction offering high performance for its low number of movable components and versatility on the application, resulting in extended lifetime and low maintenance. The possibility of having several torques and several power supply voltages makes this set a versatile component.

Fan
WEG has designed the fan having in mind the lowest noise level.
The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. Fan is designed with special materials to ensure suitable motor performance in reference to noise level and cooling. The W21 range is supplied with anti-static polypropylene fans from 112 up to 200 frames. Alternatively, aluminium fans can be supplied on request for all frames.

Non-Drive Endshield
The non-drive endshield was specially designed to be coupled to the braking set as well as to withstand high thrusts coming from this set.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aiming at improving the heat dissipation and properly spaced to minimize air blockage due to accumularion of dirt. The motors can be mounted in either horizontal or vertical positions.



Terminal Box
Cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Suitable to take the additional connection of the brake as well as bridge rectifier which is fixed internally without affecting the motor degree of protection. Larger volumes compared to standard motor allow easier connection and disconnection operations of the power supply, bridge rectifier and protection leads.
* Available as top or side mounting.

Winding
The wire is enameled with class H Varnish and are impregnated with dipping and baking process (frames 112 up to 200L). Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.
WEG also uses the Super-premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance and protection.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Stator
The stator is built with highest quality of steel lamination and it is thermally and chemically treated to reduce electrical losses and operating temperature. Guarantees high efficiency and extended motor lifetime.

Rotor
High-pressure die casting aluminium rotor dynamically balanced reducing vibration. Advantages of aluminum rotors include lower inertia, higher starting torque and higher mechanical stiffness, among others. The steel laminations are thermally and chemically treated to improve efficiency and minimize mechanical stress.

Seals
WEG motors are fitted with either V-ring seals, Oil seals, Lip seals and may also be fitted with Labyrinth Taconite or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Brake Motors Aluminium Frame Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 11kW
- Frames: 63 up to 132M
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C , at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Ball bearings
- D.E.: V’Ring
- N.D.E.: Lip Seal
- Stainless steel nameplate
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Color: RAL 5007

Options Available:

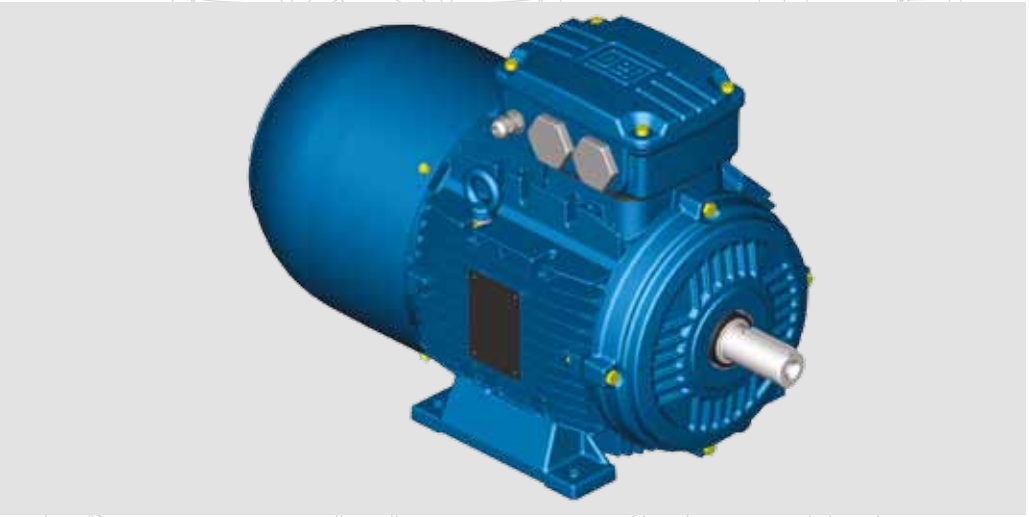
- Thermal protection
- Space heaters
- Shaft dimensions to customer requirements
- Special finishing paint
- Class “H” insulation
- Other mounting configurations

More options available, on request

Typical Applications:

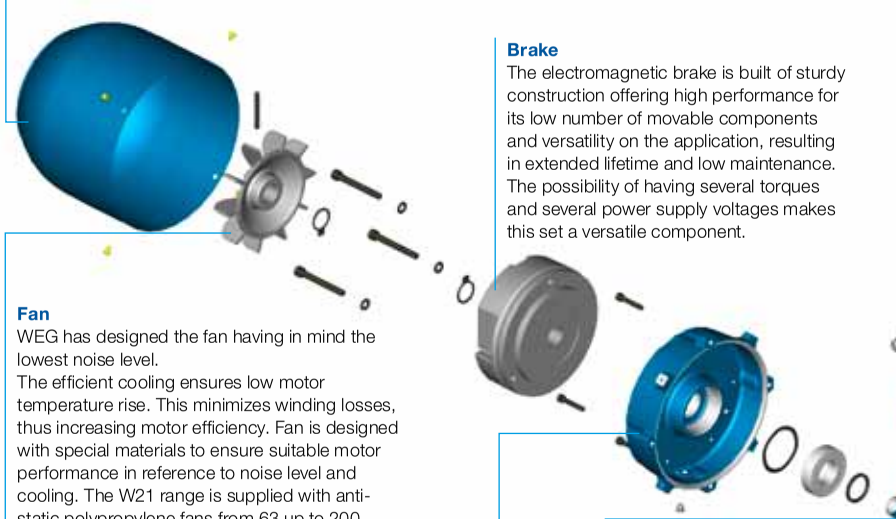
These motors can be used on any machine that requires quick stops and time savings during installation:

- Packing equipments
- Conveyor belts
- Washing and bottling machines
- Rolling bridges
- Elevators
- Printing machines
- Gates
- Wood machinery
- Cranes and others



Fan Cover
Made of steel plate for frames 63 up to 132M. The fan cover offers higher mechanical strength, corrosion-resistance and extended lifetime. With a design incorporating the braking system it is suitable for operation in severe environments. In addition, it offers quality and performance requirements of the motors such as noise level.

Terminal Box
Cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Suitable to take the additional connection of the brake as well as bridge rectifier which is fixed internally without affecting the motor degree of protection. Larger volumes compared to standard motor allow easier connection and disconnection operations of the power supply, bridge rectifier and protection leads.
* Available as top or side mounting.



Brake
The electromagnetic brake is built of sturdy construction offering high performance for its low number of movable components and versatility on the application, resulting in extended lifetime and low maintenance. The possibility of having several torques and several power supply voltages makes this set a versatile component.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Fan
WEG has designed the fan having in mind the lowest noise level.
The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. Fan is designed with special materials to ensure suitable motor performance in reference to noise level and cooling. The W21 range is supplied with anti-static polypropylene fans from 63 up to 200 frames. Alternatively, aluminium fans can be supplied on request for all frames.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.
WEG also uses the Super-premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance and protection.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Non-Drive Endshield
The non-drive endshield was specially designed to be coupled to the braking set as well as to withstand high thrusts coming from this set.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Seals
WEG motors are fitted with either V-ring seals, Oil seals, Lip seals and may also be fitted with Labyrinth Taconite or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Stator
Built with low magnetic loss steel lamination to reduce losses and operating temperature.

Frame
Made of Aluminium with external fins for maximum cooling effect and minimum weight. This line of product is defined as a modern and easy assembly system, allowing change of mounting configuration including rotation of terminal box and/or removal of feet. Due to the material used on the frame construction there is an optimization of the electrical and mechanical designs resulting in an improved efficiency of the set and reduced weight. Resistance to corrosion is another benefit making it suitable for severe environments.

Feet
Removable feet on aluminium frames allow various mounting configurations.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Brake Motors Aluminium Frame Premium Efficiency EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 9.2kW
- Frames: 63 up to 132M
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C , at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Ball bearings
- D.E.: V’Ring
- N.D.E.: Lip Seal
- Stainless steel nameplate
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Color: RAL 5009

Options Available:

- Thermal protection
- Space heaters
- Shaft dimensions to customer requirements
- Special finishing paint
- Class “H” insulation
- Other mounting configurations

More options available, on request

Typical Applications:

These motors can be used on any machine that requires quick stops and time savings during installation:

- Packing equipments
- Conveyor belts
- Washing and bottling machines
- Rolling bridges
- Elevators
- Printing machines
- Gates
- Wood machinery
- Cranes and others

Fan Cover
Made of steel plate for frames 63 up to 132M. The fan cover offers higher mechanical strength, corrosion-resistance and extended lifetime. With a design incorporating the braking system it is suitable for operation in severe environments. In addition, it offers quality and performance requirements of the motors such as noise level.

Terminal Box
Cast iron made with plenty of internal space. The terminal box can be rotated in 90º intervals, having one or two threaded holes to connect the power supply cables. Suitable to take the additional connection of the brake as well as bridge rectifier which is fixed internally without affecting the motor degree of protection. Larger volumes compared to standard motor allow easier connection and disconnection operations of the power supply, bridge rectifier and protection leads.
* Available as top or side mounting.

Brake
The electromagnetic brake is built of sturdy construction offering high performance for its low number of movable components and versatility on the application, resulting in extended lifetime and low maintenance. The possibility of having several torques and several power supply voltages makes this set a versatile component.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Fan
WEG has designed the fan having in mind the lowest noise level.
The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. Fan is designed with special materials to ensure suitable motor performance in reference to noise level and cooling. The W21 range is supplied with anti-static polypropylene fans from 63 up to 200 frames. Alternatively, aluminium fans can be supplied on request for all frames.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.
WEG also uses the Super-premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance and protection.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Non-Drive Endshield
The non-drive endshield was specially designed to be coupled to the braking set as well as to withstand high thrusts coming from this set.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Seals
WEG motors are fitted with either V-ring seals, Oil seals, Lip seals and may also be fitted with Labyrinth Taconite or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Stator
Built with low magnetic loss steel lamination to reduce losses and operating temperature.

Frame
Made of Aluminium with external fins for maximum cooling effect and minimum weight. This line of product is defined as a modern and easy assembly system, allowing change of mounting configuration including rotation of terminal box and/or removal of feet. Due to the material used on the frame construction there is an optimization of the electrical and mechanical designs resulting in an improved efficiency of the set and reduced weight. Resistance to corrosion is another benefit making it suitable for severe environments.

Feet
Removable feet on aluminium frames allow various mounting configurations.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Permanent Magnet Motors Drive System - Cast Iron Frame

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 11 up to 160kW
- Frames: 132S up to 250S/M
- Voltage: 400V
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring on both endshields
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Regreasing nipple from frame 225S/M and above
- Metric threaded cable entries on the terminal box
- Thermistors (1 per phase) fitted in frame 160M and above
- Suitable for inverter duty applications
- Color: RAL 5007

Options Available:

- Mounting: B3, B5, B14, B34, V1, V5, etc
- Degree of Protection: IP56, IP65, IP66 or IPW
- Canopy
- Aluminium, Bronze or Cast Iron Fan
- Space Heaters

More options available, on request

Typical Applications:

Specially designed to operate in areas that require reduced vibrations and noise level, maximum efficiency in all speed variations and where the space is restricted:

- Pumps and Ventilation Systems
- Elevators
- Compressors
- Conveyor belts
- Others

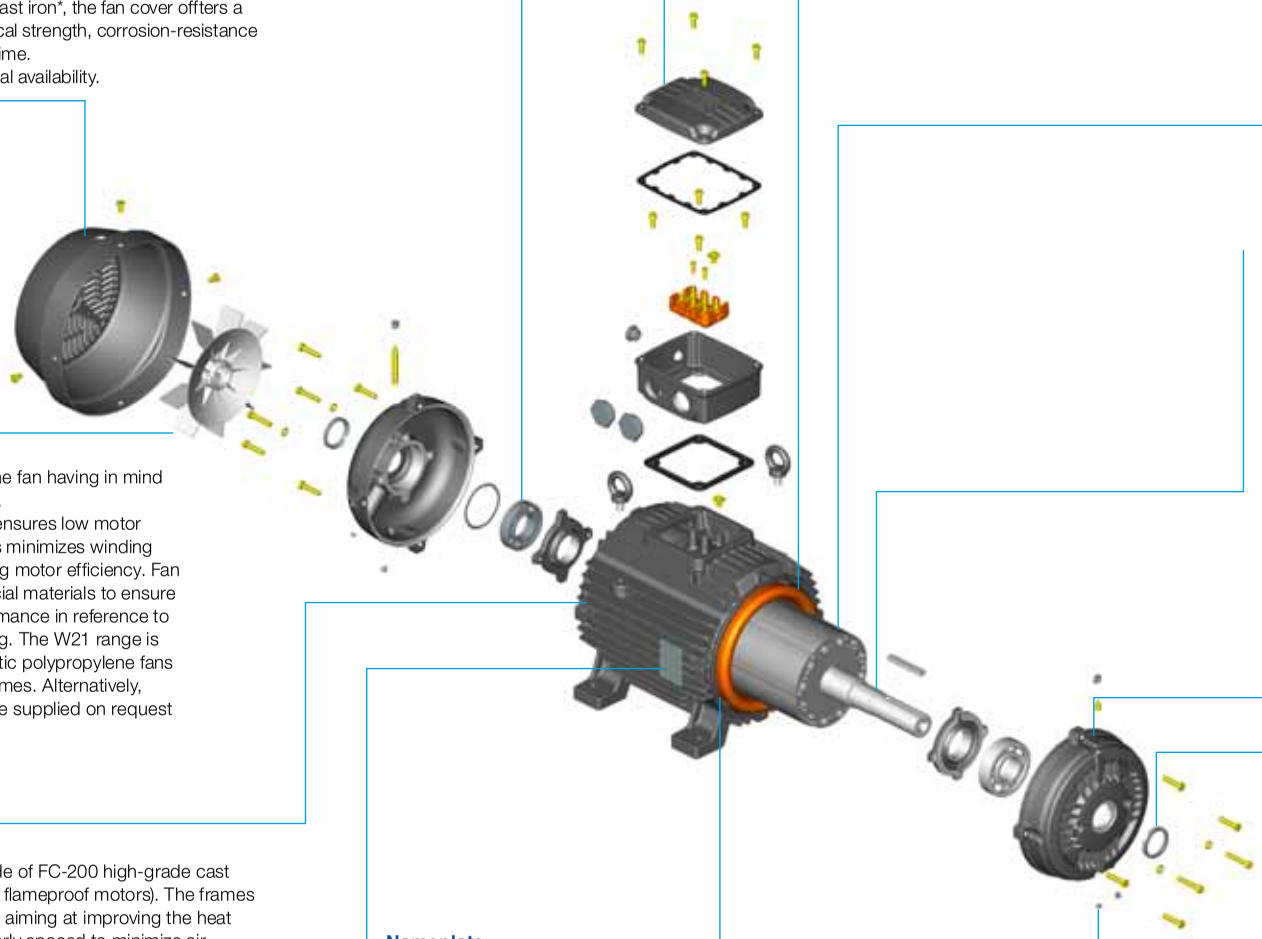
Bearings
WEG Permanent Magnet Motors are fitted with the highest quality bearings selected among the best manufactures in the world and designed to ensure long life to the motor even under heavy operating conditions.
* All Motors are supplied with grease nipples.

Terminal Box
Cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables.
* Available as top or side mounting.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application.
The winding is designed to obtain the minimal Joule losses and temperature rise.

Fan Cover
Made of steel or cast iron*, the fan cover offters a superior mechanical strength, corrosion-resistance and extended lifetime.
* Check for material availability.

Rotor
Wmagnet has high-energy magnets inside the rotor, in a configuration specially designed to minimize vibrations and noise and maximize efficiency in all speed variations.



Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration.

Fan
WEG has designed the fan having in mind the lowest noise level.
The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. Fan is designed with special materials to ensure suitable motor performance in reference to noise level and cooling. The W21 range is supplied with anti-static polypropylene fans from 63 up to 200 frames. Alternatively, aluminium fans can be supplied on request for all frames.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Seals
WEG motors are fitted with either V-ring seals, Oil seals, Lip seals and may also be fitted with Labyrinth Taconite or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aiming at improving the heat dissipation and properly spaced to minimize air blockage due to accumularion of dirt. The motors can be mounted in either horizontal or vertical positions.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Stator
Built with low magnetic loss steel lamination to reduce losses and operating temperature.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Inverter Duty Motors Cast Iron Frame Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 355kW
- Frames: 63 up to 355M/L for IDM self ventilated (according to W21 line)
  90S up to 355M/L for IDM forced ventilation-with or without encoder 1)
- Voltage: Single-voltage-220/380V; 380/660V or 415
  Multivooltage-220-440/380-415V or 380-415/690V
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring on both endshields
- Regreasing nipple from frame 225S/M and above
- Metric threaded cable entries on the terminal box
- Thermistors (1 per phase) fitted in frame 160M and above
- Suitable for inverter duty applications
- Color: RAL 5009

1) Encoder type RI58-D from Hengstler or H535 from Dynapar (Hollow Shaft)

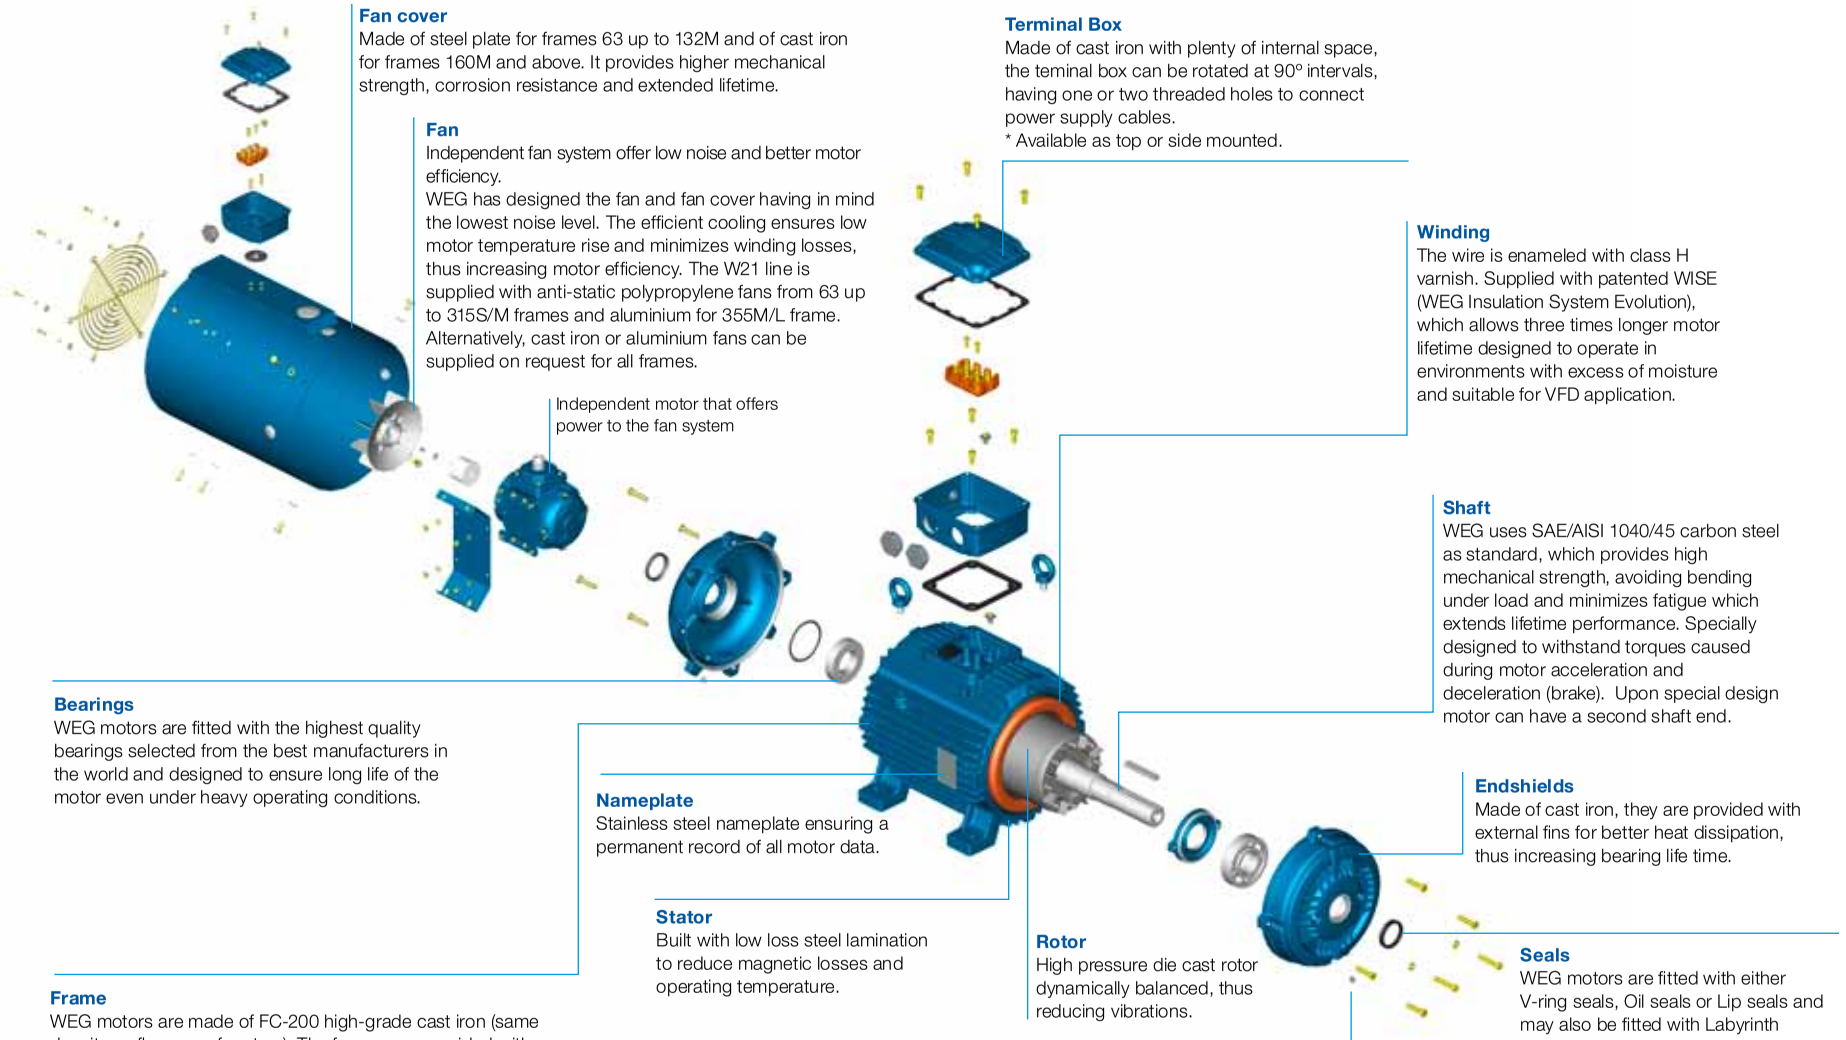
Options Available:

- Oil seal, lip seal or labyrinth tachonite for frame 90S and above
- Space heaters
- Class “H” insulation
- Special insulated bearings
- Thermistors (Alarm)
- IP56, IP65 and IP66 (W)
- Other mounting configuration, on request

More options available, on request

Typical Applications:

- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.



Fan cover
Made of steel plate for frames 63 up to 132M and of cast iron for frames 160M and above. It provides higher mechanical strength, corrosion resistance and extended lifetime.

Fan
Independent fan system offer low noise and better motor efficiency.
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise and minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 63 up to 315S/M frames and aluminium for 355M/L frame. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Independent motor that offers power to the fan system

Terminal Box
Made of cast iron with plenty of internal space, the teminal box can be rotated at 90° intervals, having one or two threaded holes to connect power supply cables.
* Available as top or side mounted.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime performance. Specially designed to withstand torques caused during motor acceleration and deceleration (brake). Upon special design motor can have a second shaft end.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Stator
Built with low loss steel lamination to reduce magnetic losses and operating temperature.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aimed at improving the heat dissipation and adequately spaced to minimize air blockage due to accumulation of dirt. The motors can be mounted in horizontal or vertical positions. Motor can be supplied with encoder which makes the drive + motor assembly suitable for applications when speed and positioning control are required. Standard encoder is H535, Dynapar, and 1024 pulses (other types of encoder can be adapted to the motor, upon request)

Notes:
** Shaft dimensions for II pole motors, only for direct coupling.*
*** For frame 100L, 3kW, 4 poles, Premium Efficiency Line, the L dimension is 420mm and LC dimension is 475mm.*
- All dimensions are in millimeters.
- Larger and smaller flanges on request.
- The data for frame 355M/L shown above are for horizontal mounting applications under standard coupling loads. The customer must inform when application is vertical or under special coupling loads.
- The values shown are subject to change without prior notice. To obtain guaranteed values please contact our nearest sales office.

** This data apply to Cast Iron Frame – Improved Efficiency - EFF2, Premium Efficiency - EFF1 and Top Premium Efficiency – Exceeds EFF1.*

Standard Frame

Three Phase ODP Motors
Cast Iron Frames
Improved Efficiency EFF2

Standard Features:

- Three phase, multivoltage, IP55
- Output: 11 up to 370kW
- Frames: 160M up to 280L
- Voltage: 380-415 / 660V
- Class “F” insulation (ΔT=80K)
- Squirrel cage rotor (Aluminium die cast)
- Dip and baked impregnation up to frame 200
- Resin continuous flow impregnation (frames 225S/M up to 280S/M)
- Enclosure: ODP (Open Drip Proof) – IP23
- Mounting: B3L (standard)
- Ball bearings
- Thermistor (225S/M up to 280S/M)
- Color: RAL 5007

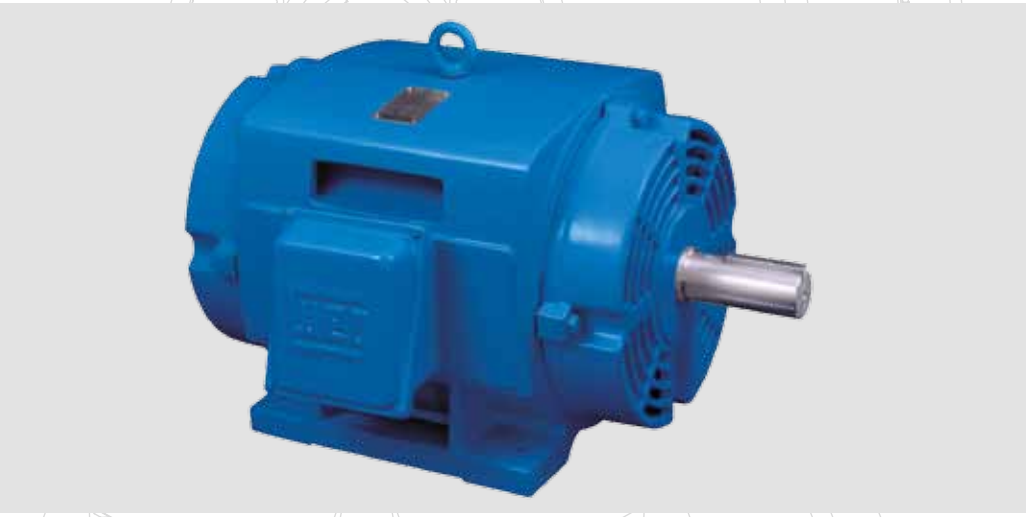
Typical Applications:

- Pumps
- Fans
- Kneader and mixer machines
- Cutting and sawing machines
- Pressing machines
- Industrial equipment
- Conveyor belts
- Blowers
- Compressors
- Cranes
- Packaging equipment
- Other severe duty applications

Options Available:

- Cable glands
- Class “H” insulation
- Second shaft end
- Thermistors, thermostats or PT100
- Roller bearings on drive endshields.

More options available, on request



Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions. WEG also uses the Super-Premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance, protection and longer motor lifetime.

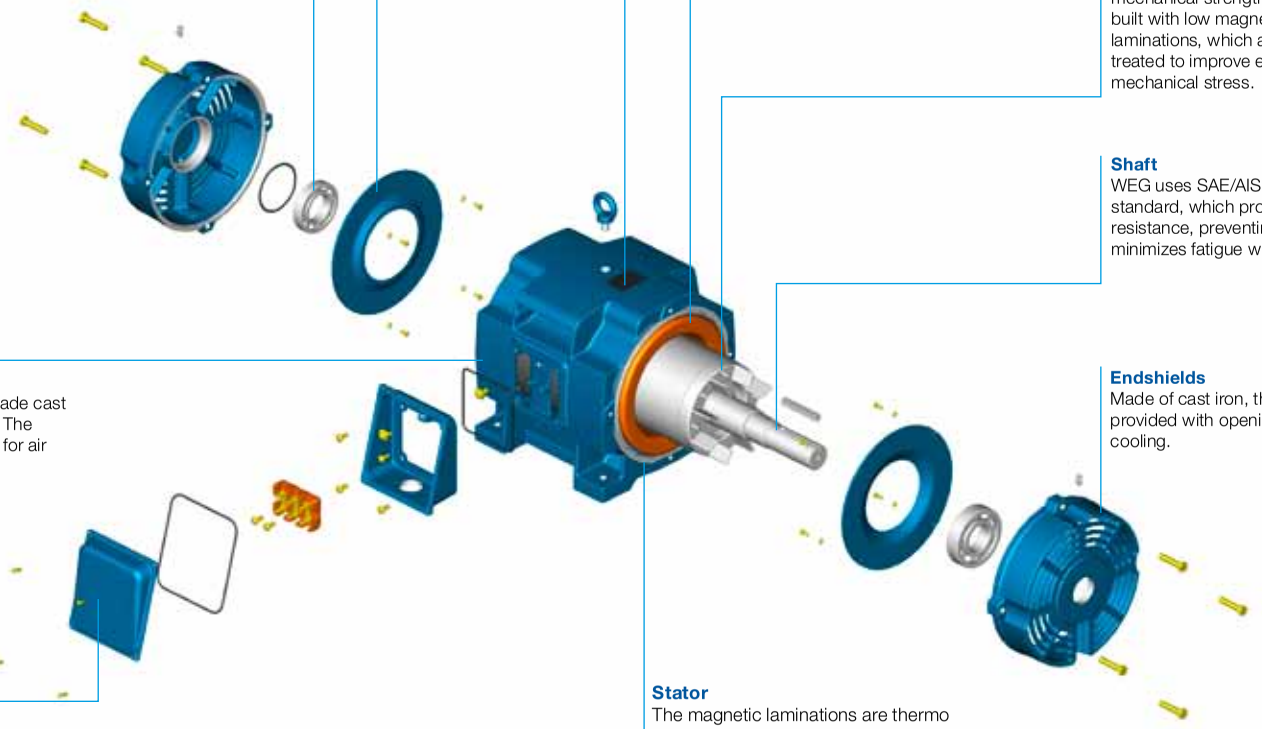
Internal Air Deflactor
Made of steel plate or cast iron and designed to direct air for improved heat dissipation.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Winding
The wire is enameled with class H and are impregnated with dip and baked process (frames 160 up to 200L) and continuous resin flow process (frames 225S/M up to 280S/M). Supplied with reinforced insulation system as standard.

Rotor
The advantages of aluminium rotors are lower inertia, higher starting torque and higher mechanical strength, from others. They are built with low magnetic losses steel laminations, which are thermo chemically treated to improve efficiency and minimize mechanical stress.

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical resistance, preventing bending under load and minimizes fatigue which extends lifetime.



Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with lateral openings for air outflow.

Endshields
Made of cast iron, they are provided with openings for motor cooling.

Terminal Box
Made of cast iron with plenty of internal space, the terminal box can be rotated at 90° intervals, having one or two threaded holes to connect the power supply cables.

Stator
The magnetic laminations are thermo chemically treated to improve electric characteristics, thus reducing magnetic losses and operating temperature.

1 - Optional second shaft end
2 - Dimensions subject to changes without prior notice
3 - Frame 280 and 315 cast iron - Frame 355 steel
4 - Bearings designed for direct coupling
5 - Dimensions AE for motors with auxiliary terminal box
6 - Mechanical dimensions are given in milimeters

Single Phase Cast Iron Frame Motors Improved Efficiency EFF2

Standard Features:

- Single-phase, IP55
- Output: 0.25 up to 7.5kW
- Frames: 71 up to 132M
- Voltage: 220 / 440V
- Class “F” insulation (ΔT=80K)
- Squirrel cage rotor / Aluminium die cast
- Continuous duty: S1
- Design N
- V’Ring on both endshields
- Stainless steel nameplate AISI 316
- Run and start capacitor
- ZZ ball bearings
- 1045 carbon steel shaft
- Color: RAL 5007

Options Available:

- Class “H” Insulation
- Special Voltages
- Specially designed shaft
- Second shaft end
- Drip cover (canopy) for shaft down application
- Thermistors and Thermostats
- Stainless steel shaft
- Flange mounting

Typical Applications:

- Pumps
- Fans
- Compressors
- Pulleys
- Cranes
- Conveyor belts
- Silo unloaders
- Grinders
- Other general application machines

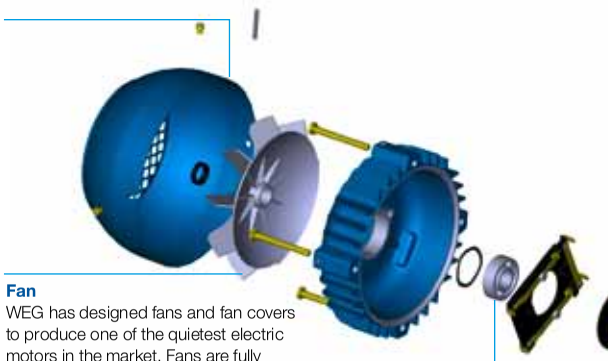
Thermal Protection
Motor is equipped with manual thermal protection against overloads, on request

Fan Cover
Made of steel plate for frames 71 up to 132M frames. It provides higher mechanical strength, corrosion resistance and extended lifetime.

Centrifugal Switch
The centrifugal switch has special helicoidal steel springs, controlled by calibrated counter-weights, assembled on a rigid base. Its fast action helps to increase contacts life avoiding sparks and erosion

Terminal Box
Made of cast iron with plenty of internal space, the teminal box can be rotated at 90° intervals, having one or two threaded holes to connect power supply cables.
* Available as top or side mounted.

Winding
The wire is enameled with class H Varnish and are impregnated with dipping and baking process (frames 71 up to 200L).
Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.



Fan
WEG has designed fans and fan covers to produce one of the quietest electric motors in the market. Fans are fully interchangeable and efficient cooling ensures low motor temperature rise, this minimizes winding losses, thus increasing motor efficiency.

Rotor
High-pressure die casting aluminium rotor dynamically balanced reducing vibration. Advantages of aluminum rotors include lower inertia, higher starting torque and higher mechanical stiffness, among others. The steel laminations are thermally and chemically treated to improve efficiency and minimize mechanical stress.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, avoiding bending under load and minimizes fatigue which extends lifetime performance. Specially designed to withstand torques caused during motor acceleration and deceleration (brake). Upon special design motor can have a second shaft end.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life time.

Bearings
WEG motors are fitted with the highest quality bearings selected among the best manufacturers in the world and designed to ensure long life to the motor even under heavy operating conditions. WEG also uses the Super-premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation and proprietary manufacturing techniques provide low noise characteristics, improved bearing performance and protection.

Stator
The stator is built with highest quality of steel lamination and it is thermally and chemically treated to reduce electrical losses and operating temperature. Guarantees high efficiency and extended motor lifetime.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aimed at improving the heat dissipation and adequately spaced to minimize air blockage due to accumulation of dirt. The motors can be mounted in horizontal or vertical positions.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Single Phase Multi-Mounting Motors Aluminium Frame Improved Efficiency EFF2

Standard Features:

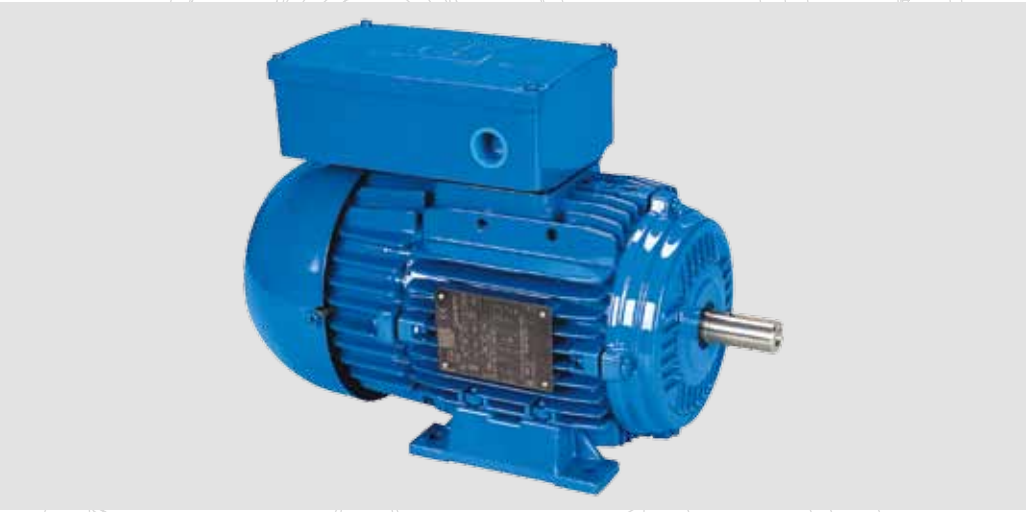
- Single-phase, IP55
- Output: 0.25 up to 7.5kW
- Frames: 71 up to 132S
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Run and start capacitor
- ZZ ball bearings
- 1045 carbon steel shaft
- Plastic T-box
- Lip seal
- Color: RAL 5007

Options Available:

- Cable glands
- Specially designed shaft
- Second shaft end
- Stainless steel shaft
- Flange mounting
- Other mounting configurations and other cables entry positions

Typical Applications:

- Pumps
- Fans
- Compressors
- Pulleys
- Cranes
- Continuous conveyors
- Grinders
- Other general application machines



Terminal Box
Top mounted. Box and cover are mold injected in poliamide (nylon) in order to lower weight without losing mechanical and impact strength.

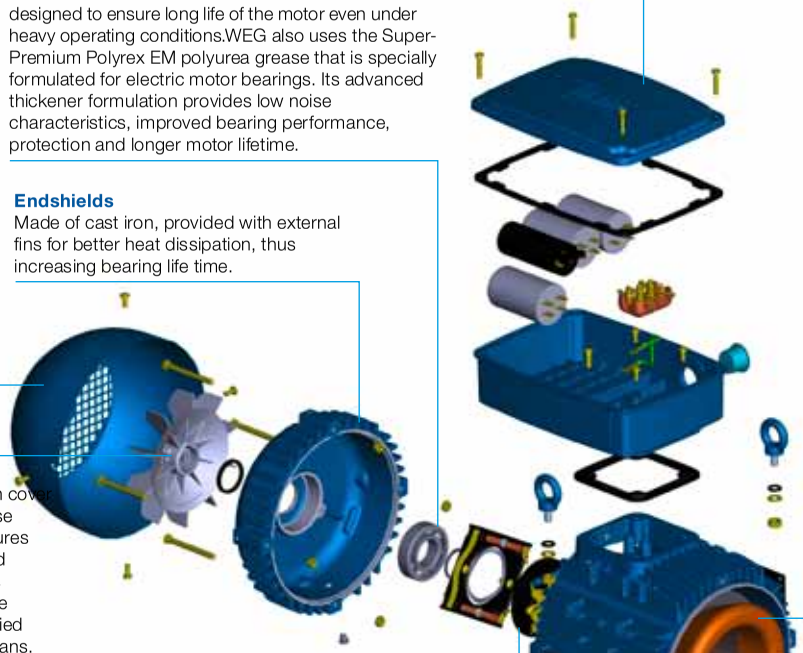
Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.WEG also uses the Super-Premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance, protection and longer motor lifetime.

Winding
The copper wire is class “H” enameled as standard and the windings are impregnated with solvent free polyester resin in a dip and baked process. All these features provide high dielectric and mechanical strength and longer life to the windings.

Endshields
Made of cast iron, provided with external fins for better heat dissipation, thus increasing bearing life time.

Fan Cover
Made of steel plate for frames 71 up to 132M. It offers a superior mechanical strength, corrosion-resistance and extended lifetime.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.



Shaft
WEG uses SAE/AISI 1045 carbon steel as standard providing high mechanical strength, minimizing bending under load and fatigue. Stainless steel can be supplied as optional.

Fan
WEG has designed fan and fan cover bearing in mind the lowest noise level. The efficient cooling ensures low motor temperature rise and minimizes winding losses, thus increasing motor efficiency. The Single Phase Motors are supplied with anti-static polypropylene fans.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life.

Centrifugal Switch
The centrifugal switch has special helicoidal steel springs, controlled by calibrated counter-weights, assembled on a rigid base. Its fast operation helps to increase contacts life avoiding sparks and erosion.

Seals
WEG motors are fitted with either V-ring seals, Oil seals or Lip seals and may also be fitted with Labyrinth Taconite seals or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Frame
Made of aluminium with external fins for maximum cooling effect and low weight.

Stator
Built with low magnetic loss steel laminations, which are thermo chemically treated to improve efficiency and minimize mechanical stress.

Feet
Removable feet on aluminium frames allow mounting configuration in all positions.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Drain Hole
Provided with automatic plastic drain plug allowing drainage of condensed water.

Fan and Exhaust Application Motors Cast Iron Frame Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.06 up to 355kW
- Frames: 63 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V´ring seals
  - Lip seal (225 and above)
  - Grease nipple system in frame 225S/M and above
- Stainless steel nameplate AISI 316
- Regreasing nipple from frame 225S/M and above
- Metric threaded cable entries on the terminal box
- Thermistors (1 per phase) fitted in frame 160M and above
- Suitable for inverter duty applications
- Single-speed, two speed Dahlander constant and variable torque, two-speed independent winding (VI/IV constant and variable torque) or triple rated (VIII/VI/IV and XII/VI/IV)
- Metric threaded cable entries
- 1 meter long flying leads for pad mounted motors (without terminal box)
- Color - RAL 5007

Options available, on request.

Typical Applications:

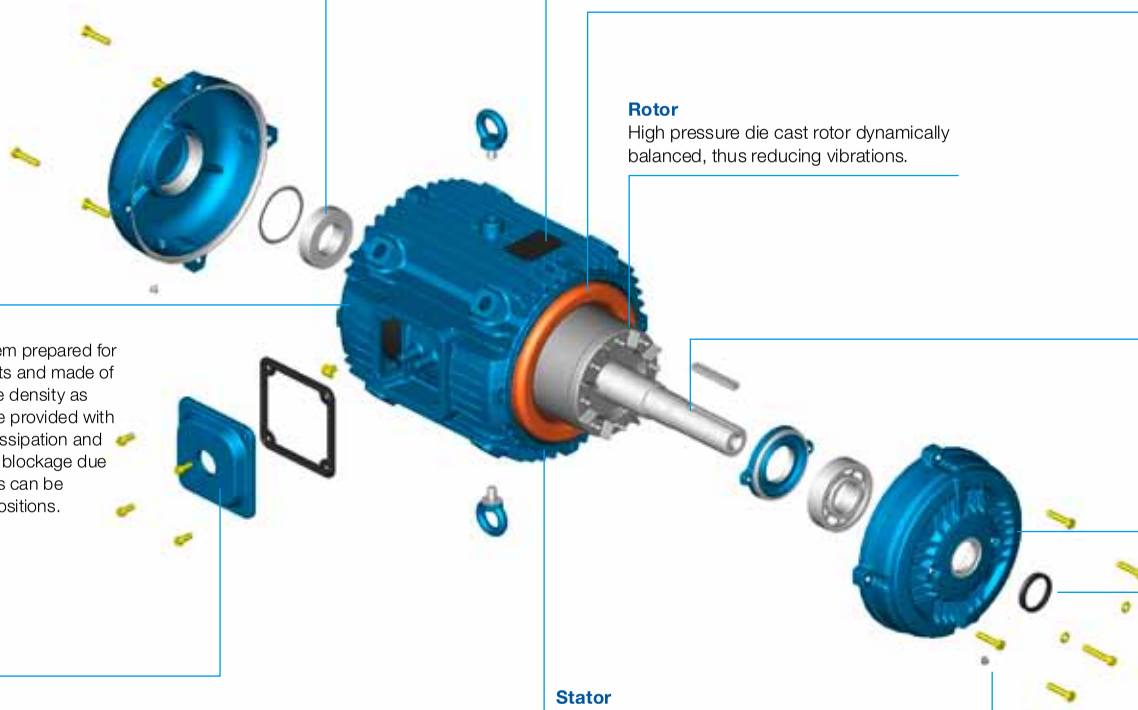
These motors are designed specially for axial fan manufacturers. The design allows high output in light and compact frame sizes for the following applications:

- Fan and exhausters
- Tunnels
- Subways
- Air conditioning systems
- Underground coal mines
- Shopping centers
- Supermarkets
- Other applications

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy working conditions.
WEG also uses the Super-Premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance and protection.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application.



Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. Upon special design, motor shaft can have second shaft end.

Frame
Frame with special assembly system prepared for direct installation in ventilation ducts and made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aimed at improving the heat dissipation and adequately spaced to minimize air blockage due to accumulation of dirt. The motors can be mounted in horizontal or vertical positions.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life.

Seals
WEG motors are fitted with either V-ring seals, Oil seals, Lip seals and may also be fitted with Labyrinth Taconite or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Terminal Box
Motor supplied with terminal box base and extended leads (1 meter) allowing lead connection outside of the duct. Loose terminal box and longer power supply leads can also be supplied.

Stator
Built with low magnetic loss steel lamination reducing losses and operating temperature.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Notes:
**Class "F" insulation with ΔT105K*
Standard voltage, connection and frequency: 220-240V Δ 50Hz
380-415V Y 50Hz
380-415V Δ 50Hz
660-690V Y 50Hz
The values shown are subject to change without prior notice. To obtain guaranteed values please access our website.

Notes:
**Class "F" insulation with ΔT105K*
Standard voltage, connection and frequency: 220-240V Δ 50Hz — 380-415V Δ 50Hz
380-415V Y 50Hz — 660-690V Y 50Hz
The values shown are subject to change without prior notice. To obtain guaranteed values please access our website.

Fan and Exhaust Application Motors Cast Iron Frame - Single Speed Improved Efficiency EFF2

Notes:
**Class "F" insulation with ΔT105K*
Standard voltage, connection and frequency: 220-240V Δ 50Hz 380-415V Δ 50Hz
380-415V Y 50Hz 660-690V Y 50Hz
The values shown are subject to change without prior notice. To obtain guaranteed values please access our website.

Fan and Exhaust Application Motors Aluminium Frame Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 9.2kW
- Frames: 63 up to 132M
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V´ring seals
- Metric threaded cable entries on the terminal box
- Suitable for inverter duty applications
- Single-speed (technical data for two speed and three speed available under request)
- Metric threaded cable entries
- 1 meter long flying leads for pad mounted motors (without terminal box)
- Color - RAL 5007

Options available, on request.

Typical Applications:

These motors are designed specially for axial fan manufacturers. The design allows high output in light and compact frame sizes for the following applications:

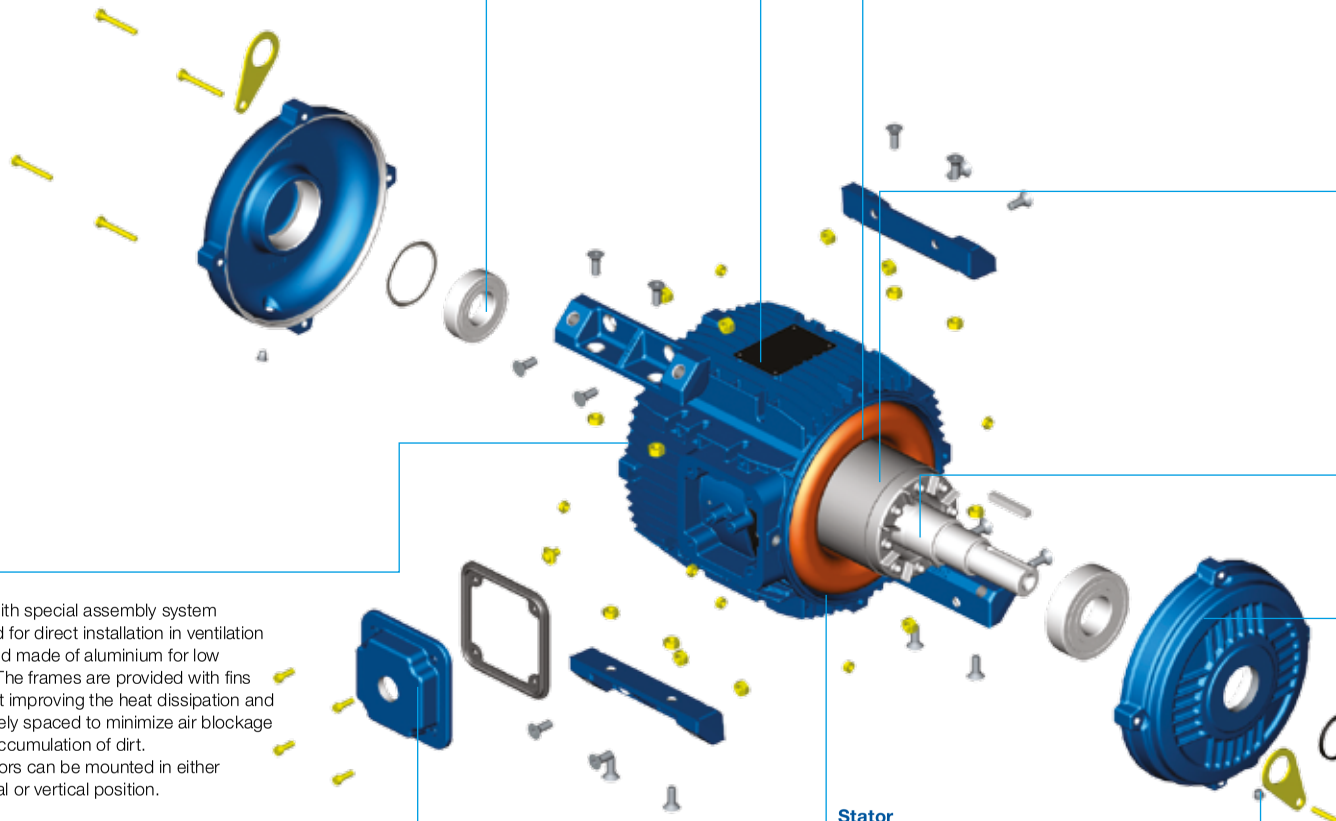
- Fan and exhausters
- Tunnels
- Subways
- Air conditioning systems
- Underground coal mines
- Shopping centers
- Supermarkets
- Other applications

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy working conditions.
WEG also uses the Super-Premium Polyrex EM polyurea grease that is specially formulated for electric motor bearings. Its advanced thickener formulation provides low noise characteristics, improved bearing performance and protection.

Nameplate
Stainless steel nameplate
ensuring a permanent record of all motor data.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application.

Rotor
The advantages of aluminium rotors are lower inertia, higher starting torque and higher mechanical stiffness, from others. They are built with low magnetic losses steel laminations, which are thermal and chemically treated to improve efficiency and minimize mechanical stress.



Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. Upon special design motor, shaft can have second shaft end.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life.

Frame
Frame with special assembly system prepared for direct installation in ventilation ducts and made of aluminium for low weight. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to accumulation of dirt.
The motors can be mounted in either horizontal or vertical position.

Seals
WEG motors are fitted with either V-ring seals, Oil seals, Lip seals and may also be fitted with Labyrinth Taconite or W3Seal to ensure the best possible protection under dusty and high moisture environments.

Stator
Built with low magnetic loss steel lamination reducing losses and operating temperature

Terminal Box
Motor supplied with terminal box base and extended leads (1 meter) allowing lead connection outside of the duct. Loose terminal box and longer power supply leads can also be supplied.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Smoke Extraction Motors Aluminium Frame Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.15 up to 330kW
- Frames: 80 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Enclosure: TEFC or TEAO
- Pad mounted model:
  frame sizes 80 up to 250 (132M/L and 180M are not available)
- Foot mounted model: frame sizes 80 up to 355
- Construction form: B3 (B30 for Pad Mounted Motors)
- Labyrinth seals (except 200°C/2 hours motors)
- Krytox (Except 200ºC/2 hours motor)
- Drain Plug
- One meter long flying leads for pad mounted motors (without terminal box)
- Regreasing Nipple for frame:
  160 and up (300ºC/1 hour and 400ºC/2 hours)
  225 and up (200ºC/2 hours
- Painting provided with modified Phenolic Resin
- Color - Aluminium

Options available, on request.

Typical Applications:

These motors are used where a large concentration of people in commercial and industrial facilities is present:

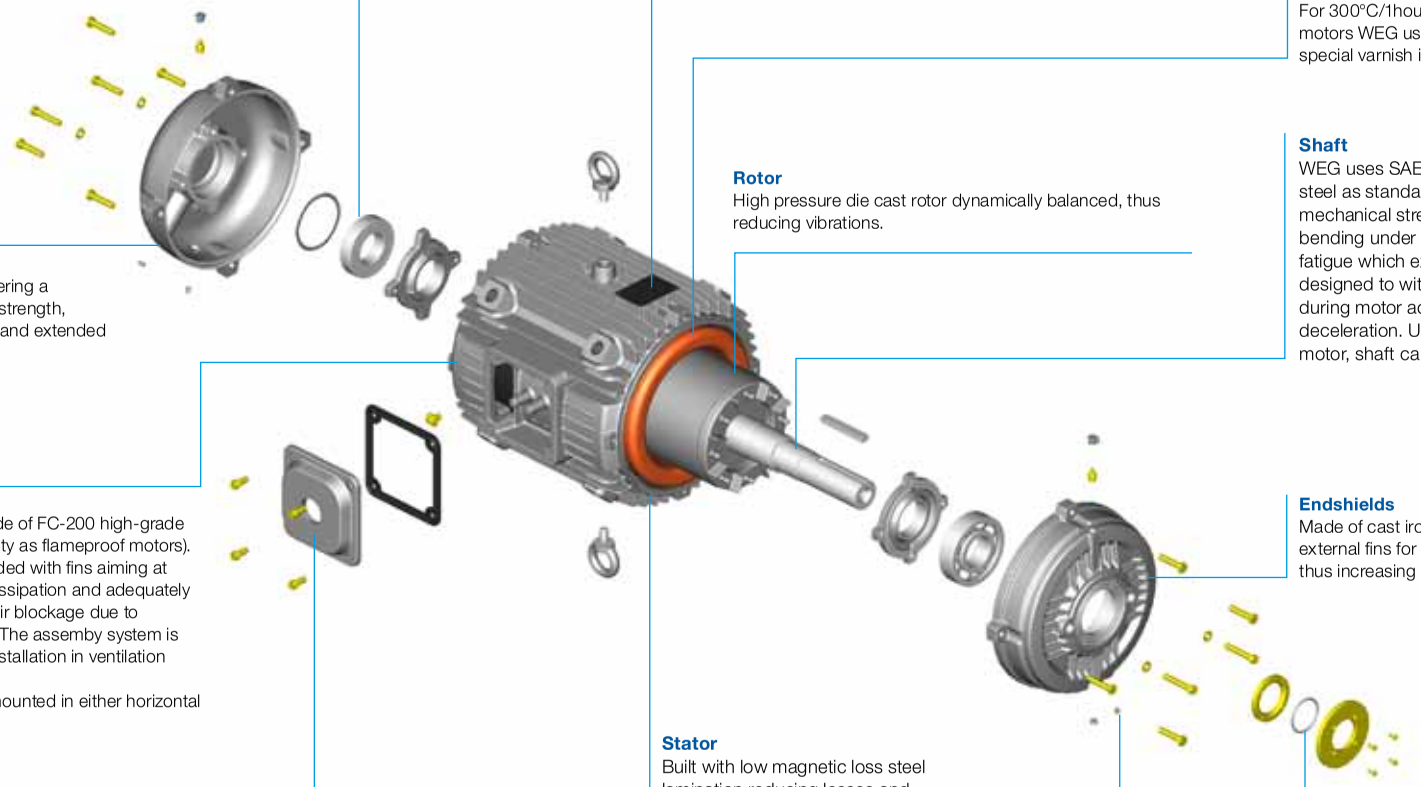
- Large buildings,
- Shopping malls,
- Factories,
- Warehouses,
- Enclosed parking lots
- Other ventilation systems

	F200	F300	F400
Service	S1 - 40ºC	S1 - 40ºC	S1 - 40ºC
	S2* - 200ºC - 2 hours	S2* - 300ºC - 1 hour	S2* - 400ºC - 2 hours
Certification	BSRIA - U.K. Frames: 132 to 280	BSRIA - U.K. Frames: 80 to 250 Also avaiable certification for 300º C/2 hours	BSRIA - U.K. Frames: 80 to 180
			CTICM - France Frames: 90 to 280
			Pole: IV, VI, VIII, VI/IV, VII/Vpoles
Insulation Class	Ins. Class F; Temp. Rise 80K	Ins. Class H; Temp. Rise 80K or 105K	
Standard	EM 12101-3		
Pole / Frame Sizes	II, IV/II pole (frame sizes 80 up to 250)		
available	IV, VI, VIII/IV, VI/IV pole (frame sizes 80 up to 355M/L)		
Construction	TEFC or TEAO (Foot or flange mounted / pad mounted for frame sizes 80 up to 250)		

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions. For motors supplied with high temperature grease, bearings are designed to meet critical operating conditions. WEG uses Krytox Grease that provides protection from rusting, high-temperature corrosion and antiwear. Krytox allows extended lubrication intervals.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Winding
The insulation system of the winding has been specially selected and tested to ensure that it will withstand the extreme temperature during the emergency period. The windings are impregnated with dipping and baking process (frames 80 up to 200L) and continuous resin flow process (frames 225S/M up to 355M/L). For 300°C/1hour and 400°C/2 hours motors WEG uses special wire and special varnish impregnation.



Endshield
Made of cast iron offering a superior mechanical strength, corrosion-resistance and extended lifetime.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations.

Shaft
WEG uses SAE/AISI 1040/45 carbon steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. Upon special design motor, shaft can have second shaft end.

Frame
WEG motors are made of FC-200 high-grade cast iron (same density as flameproof motors). The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to accumulation of dirt. The assemby system is prepared for direct installation in ventilation ducts.
The motors can be mounted in either horizontal or vertical positions.

Endshields
Made of cast iron, they are provided with external fins for better heat dissipation, thus increasing bearing life.

Stator
Built with low magnetic loss steel lamination reducing losses and operating temperature.

Seals
WEG motors (300°C/2 hours and 400°C/2 hours) are fitted with Taconite Labyrinth seals to provide a good protection in dusty and high moisture environments.

Terminal Box
Motor supplied with terminal box base and extended leads (1 meter) allowing lead connection outside of the duct. Loose terminal box and longer power supply leads can also be supplied.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Smoke Extraction Motors Aluminium Frame - Single Speed - 200^{0}C/2 hours

Notes:
**Class "F" insulation with ΔT105K*
Standard voltage, connection and frequency: 220-240V Δ 50Hz — 380-415V Δ 50Hz
380-415V Y 50Hz — 660-690V Y 50Hz
The values shown are subject to change without prior notice. To obtain guaranteed values please access our website.

Smoke Extraction Motors Aluminium Frame - Single Speed - 300^{0}C/1 hour Improved Efficiency EFF2

Low Voltage
Hazardous Area Motors

1 EXPLOSIVE ATMOSPHERE

An atmosphere is considered as explosive when the amount of gas, vapor, dust or fibers is such that a spark originated from an electric circuit or an overheating from an equipment may cause an explosion.
In reference to surrounding equipment, preventive construction measures are taken so as to avoid that the area around them is flamed.

2 EUROPEAN STANDARDS FOR EXPLOSIVE ATMOSPHERE DESIGNED MOTORS

In Europe, all motors designed for explosive atmospheres must meet IEC and CENELEC Standards and ATEX Directive 94/9/EC, which is mandatory since July 2003.

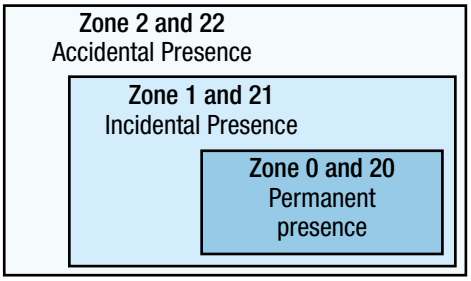
2.1 IEC STANDARDS

The IEC Standard classifies the risk areas into zones and groups:
- The zones are classified according to frequency and period of time that the explosive atmosphere is present.
- The division into groups is based on the aggressiveness of the environment.

Zone classification:

Gases and Vapours	Zone 0	Environment where the explosive atmosphere is present continuously or for long periods of time.
	Zone 1	Environment where the probability of existing an explosive atmosphere is associated with normal operation of the equipment.
	Zone 2	Environment where an explosive atmosphere will probably not be present under normal operating conditions and, if any, this will be for short periods of time.

Dusts	Zone 20	Environment where flammable dust is present continuously or frequently under normal operating conditions in enough amount to generate an explosive concentration of mixed dust with air and/or areas where may occur excessive amount of dust with no further control.
	Zone 21	Area that is not classified as Zone 20. However, where flammable dusts may occur under normal operating conditions in enough amount to generate an explosive concentration of dust mixed with the air.
	Zone 22	Areas that are not classified as Zone 21. However, where flammable dust may occur frequently and is present for short periods of time, or where the amount of dust may occur just under abnormal operating conditions causing an explosive mixture.



Group classification:

GROUPS	Mines	Equipment manufactured for underground operation mines	I	Methane may be present (grisu)
	Other Explosive Atmospheres	Equipment manufactured for other types of industry (surface industry), being subdivided based on the characteristics of the materials present	IIA	acetone, ammonia, benzene, butane, butanol, alcohol butylic, ethane, ethanol, ethyl acetate, gasoline, hepthanes, hexanes, natural gas, methanol, naphtha, propane, propanol, toluene, esthirene, solvents in general
			IIB	acetaldeide, cyclopropane, diethylic ether, ethene, carbon monoxide
			IIC	acetylene, butadiene, ethene oxide, hydrogen, propylene oxide, gases containing over 30% of hydrogen

2.2 CENELEC STANDARDS

CENELEC Standard provides criteria to determine the classification of the equipment into groups and categories:

Group classification:

GROUP I (Mines)	
Categories	
M1	Equipment designed to operate in environments where the explosive atmosphere is frequently present.
M2	Equipment that must be powered off if there is any risk of explosion. Explosive atmosphere is frequently present.

GROUP II* (Surface Industry)			
Categories			Zone
1	Equipment with high level of protection. Explosive atmosphere is present continuously or for long periods of time	1G (gas) 1D (dust)	0 (gas) 20 (dust)
2	Equipment with high level of protection. Explosive atmosphere may occur occasionally.	2G (gas) 2D (dust)	1 (gas) 21 (dust)
3	Equipment with normal level of protection. The explosive atmosphere will probably not occur.	3G (gas) 3D (dust)	2 (gas) 22 (dust)

** Gases are subdivided into IIA, IIB and IIC, as per IEC Standards.*

2.3 ATEX DIRECTIVE 94/9/EC

Valid since March of 1996, this European Directive is mandatory since July 2003. If provides a classification for motors into areas containing explosive atmospheres. More than product specification, the present Directive gives special attention to the production process including design, production itself and sale.
The certification for the system is provided together with the product certification. ATEX Directive 94/9/EC also classifies the equipment to operate in explosive atmospheres into groups and categories following the same classification bases used by CENELEC.

3 CLASSES OF TEMPERATURE

The minimum temperature causing an explosion of a gas, vapour of explosive mixture is called ignition temperature. To avoid any risk of explosion, the motor surface temperature must always stay below the ignition temperature of the explosive mixture.
The internal and external temperature of the electrical equipment must be strictly checked to avoid ignition of an explosive mixture. So the equipment is classified into classes of temperature, as per table below:

Class of Temperature (ºC) GGROUP II* (Surface Industry) IEC / CENELEC	Maximum motor surface temperature (ºC)	Ignition temperature of the explosive mixture (ºC)
T1	450	>450
T2	300	>300
T3	200	>200
T4	135	>135
T5	100	>100
T6	85	>85

4 MOTORS FED BY VARIABLE FREQUENCY DRIVES

Notes: Ex e motor line fed by VFD requires additional certification.

4.1.1 Temperature class

Ex d and Ex de motor line fed by VFD are suitable to operate at temperature class T4.
Note: For Ex nA motor line, please considerer page 23

4.1.2 Application of filters

- Motors with voltages up to 575V do not require application of filters if the criteria below are followed accordingly:

Rated Voltage	Insulation System	TECHNICAL CRITERIA FOR VFD APPLICATION			
		Voltage Spikes motor terminals (maximum)	dV/dt inverter terminals (maximum)	Rise Time(*) inverter terminals (minimum)	MTBP(*) Minimum Time Between Pulse
Vrated ≤ 460V	Standard Insulation	≤ 1430V	≤ 5200 V/µs	≥ 0,1 µs	≥ 6 µs
460V < Vrated ≤ 575V	Reinforced Insulation	≤ 1780V	≤ 6500 V/µs		

(*) Informed by the converter manufacturer.

Note: Nameplate showing voltage 380-415V / 660-690V – 50Hz and 440-480V – 60Hz, and fed by VFD on voltage

660-690V – 50Hz or 480V – 60Hz require filters.

- Motors fed by VFD with voltage range of 575V up to 690V require filters.

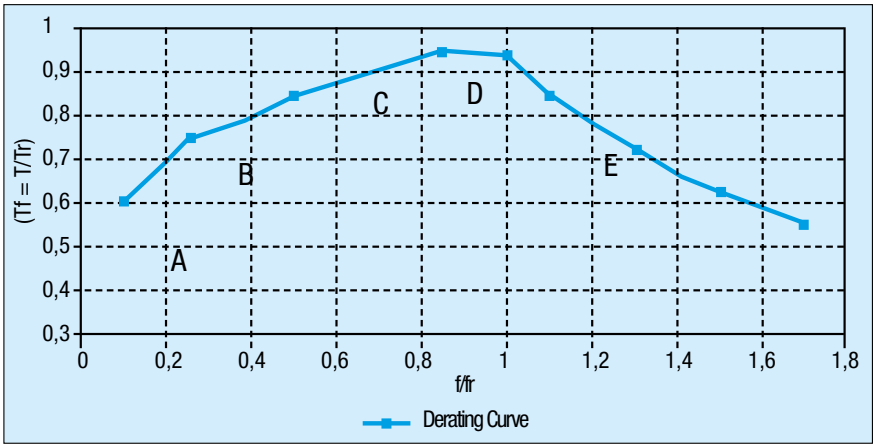
4.1.3 Switching Frequency

The minimum switching frequency is 2.5 kHz.

4.1.4 Type of load torque

For load with quadratic torque, motor can be operated at frequency range from 10% up to 100% of the rated frequency if the load torque at the rated frequency is 95% of the motor rated torque.
For load with constant torque, motor can be worked at frequency range of 10% up to 100% of the rated frequency if the load torque is lower than motor torque derating curve as showing below.
To operate at frequency above the rated frequency, use the derating curve and check if breakdown torque is appropriate for the application in the maximum run speed.

Note: For maximum motor speed selection, item 4.2.1. showing mechanical speed limits must be considered.



PART	DERATING CURVE	
	FREQUENCY RANGE	DERATING
A	0.1 ≤ f/fr < 0.25	Tf = (f/fr) + 0.50
B	0.25 ≤ f/fr < 0.50	Tf = 0.4(f/fr) + 0.65
C	0.50 ≤ f/fr < 0.83	Tf = 0.3(f/fr) + 0.70
D	0.83 ≤ f/fr ≤1.0	Tf = 0.95
E	f/fr > 1.0	Tf = 0.95 / (f/fr)

4.2 Mechanical Characteristics

4.2.1 Mechanical Limit Speed:

The mechanical limit speeds of the motor are indicated on the table below:

MOTOR	SPEED (RPM)			
	2 pole	4 pole	6 pole	8 pole
90 – 100	7000	7000	7000	7000
112	7000	6000	6000	6000
132	6000	5500	5500	5500
160	5000	5000	5000	5000
180	4500	4000	4000	4000
200	4000	3800	3800	3800
225	3600	3600	3600	3600
250	3600	3600	3600	3600
280	3600	3000	3000	3000
315	3600	2500	2500	2500
355	3600	1800	1800	1800

Note: For maximum motor speed selection, the derating curve of item 4.1.4 must be considered.

For other applications, please contact WEG.

4.2.2 Bearing insulation

For “Ex d” and “Ex de” motors, on frames 315S/M and 355M/L* when used with VFD’s must use insulated bearings.

(*) Other frame sizes, on request.

5 PROTECTION CATEGORIES FOR ELECTRIC MOTORS

5.1 TYPE Ex d – EXPLOSION PROOF

It is a type of protection where the parts that may ignite an explosive atmosphere are closed into enclosures which are capable to withstand a pressure during an internal explosion of an explosive mixture and to avoid that explosion leaves this enclosure and reaches an external explosive atmosphere.
An induction electric motor (of any protection) is not totally sealed, that is, air goes in and out. While in operation, it becomes heated up and the internal air gets to a higher pressure compared to the external pressure (air is blown out): when motor is switched - off, the internal pressure decreases, allowing in this way entrance of air (which in this case is contaminated).
The motor surfaces do not need to be totally enclosed to avoid flame propagation. The minimum opening required to avoid passage of flames depends on the gas or vapour that is present.
Therefore, there will always be flame passages on the motor. The safety level on an explosion proof motor is on the fact that it must ensure that all flame passages never exceed the standardized dimensions that the motor is physically suitable to withstand an internal explosion without transmitting to the external environment.
Ex d protection will not allow that an internal explosion propagates to the external environment. To ensure safety to the system, WEG provides a control of the openings and the finishing of joints once these are responsible for the volume of gases exchanged between inside and outside of the motor.

The main characteristics of Ex d motors are as follows:

- Reinforced frame, terminal box and endbells
- Greater contact surface between motor components
- Reduced clearance between motor shaft and bearing cap to avoid transmission of sparks and the external environment
- Water pressure test on all components (frames, endbells, terminal box, terminal box covers)

Application:
Environments containing flammable gases or vapour continuously, intermittently or periodically in enough amount to generate explosive or flammable mixtures arising out of repairs or maintenance services.
The most common locations of Zone 1 and 2, group IIA and IIB are those where the following gases are found present: oil, naphtha, benzene, ammonia, propane, diethylic ether, acetone, alcohol, industrial methane, natural gas.
The main applications include fans, blowers, crushers, conveyor systems, mills, cranes and other applications located in areas that require explosion proof motors.

5.2 TYPE Ex de – EXPLOSION PROOF WITH INCREASED SAFETY TERMINAL BOX

Ex de motors differ from Ex d motors only on the configuration of terminals and terminal box. The terminal box with increased safety terminal block prevents from any ignition source that may occur such as sparks, excessive heating, etc.

The main characteristics of Ex de motors are:

- Terminal box components as well as connection cables must be firmly fastened (without allowing any movement)
- Special terminal block to avoid arcs and sparks and standardized distance between terminals (increased safety terminal block)
- Double grounding must be provided (one on the foot and the other on terminal box covers)

Application:
Same as described for Ex d motors.

5.3 TYPE Ex e – INCREASED SAFETY

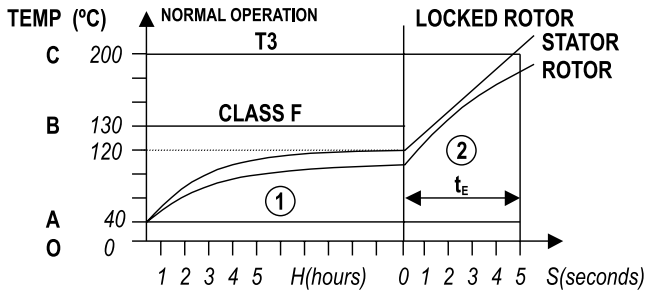
This is an electric equipment which under normal operating conditions will not cause arcs, sparks or overheating enough to cause ignition of an explosive atmosphere which it has been designed to. These motors are similar to standard motors.

However, they are fitted with special features as follows:

- Temperature rise 10K below the maximum temperature allowed for the insulation class
- Commitment with “time tE” (maximum time for switching off through protection device)
- Terminal box components as well as connection cables must be firmly fastened (without allowing any movement)
- External grounding on the frame is mandatory
- Frame grounding must be connected with terminal box grounding
- Drip cover must be applied on vertical applications
- Reduced output x frame ratio
- Special care when manufacturing the winding along with applying double impregnation layer (frames 63 up to 200)
- For frames 225S/M and above resin continuous flow impregnation
- Special terminal block to avoid arcs and sparks and standardized distance between terminals (increased safety terminal block)
- Drain holes on endbells

5.3.1 TIME tE

It is the time required for the motor winding, when starting current goes through it, to reach the limit temperature, starting from the achieved temperature under normal service duty and considering the ambient temperature on its maximum value.
The protection device must be designed so as to avoid any risk under all operating conditions. This protection device must operate, without fault, not only on overload cases, but also on locked rotor conditions. On this way, the value of time tE must be such that, when rotor is locked, motor must be switched off by a protection device that depends on the current, before time tE gets to the end.



On the chart above, the interval OA represents the maximum ambient temperature, and OB is the temperature reached under normal operating duty. In case there is any failure with further rotor locking, the condition is represented on the interval 2 of the chart. The motor temperature increases fastly up to interval OC which must be shorter than motor classification temperature T. So, care must be taken to ensure motor is switched-off within time tE.

Application:

Environments where the probability of existing an explosive atmosphere is associated with normal operation of the equipment in amount enough to cause an explosion.
The environments are classified as Zone 1 and 2, groups IIA, IIB and IIC. The most common gases included in this classification are: acetone, ammonia, benzene, butane, butanol, buthylic alcohol, ethane, ethanol, acetate of ethyl, gasoline, heptanes, hexanes, natural gas, methanol, oil naphtha, propane, propanol, toluene, esthirene, solvents in general, acetaldehyde, cyclopropane, diethylic ether, ethane, carbon monoxide, acetylene, butadiene, ethane oxide, hydrogen, propylene oxide and gases containing over 30% of hydrogen.

5.4 TYPE Ex n – NON-SPARKING

This type of protection is applied to electric equipment which do not cause ignition of an explosive atmosphere under normal operating conditions.

The Ex n motor is built identically to a normal TEFC motor, with the following characteristics:

- Terminal box components as well as connection cables must be firmly fastened (without allowing any movement)
- Increased safety terminal block to avoid arcs and sparks, along with standardized distance between terminals

Application:
Environment where an explosive atmosphere will probably not be present under normal operating conditions and, if any, this will be for short periods of time, that is, an explosive atmosphere may be present accidentally.
The environments are classified as Zone 2, groups IIA, IIB and IIC. The most common gases included in this classification are: acetone, ammonia, benzene, butane, butanol, buthylic alcohol, ethane, ethanol, acetane of ethyl, gasoline, heptanes, hexanes, natural gas, methanol, oil naphtha, propane, propanol, toluene, esthyrene, solvents in general, acetaldehyde, cyclopropane, diethylic ether, ethane, monoxide of carbon, acetylene, butadiene, oxide of ethane, hydrogen, oxide of propylene and gases containing over 30% of hydrogen.

5.5 Cast Iron Motor for Zone 21

These motors are designed to avoid that sparks, arcs or external superficial heat produced, cause the ignition of the dust (cloud or layer). WEG Zone 21 motors are standard motors with special degree of protection that not allow the ingress of dust.

The main characteristics of a Cast Iron Motor for Zone 21 are:

- Degree of protection: IP6X
- Temperature classification: Zone 21: maximum motor guarantee external surface Temperature T125°C – Temperature limitation because of the presence of dust clouds (for materials with ignition temperature above 125°C) and presence of dust layers (up to 5mm).

Application:
These motors are designed to operate in areas that can release flammable dust or in atmospheres where explosions can occur due to a mixture of air and dust. The main applications include sugar refining plants, breweries, cement works, textiles and pharmaceutical, chemical and agricultural process industries.

Ex d / Ex de - Explosion Proof Motors
Cast Iron Frame
Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.55 up to 315kW
- Frames: 90 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Regreasing nipple from frame 225S/M and above
- Metric threaded cable entries on the terminal box
- Thermistors (1 per phase) fitted in frame 160M and above
- Suitable for inverter duty applications
- Color: RAL 5010

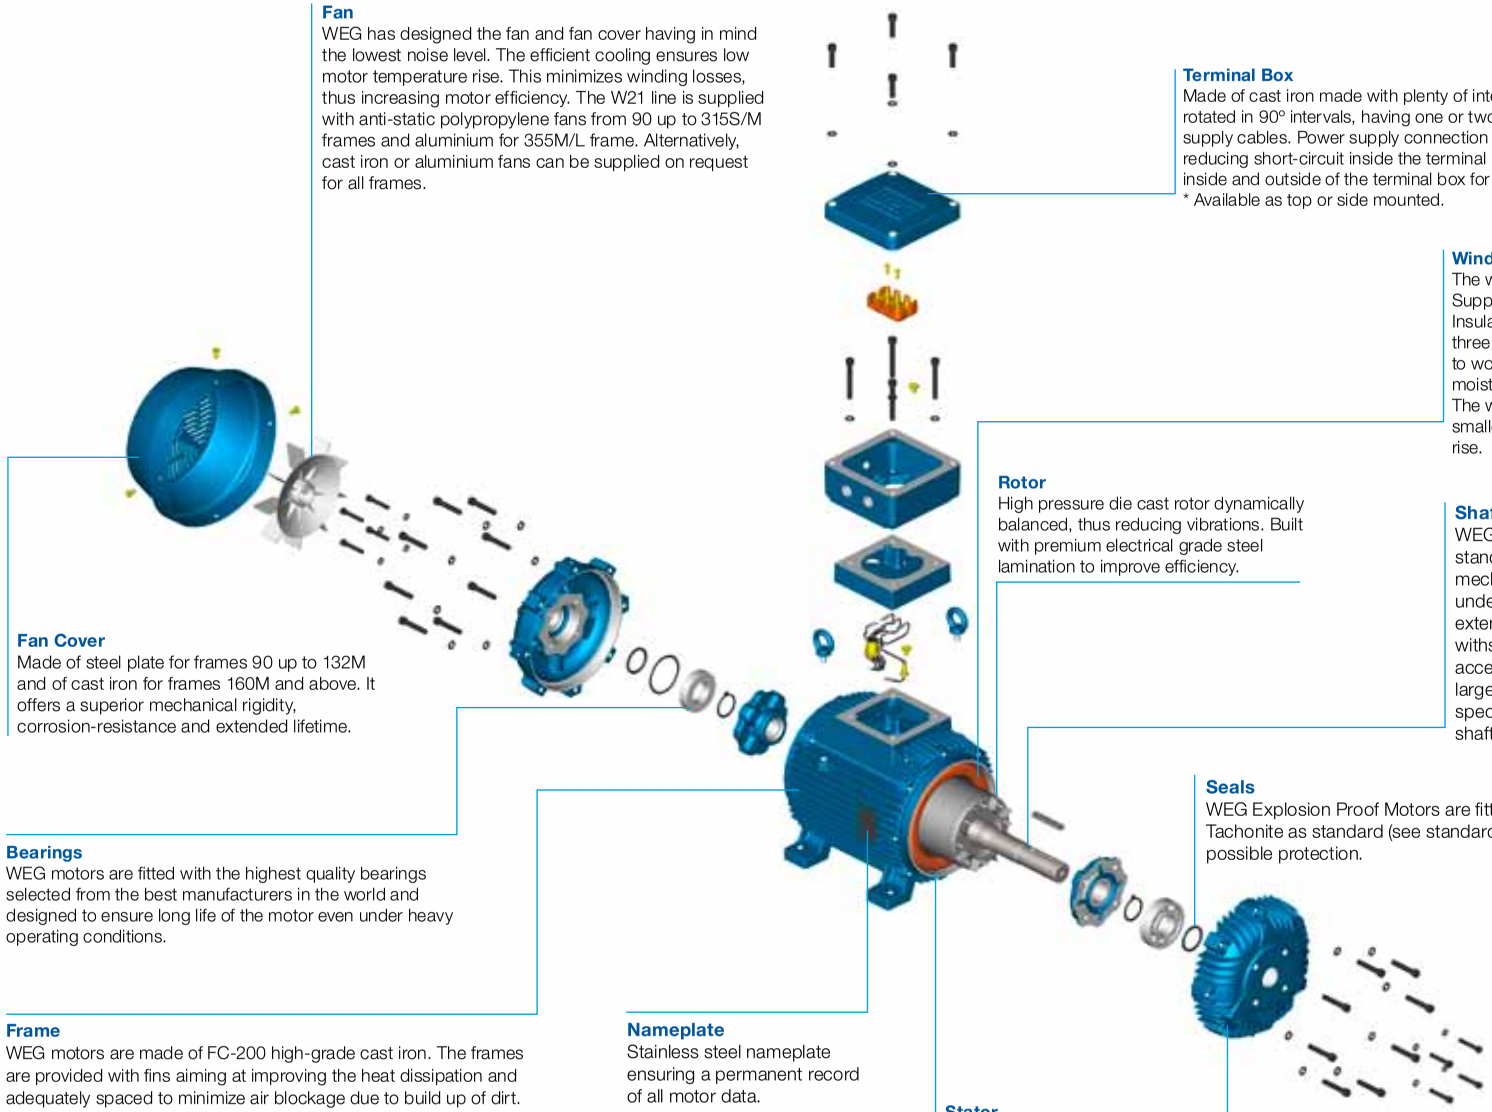
Options Available:

- Degree of Protection: IP56, IP65 or IP66 (W)
- Bearing seals:
  - Lip seal
  - Oil seal
  - Labyrinth taconite seal and W3seal for frames 90S and above
- Thermal protection:
  - Thermistors: frame 132M and below
  - Thermostats
  - RTD-PT 100
- Space heaters
- Design H
- Class “H” insulation
- Roller bearings for frame 160M and above

More options available, on request

Typical Applications:

- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.



Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 90 up to 315S/M frames and aluminium for 355M/L frame. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. The grounding system is placed inside and outside of the terminal box for improved safety.
* Available as top or side mounted.

Winding
The wire is enameled with class H. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to work in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the smallest Joule losses and temperature rise.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency.

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It's size is larger than the standard motor and, upon special design, motor can have second shaft end.

Fan Cover
Made of steel plate for frames 90 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Stator
Built with premium electrical grade steel lamination to reduce electrical losses and operating temperature.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Ex d / Ex de - Explosion Proof Motors
Cast Iron Frame
Premium Efficiency EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.26 up to 315kW
- Frames: 90S/L up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Stainless steel nameplate AISI 316
- Dimensions according to IEC-72
- Performance characteristics according to IEC 34
- Regreasing nipple from frame 225S/M and above
- Metric threaded cable entries on the terminal box
- Thermistors (1 per phase) fitted in frame 160M and above
- Suitable for inverter duty applications
- Color: RAL 5009

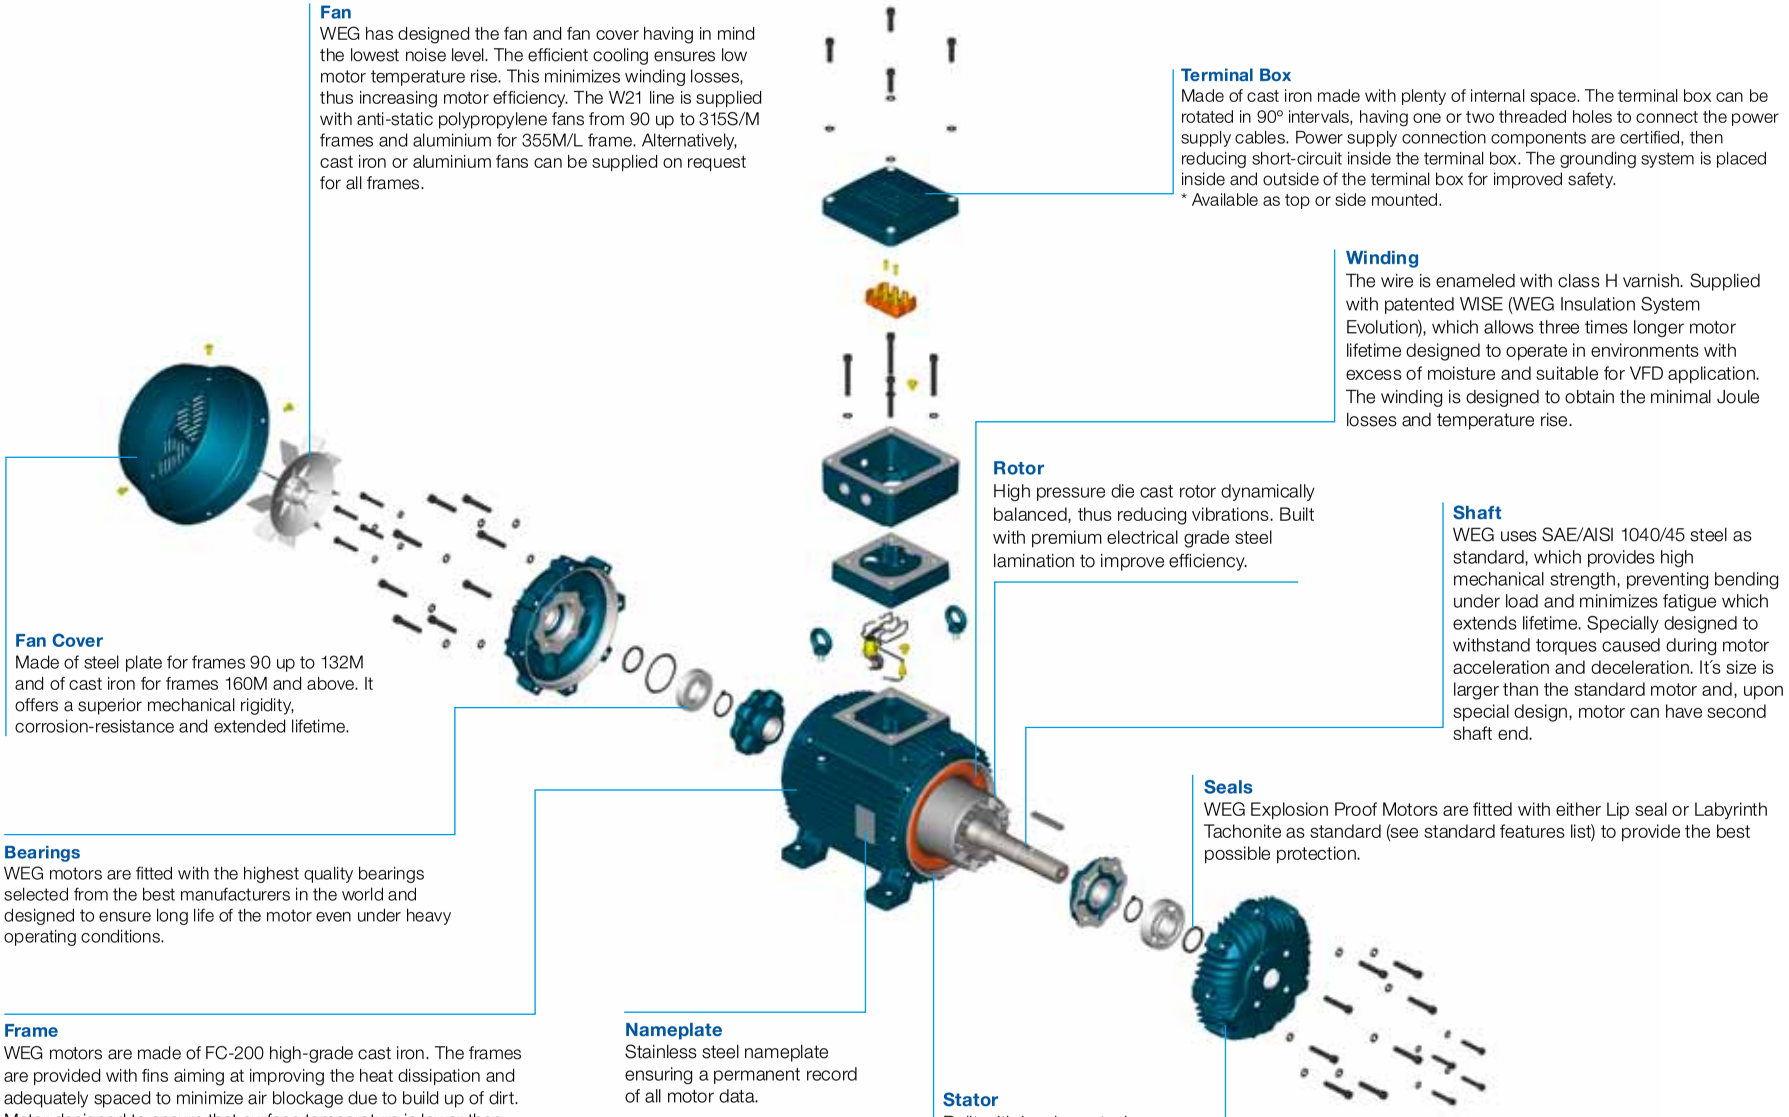
Options Available:

- Degree of Protection: IP56, IP65 or IP66 (W)
- Bearing seals:
  - Lip seal
  - Oil seal
  - Labyrinth taconite seal and W3seal for frames 90S and above
- Thermal protection:
  - Thermistors: frame 132M and below
  - Thermostats
  - RTD-PT 100
- Space heaters
- Design H
- Class “H” insulation
- Roller bearings for frame 160M and above

More options available, on request

Typical Applications:

- Pumps
- Fans
- Crushers
- Conveyor belts
- Mills
- Centrifugal machines
- Presses
- Elevators
- Packaging equipment
- Grinders and others.



Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 90 up to 315S/M frames and aluminium for 355M/L frame. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. The grounding system is placed inside and outside of the terminal box for improved safety.
* Available as top or side mounted.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency.

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It's size is larger than the standard motor and, upon special design, motor can have second shaft end.

Fan Cover
Made of steel plate for frames 90 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Stator
Built with low loss steel lamination to reduce magnetic losses and operating temperature.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Notes:
- The motors can also operate at 60Hz supply. The change in performance data can be obtained directly from the local WEG distributor.
- The values shown herewith are subjected to change without prior notice.
I_l / I_n = Locked rotor current
T_l / T_n = Locked rotor torque
I_n = Full load current

Ex d / Ex de - Explosion Proof Motors - Cast Iron Frame
Two speed - Premium Efficiency EFF1

Constant torque VIII/IV Pole - Dahlander Winding

Notes:
- The motors can also operate at 60Hz supply. The change in performance data can be obtained directly from the local WEG distributor.
- The values shown herewith are subjected to change without prior notice.
I_l / I_n = Locked rotor current
T_l / T_n = Locked rotor torque
I_n = Full load current

Ex d - Explosion Proof Multivoltage Motors With Brake - Cast Iron Frame Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 2.2 up to 18,5kW
- Frames: 132S up to 160L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Class of temperature: T3 or T4
- Thermal protection:
  - Thermistors 130°C/T4 and 155°C/T3
  - Thermostat 140°C - brake
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Reinforced set screws
- Internal DE and NDE bearing cap to prevent flame propagation
- Machined metal to metal surfaces between frame and terminal box
- Ground lug inside the terminal box
- Stainless steel nameplate identifying: standards, classification, temperature code and certification number
- Epoxy based painting plan 202
- Color: RAL 5010

Options Available:

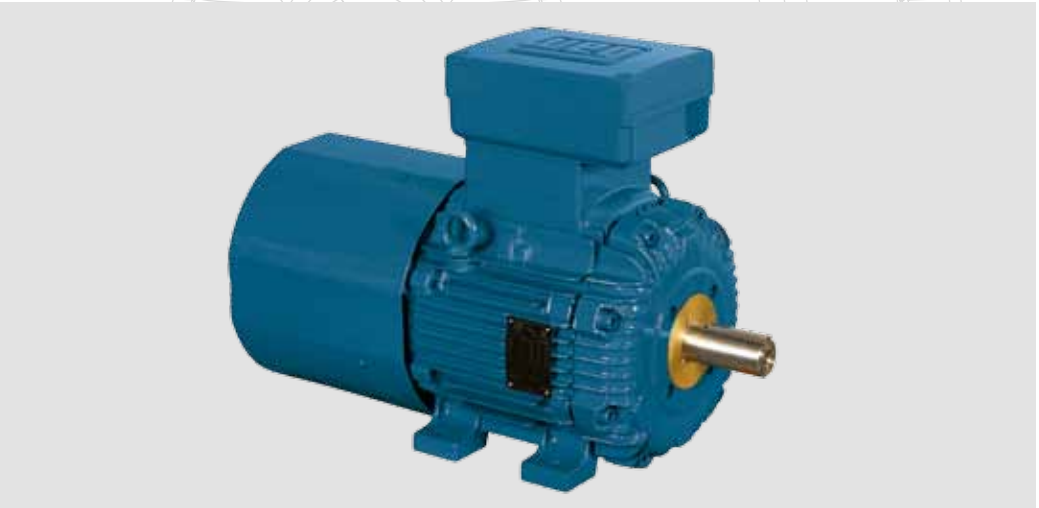
- Degree of Protection: IP56 or IP66
- Bearing seals:
  - Lip seal
  - Oil seal
  - Labyrinth taconite seal and W3seal for frames 90S and above

More options available, on request

Typical Applications:

WEG explosion proof motors meet ATEX Directive 94/9/EC and are designed to operate in areas that require quick stop and/or time saving during operation in application that require explosion proof motors like:

- Machine tools
- Looms
- Packing machines
- Conveyor belts
- Wash and bottling machines
- Cranes



Fan Cover
Made of steel plate for frames 90 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.
With a design incorporating the braking system, the fan cover guarantees proper fan cover to the upper brake allowing operation in severe environments. In addition, it offers quality and performance requirements of the motors such as noise level.

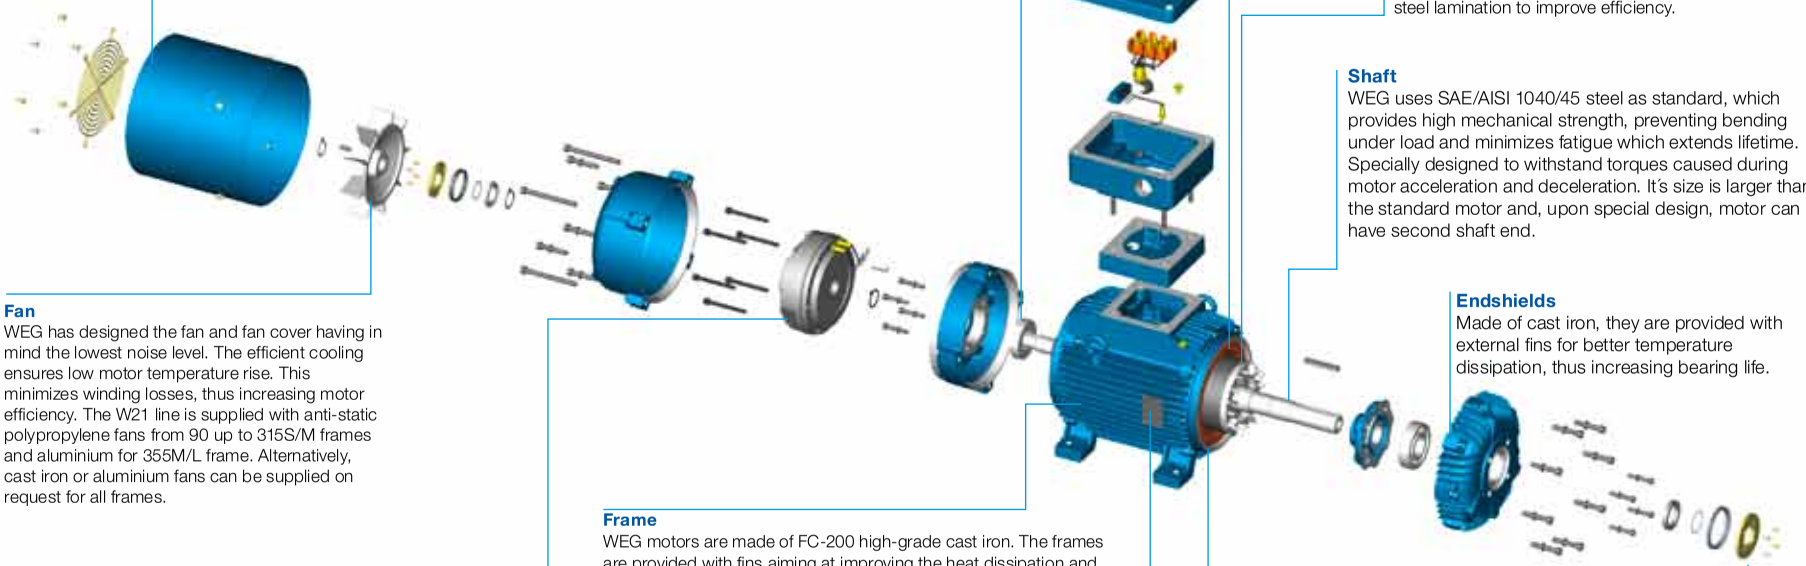
Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. The grounding system is placed inside and outside of the terminal box for improved safety. Suitable to take the additional connection of the brake as well as bridge rectifier which is fixed internally without affecting the motor degree of protection.
* Available as top or side mounted.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Winding
The wire is enameled with class H. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to work in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the smallest Joule losses and temperature rise.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency.

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It´s size is larger than the standard motor and, upon special design, motor can have second shaft end.



Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 90 up to 315S/M frames and aluminium for 355M/L frame. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Brake
The electromagnetic brake is of sturdy construction offering high performance for its low number of movable components and versatility on the application, resulting in extended lifetime and low maintenance. The possibility of having several torques and several power supply voltages makes this set a versatile component.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Stator
Built with premium electrical grade steel lamination to reduce electrical losses and operating temperature.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

W3Seal
Exclusive WEG sealing system (tachonite + v́ring + óring) guarantee maximum protection against the ingress of solid and liquid contaminating

** This data apply to Ex d - Explosion Multivoltage Motors with Brake – Improved Efficiency - EFF2, Premium Efficiency – EFF1.*

Ex e - Increased Safety Motors
Cast Iron Frame
Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.18 up to 100kW
- Frames: 63 up to 315S/M
- Voltage: 218-242 / 380-420 / 655-690
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Class of temperature: T1 / T2 / T3 / T4
- Thermistors 110°C/T4 - 1 per phase from frame 160
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring seal
- Grease fitting from frame 160
- Aluminium fan
- Plastic thread plug
- Increased safety terminal box
- Ground lug inside the terminal box
- Color: RAL 5010

Options Available:

- Sealed Bearings on frames 160 up to 200
- Cable gland
- Roller bearing from160
- Other bearing seals
- Other mounting
- Other paint options

More options available, on request

Typical Applications:

Environments where the probability of existing an explosive atmosphere is associated with normal operation of the equipment in amount enough to cause an explosion:

- Pumps
- Fans
- Conveyor belts
- Machine tools
- Mills
- Centrifugal machines
- Presses
- Elevators
- Looms
- Grinders
- Woodworking
- Cooling
- Packaging equipment
- Other Severe Duty applications where the environments are classified as Zone 1 and 2, groups IIA, IIB and IIC.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

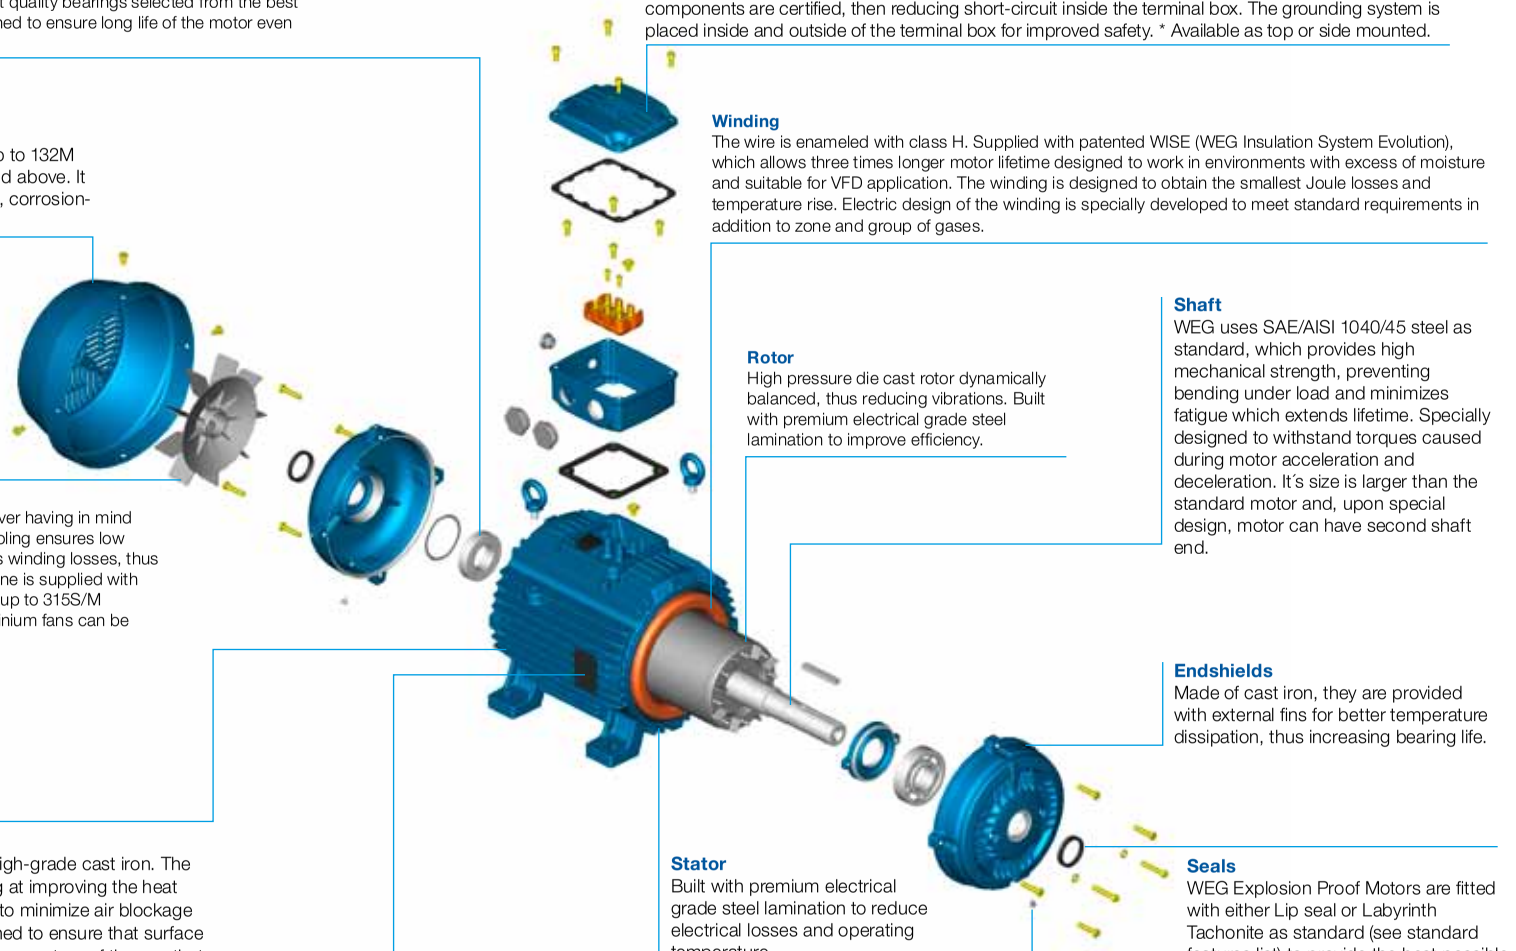
Fan Cover
Made of steel plate for frames 63 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 63 up to 315S/M frames. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. The grounding system is placed inside and outside of the terminal box for improved safety. * Available as top or side mounted.

Winding
The wire is enameled with class H. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to work in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the smallest Joule losses and temperature rise. Electric design of the winding is specially developed to meet standard requirements in addition to zone and group of gases.



Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency.

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It´s size is larger than the standard motor and, upon special design, motor can have second shaft end.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Stator
Built with premium electrical grade steel lamination to reduce electrical losses and operating temperature.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Ex nA - Non Sparking Motors
Cast Iron Frame
Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 250kW
- Frames: 63 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring seal
- Temperature classification:
  - Zone 2: class of temperature T3
  - Zone 22: maximum motor guaranteed external surface temperature T125°C.
  Temperature limitation due to the presence of dust clouds (for materials with ignition temperature above 125° C) and presence of dust layers (up to 5mm).
  Note: On VFD Application, motor temperature class is ΔT = 160° C, marking: CE Ex II 3D T160°C
- Fan: Conductive plastic (63-315 frames)
  Aluminium (355 frames)
- Grease fitting from frame 160
- Plastic thread plug
- Increased safety terminal box
- Ground lug inside the terminal box
- Color: RAL 5010

Options Available:

Options Available:

- Degree of Protection: IP56, IP65 or IP66(W)
- Sealed Bearings on frames 160 up to 200
- Cable glands
- Other paint options

More options available, on request

Typical Applications:

Typical Applications:
These motors are used in environment where an explosive atmosphere will probably not be present under normal operating conditions and, if any, this will be for short periods of time:

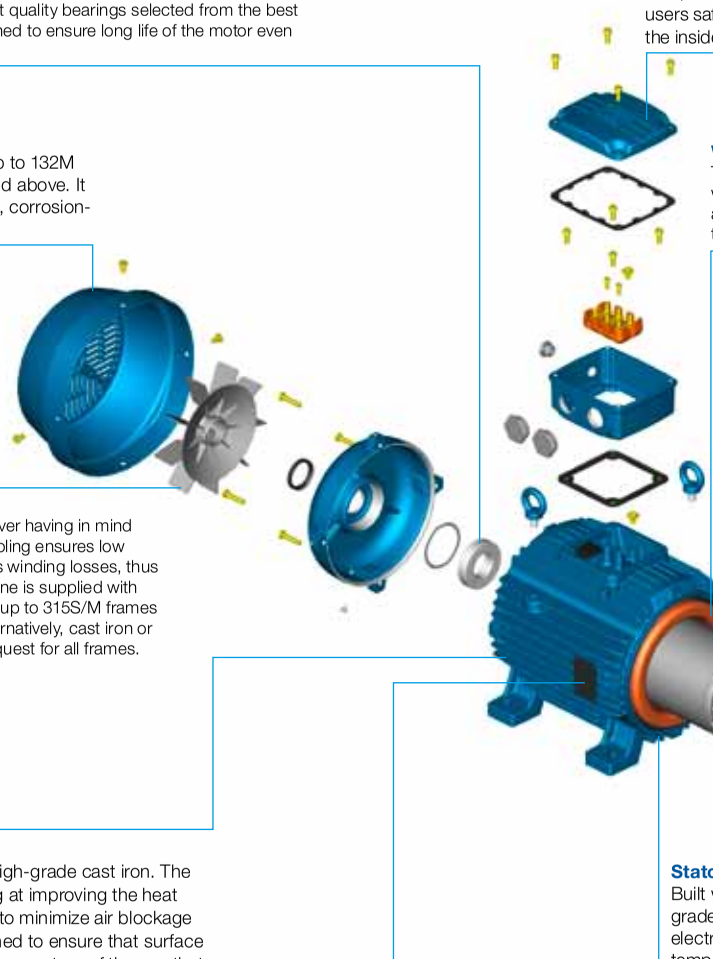
- Pumps
- Fans
- Conveyor belts
- Machine tools
- Mills
- Centrifugal machines
- Presses
- Elevators
- Looms
- Grinders
- Woodworking
- Cooling
- Packaging equipment
- Other severe duty applications where the environments are classified as Zone 2, groups IIA, IIB and IIC.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90º intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. Designed in such a way that the energized components remain at a minimum safe distance from grounded components parts. In order to allow end users safety, the Ex "n" motors are designed with grounding lug inside and outside of the terminal box, with the inside grounding lugs duly connected from the factory. * Available as top or side mounted.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Fan Cover
Made of steel plate for frames 63 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

Winding
The wire is enameled with class H. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to work in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the smallest Joule losses and temperature rise.



Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency. Designed to meet performance and surface temperature standard requirements (as long as it is kept below the ignition temperature of the possible present gas).

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It´s size is larger than the standard motor and, upon special design, motor can have second shaft end.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 63 up to 315S/M frames and aluminium for 355M/L frame.. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Stator
Built with premium electrical grade steel lamination to reduce electrical losses and operating temperature.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Ex nA - Non Sparking Motors
Cast Iron Frame
Premium Efficiency EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 250kW
- Frames: 63 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring seal
- Temperature classification:
  - Zone 2: class of temperature T3
  - Zone 22: maximum motor guaranteed external surface temperature T125°C.
  Temperature limitation due to the presence of dust clouds (for materials with ignition temperature above 125° C) and presence of dust layers (up to 5mm).
  Note: On VFD Application, motor temperature class is ΔT = 160° C, marking: CE Ex II 3D T160°C
- Fan: Conductive plastic (63-315 frames)
  Aluminium (355 frames)
- Grease fitting from frame 160
- Plastic thread plug
- Increased safety terminal box
- Ground lug inside the terminal box
- Color: RAL 5009

Options Available:

Options Available:
- Degree of Protection: IP56, IP65 or IP66(W)
- Sealed Bearings on frames 160 up to 200
- Cable glands
- Other paint options

More options available, on request

Typical Applications:

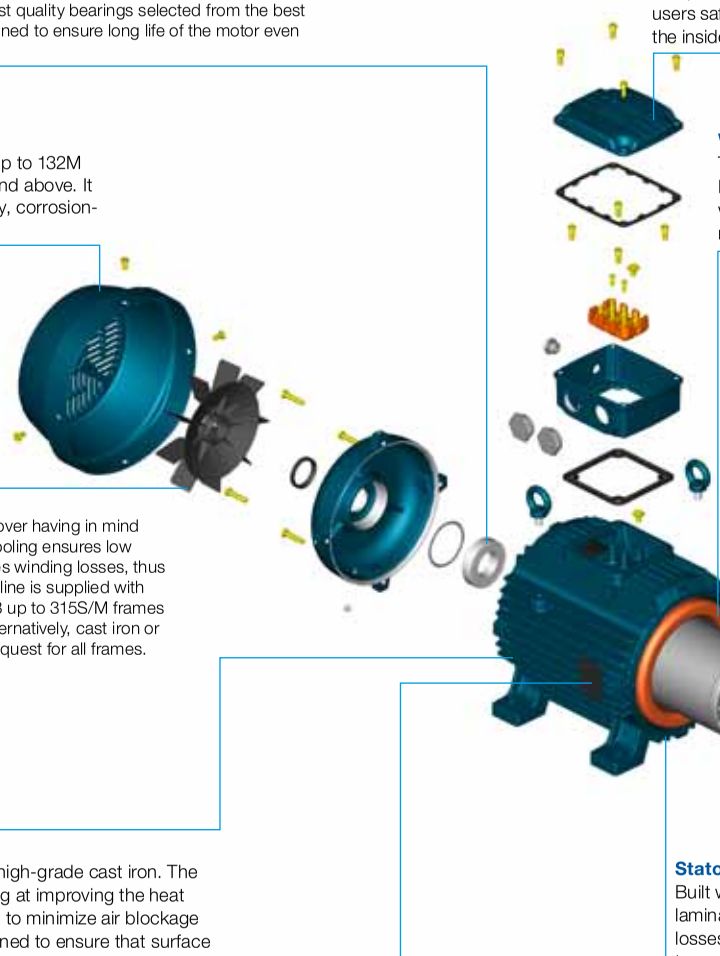
Typical Applications:
These motors are used in environment where an explosive atmosphere will probably not be present under normal operating conditions and, if any, this will be for short periods of time:
- Pumps
- Fans
- Conveyor belts
- Machine tools
- Mills
- Centrifugal machines
- Presses
- Elevators
- Looms
- Grinders
- Woodworking
- Cooling
- Packaging equipment
- Other severe duty applications where the environments are classified as Zone 2, groups IIA, IIB and IIC.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90º intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. Designed in such a way that the energized components remain at a minimum safe distance from grounded components parts. In order to allow end users safety, the Ex "n" motors are designed with grounding lug inside and outside of the terminal box, with the inside grounding lugs duly connected from the factory. * Available as top or side mounted.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Fan Cover
Made of steel plate for frames 63 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

Winding
The wire is enameled with class H varnish. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.



Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency. Designed to meet performance and surface temperature standard requirements (as long as it is kept below the ignition temperature of the possible present gas).

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It´s size is larger than the standard motor and, upon special design, motor can have second shaft end.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 63 up to 315S/M frames and aluminium for 355M/L frame.. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Stator
Built with low loss steel lamination to reduce magnetic losses and operating temperature.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

Ex nA - Non Sparking Motors
Cast Iron Frame
Top Premium Efficiency Exceeds EFF1

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 4 up to 315kW
- Frames: 112 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- V’Ring seal
- Temperature classification:
  - Zone 2: class of temperature T3
  - Zone 22: maximum motor guaranteed external surface temperature T125°C.
  Temperature limitation due to the presence of dust clouds (for materials with ignition temperature above 125° C) and presence of dust layers (up to 5mm).
  Note: On VFD Application, motor temperature class is ΔT = 160° C, marking: CE Ex II 3D T160°C
- Fan: Conductive plastic (63-315 frames)
  Aluminium (355 frames)
- Grease fitting from frame 160
- Plastic thread plug
- Increased safety terminal box
- Ground lug inside the terminal box
- Color: RAL 6021

Options Available:

Options Available:

- Degree of Protection: IP56, IP65 or IP66(W)
- Sealed Bearings on frames 160 up to 200
- Cable glands
- Other paint options

More options available, on request

Typical Applications:

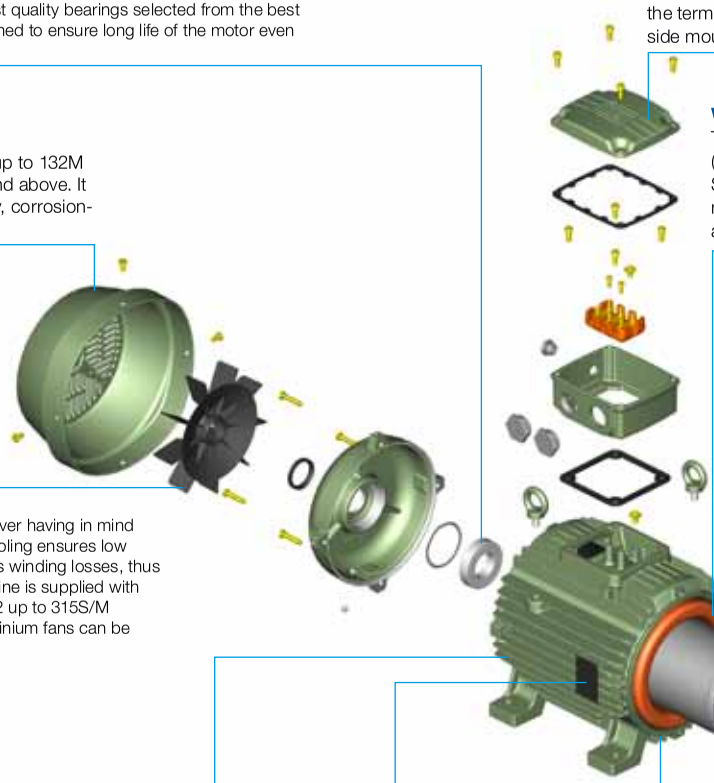
Typical Applications:
These motors are used in environment where an explosive atmosphere will probably not be present under normal operating conditions and, if any, this will be for short periods of time:

- Pumps
- Fans
- Conveyor belts
- Machine tools
- Mills
- Centrifugal machines
- Presses
- Elevators
- Looms
- Grinders
- Woodworking
- Cooling
- Packaging equipment
- Other severe duty applications where the environments are classified as Zone 2, groups IIA, IIB and IIC.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. Designed in such a way that the energized components remain at a minimum safe distance from grounded components parts. In order to allow end users safety, the Ex "n" motors are designed with grounding lug inside and outside of the terminal box, with the inside grounding lugs duly connected from the factory. * Available as top or side mounted.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Fan Cover
Made of steel plate for frames 112 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.



Winding
The wire is enameled with class H Varnish and are impregnated with dipping and baking process (frames 112 up to 200L) and continuous resin flow process (frames 225S/M up to 315M/L). Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to operate in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the minimal Joule losses and temperature rise.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency. Designed to meet performance and surface temperature standard requirements (as long as it is kept below the ignition temperature of the possible present gas).

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It´s size is larger than the standard motor and, upon special design, motor can have second shaft end.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 112 up to 315S/M frames. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Stator
The stator is built with highest quality of steel lamination and it is thermally and chemically treated to reduce electrical losses and operating temperature. Guarantees high efficiency and extended motor lifetime.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

Drain Hole
Provided with plastic drain plug allowing drainage of condensed water.

- *All the dimensions are given in millimeters*
- *Certified threaded plugs for EEx e motor line*
- *The values shown are subject to change without prior notice*

** Shaft dimensions for II pole motors, only for direct coupling*
*** For frame 100L, 3 kW, 4 poles, Premium Efficiency motors, the L dimension is 420mm and LC dimension is 475mm.*

** This data apply to EEx d - Non sparking Multivoltage Motors – Improved Efficiency - EFF2, Premium Efficiency – EFF1, Top Premium Efficiency – Exceeds EFF1*

Ex nA - Non Sparking Motors - Cast Iron Frame

Cast Iron Frame Motors For Zone 21 Improved Efficiency EFF2

Standard Features:

- Three-phase, multivoltage, IP66, TEFC
- Output: 0.12 up to 250kW
- Frames: 63 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Oil Seal (frames 63 up to 80)
- W3Seal (frames 90S up to 355M/L)
- Anti-condensation drain holes
- Temperature Classification: Zone 21-maximum guaranteed external surface temperature T125ºC temperature limitation because of the presence of dust clouds (for material with ignition temperature above 125ºC) and presence of dust layers (up to 5mm)
- Regreasing nipples from frame 225S/M and above
- Metric thread cable entries in terminal box
- Thermistors (1 per phase) 140°C
- Suitable for Inverter Duty applications
- Color: RAL 5010

Options Available:

- Degree of Protection: IP65
- Bearing seals:
  - Oil seal (frames 90S up to 355M/L)
- Thermal protection:
  - Thermostats
  - RTD-PT 100
- Space heaters
- Design H
- Class “H” insulation
- Roller bearings for frame 160M and above

More options available, on request

Typical Applications:

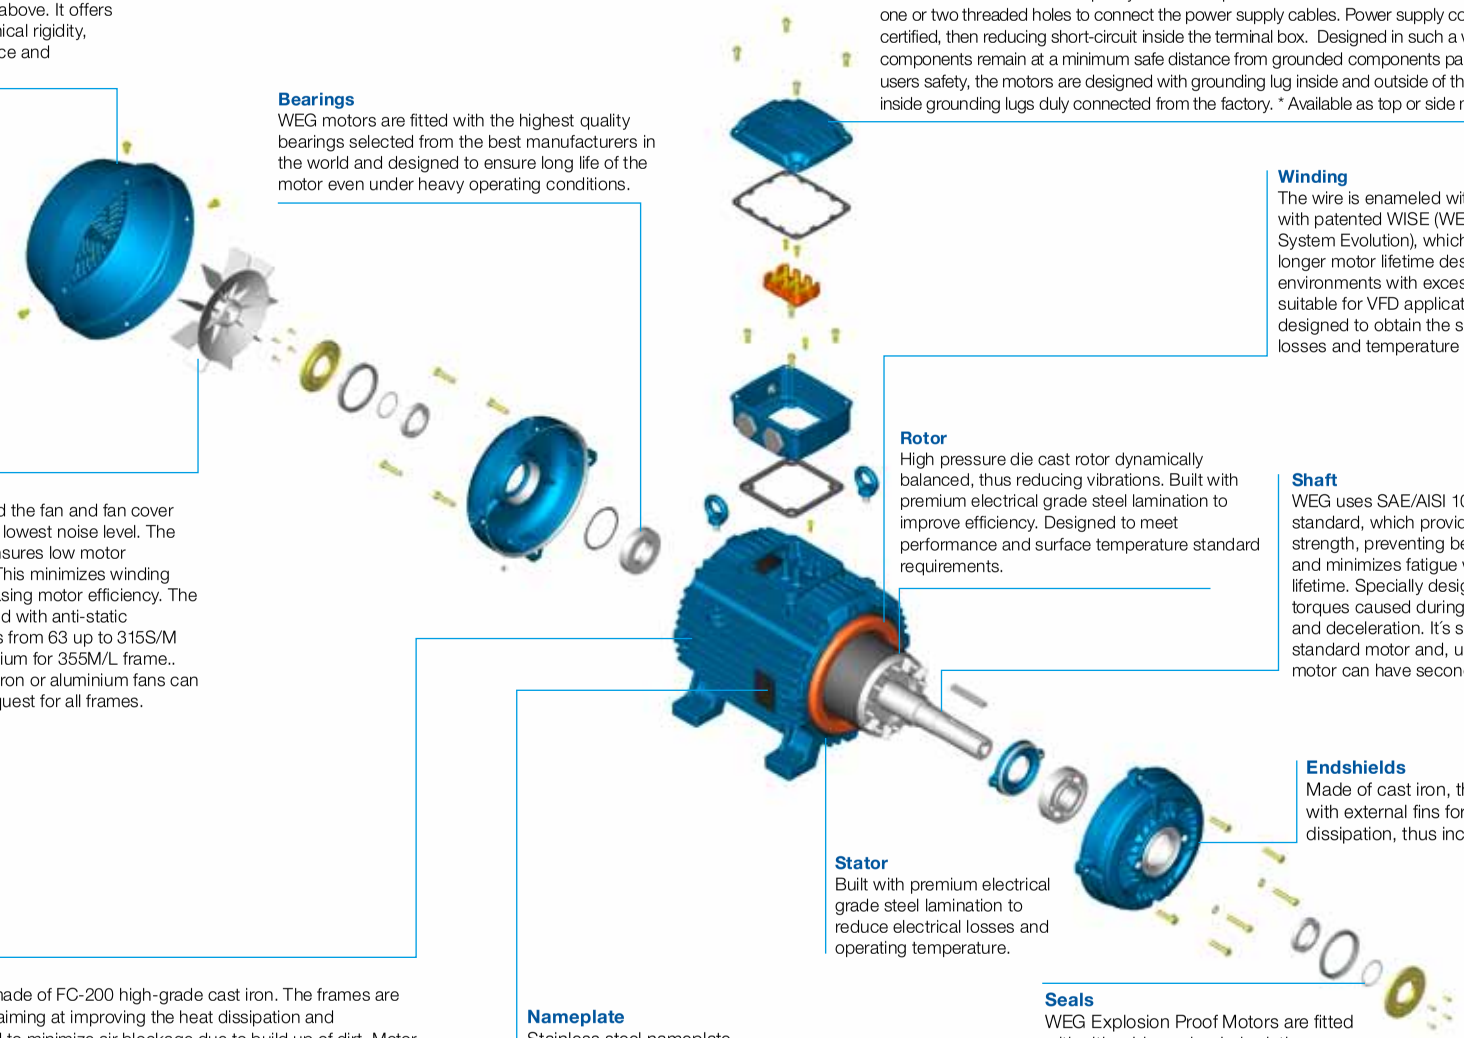
These motors are designed to operate in areas that can release flammable dust or in atmospheres where explosions can occur due to a mixture of air and dust:

- Sugar refining plants
- Breweries
- Cement plants
- Textiles, pharmaceutical, chemical and agricultural process industries
- Other several duty applications

Fan Cover
Made of steel plate for frames 63 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90º intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. Designed in such a way that the energized components remain at a minimum safe distance from grounded components parts. In order to allow end users safety, the motors are designed with grounding lug inside and outside of the terminal box, with the inside grounding lugs duly connected from the factory. * Available as top or side mounted.



Winding
The wire is enameled with class H. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to work in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the smallest Joule losses and temperature rise.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency. Designed to meet performance and surface temperature standard requirements.

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It´s size is larger than the standard motor and, upon special design, motor can have second shaft end.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 63 up to 315S/M frames and aluminium for 355M/L frame.. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Stator
Built with premium electrical grade steel lamination to reduce electrical losses and operating temperature.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

W3Seal
Exclusive WEG sealing system (tachonite + v´ring + o´ring) guarantee maximum protection against the ingress of solid and liquid contaminating

Cast Iron Frame Motors For Zone 21 - Improved Efficiency EFF2

Cast Iron Frame Motors For Zone 21 Premium Efficiency EFF1

Standard Features:

- Three-phase, multivoltage, IP66, TEFC
- Output: 0.12 up to 250kW
- Frames: 63 up to 355M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Oil Seal (frames 63 up to 80)
- W3Seal (frames 90S up to 355M/L)
- Anti-condensation drain holes
- Temperature Classification: Zone 21-maximum guaranteed external surface temperature T125ºC temperature limitation because of the presence of dust clouds (for material with ignition temperature above 125ºC) and presence of dust layers (up to 5mm)
- Regreasing nipples from frame 225S/M and above
- Metric thread cable entries in terminal box
- Thermistors (1 per phase) 140°C
- Suitable for Inverter Duty applications
- Color: RAL 5009

Options Available:

- Degree of Protection: IP65
- Bearing seals:
  - Oil seal (frames 90S up to 355M/L)
- Thermal protection:
  - Thermostats
  - RTD-PT 100
- Space heaters
- Design H
- Class “H” insulation
- Roller bearings for frame 160M and above

More options available, on request

Typical Applications:

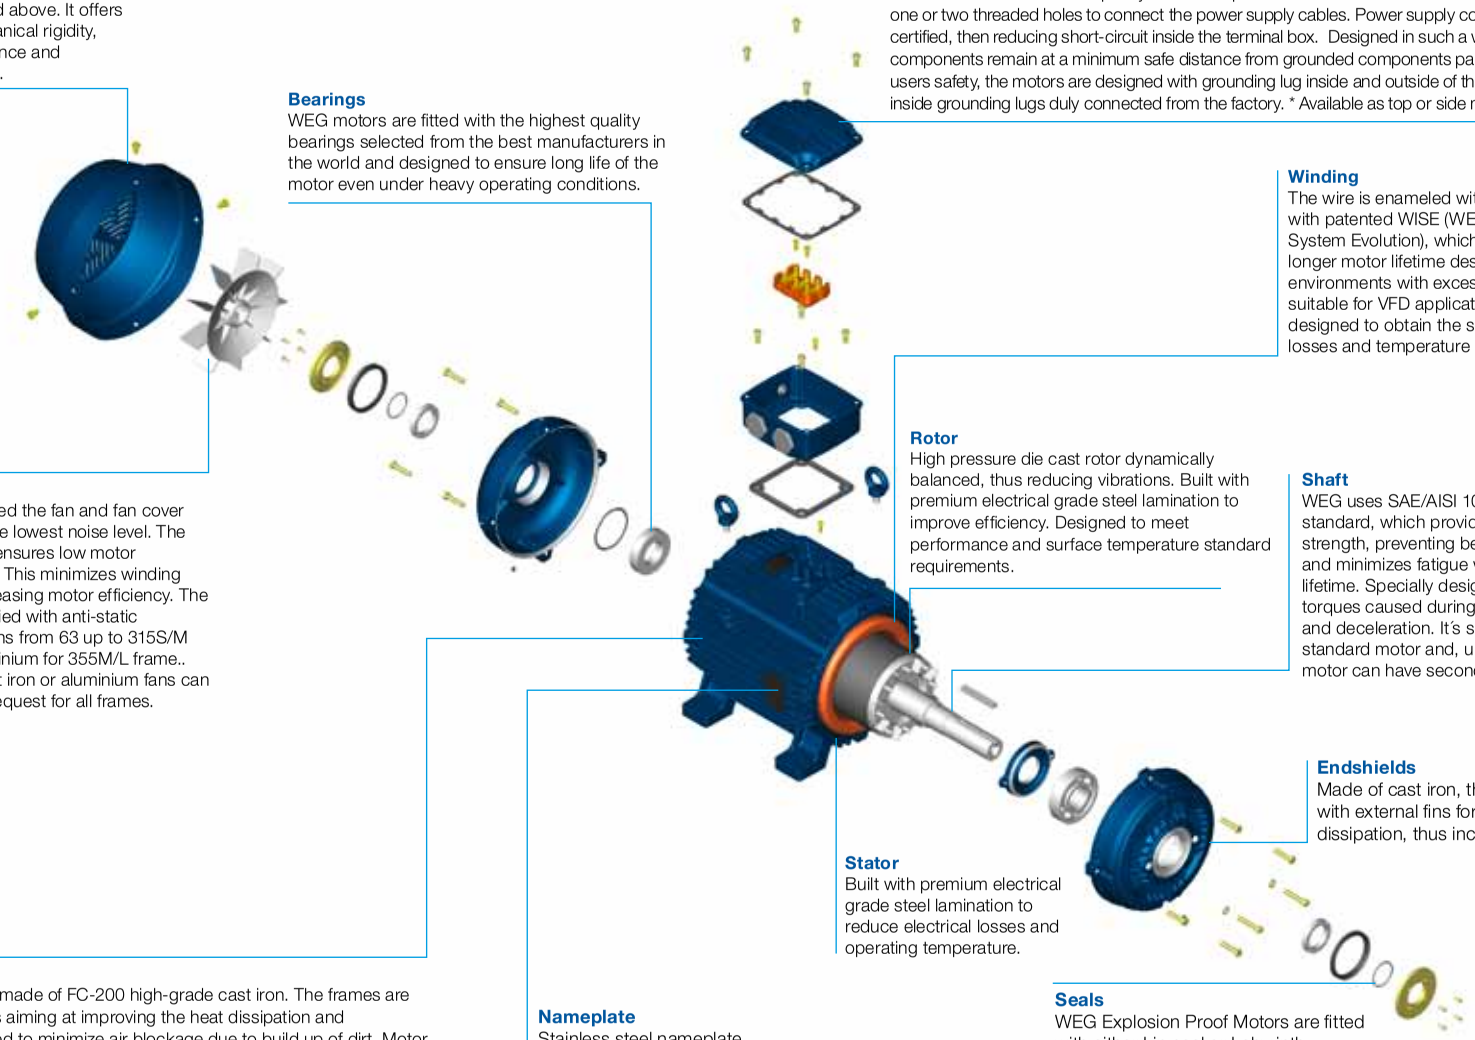
These motors are designed to operate in areas that can release flammable dust or in atmospheres where explosions can occur due to a mixture of air and dust:

- Sugar refining plants
- Breweries
- Cement plants
- Textiles, pharmaceutical, chemical and agricultural process industries
- Other several duty applications

Fan Cover
Made of steel plate for frames 63 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. Designed in such a way that the energized components remain at a minimum safe distance from grounded components parts. In order to allow end users safety, the motors are designed with grounding lug inside and outside of the terminal box, with the inside grounding lugs duly connected from the factory. * Available as top or side mounted.



Winding
The wire is enameled with class H. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to work in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the smallest Joule losses and temperature rise.

Rotor
High pressure die cast rotor dynamically balanced, thus reducing vibrations. Built with premium electrical grade steel lamination to improve efficiency. Designed to meet performance and surface temperature standard requirements.

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It´s size is larger than the standard motor and, upon special design, motor can have second shaft end.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 63 up to 315S/M frames and aluminium for 355M/L frame.. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Stator
Built with premium electrical grade steel lamination to reduce electrical losses and operating temperature.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

W3Seal
Exclusive WEG sealing system (tachonite + v´ring + o´ring) guarantee maximum protection against the ingress of solid and liquid contaminating

Cast Iron Frame Motors For Zone 21 - Premium Efficiency EFF1

Cast Iron Frame Motors For Zone 21 Top Premium Efficiency Exceeds EFF1

Standard Features:

- Three-phase, multivoltage, IP66, TEFC
- Output: 4 up to 315kW
- Frames: 112 up to 315M/L
- Voltage: 220-240/380-415V (up to 100L)
  380-415/660V (from 112M and up)
- Class “F” insulation (ΔT=80K)
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Oil Seal (frames 63 up to 80)
- W3Seal (frames 90S up to 355M/L)
- Anti-condensation drain holes
- Temperature Classification: Zone 21-maximum guaranteed external surface temperature T125ºC temperature limitation because of the presence of dust clouds (for material with ignition temperature above 125ºC) and presence of dust layers (up to 5mm)
- Regreasing nipples from frame 225S/M and above
- Metric thread cable entries in terminal box
- Thermistors (1 per phase) 140°C
- Suitable for Inverter Duty applications
- Color: RAL 6021

Options Available:

- Degree of Protection: IP65
- Bearing seals:
  - Oil seal (frames 90S up to 355M/L)
- Thermal protection:
  - Thermostats
  - RTD-PT 100
- Space heaters
- Design H
- Class “H” insulation
- Roller bearings for frame 160M and above

More options available, on request

Typical Applications:

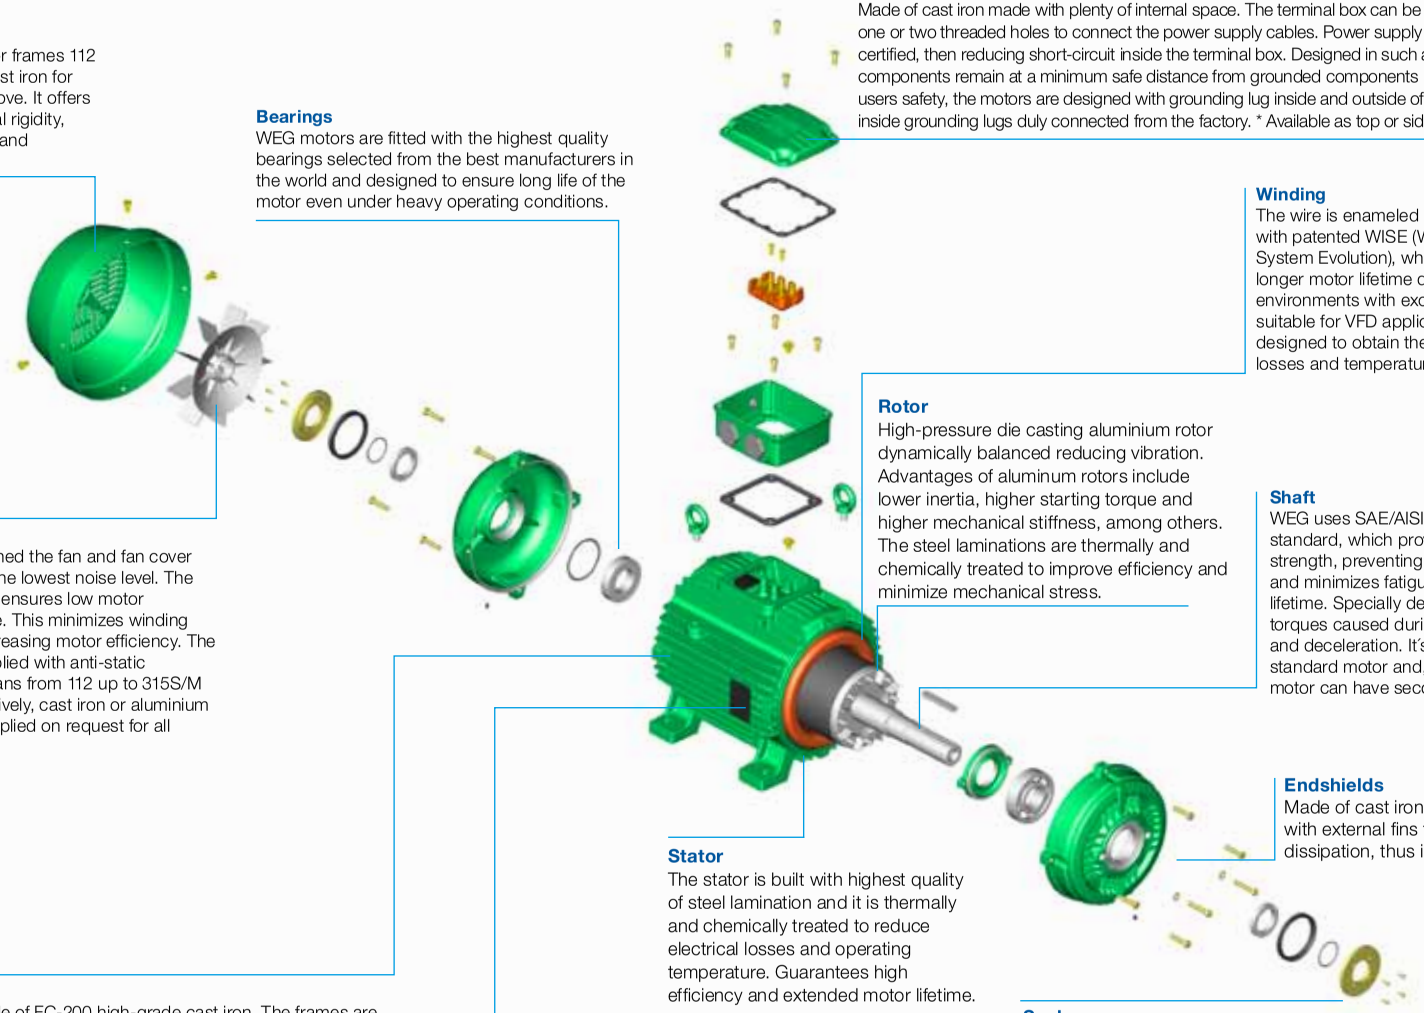
These motors are designed to operate in areas that can release flammable dust or in atmospheres where explosions can occur due to a mixture of air and dust:

- Sugar refining plants
- Breweries
- Cement plants
- Textiles, pharmaceutical, chemical and agricultural process industries
- Other several duty applications

Fan Cover
Made of steel plate for frames 112 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

Bearings
WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

Terminal Box
Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90º intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. Designed in such a way that the energized components remain at a minimum safe distance from grounded components parts. In order to allow end users safety, the motors are designed with grounding lug inside and outside of the terminal box, with the inside grounding lugs duly connected from the factory. * Available as top or side mounted.



Winding
The wire is enameled with class H. Supplied with patented WISE (WEG Insulation System Evolution), which allows three times longer motor lifetime designed to work in environments with excess of moisture and suitable for VFD application. The winding is designed to obtain the smallest Joule losses and temperature rise.

Rotor
High-pressure die casting aluminium rotor dynamically balanced reducing vibration. Advantages of aluminum rotors include lower inertia, higher starting torque and higher mechanical stiffness, among others. The steel laminations are thermally and chemically treated to improve efficiency and minimize mechanical stress.

Shaft
WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specially designed to withstand torques caused during motor acceleration and deceleration. It´s size is larger than the standard motor and, upon special design, motor can have second shaft end.

Fan
WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 112 up to 315S/M frames. Alternatively, cast iron or aluminium fans can be supplied on request for all frames.

Endshields
Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

Stator
The stator is built with highest quality of steel lamination and it is thermally and chemically treated to reduce electrical losses and operating temperature. Guarantees high efficiency and extended motor lifetime.

Frame
WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed towithstand an explosion inside the motor without causing any risk to outside areas since there is no flame flame propagation through flame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

Nameplate
Stainless steel nameplate ensuring a permanent record of all motor data.

Seals
WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

W3Seal
Exclusive WEG sealing system (tachonite + v́ring + o´ring) guarantee maximum protection against the ingress of solid and liquid contaminating

Marine Motors
Safe and Hazardous Areas

Marine Motors

1 INTRODUCTION

The present chapter refers to Low Voltage three phase, squirrel cage induction motors, manufactured under the highest quality and product Standards, to suit a very demanding environments and systems for Marine applications, namely the general standards applicable to Rotating Electrical Machines (IEC / EN), and the specific ones for marine use (IEC).
Based on a comprehensive standard range of products, WEG can supply motors in accordance with these applicable standards and complying with the requirements of the main Classification Societies, permitting its use in all marine industry (Offshore platforms, Ocean going Vessels, Passengers ships, etc.) and covering a wide range of applications on deck or below deck like for ex: pumping systems (for engine, steering, cooling and boiler rooms, etc), ventilating fans (for engine, cargo or boiler rooms, etc), fire pumps, cargo winches, oil separators, steering gears, starting air compressors amongst other extensive range of equipment and machinery that can be installed on board.
We have provided reliable service for several decades whilst offering effective solutions to today's technological challenges.
As a complement of standard executions WEG has the capability to study solutions and fulfill special requirements, allows us to develop or adapt standard products to the specific requirements of ship owners, shipyards or equipment manufacturers such as pumps, fans, compressors, etc.
For any particular requirements or specific certification, please refer to optional features described in this catalogue.

Please inquire us for a solution and we will provide you with the best suitable answer for your application!

2 MARINE MOTORS RANGE

WEG can offer a comprehensive range of motors covering all needs and specifications of Marine Industry

Standard motors fot Safe Areas

Motor type	Size	Frame	Power
W21	63 to 355	Cast Iron or Aluminium	0.75 up to 396kW
BF	315 to 500	Cast Iron	90 up to 1400kW
HGF	355 to 500	Cast Iron	100 up to 3150kW

Cast Iron motors for Hazardous Areas

Motor type	Size	Protect Method	Power
TEX	90 to 355	EEx d / EEx de IIB EEx nA	0.25 up to 378kW
BFG BFGC BFN	71 to 500	EEx d / EEx de IIB EEx d / EEx de IIC EEx nA	0.75 up to 900kW

Note: For the High Voltage electrical & mechanical data, please refer to a separate catalogue.

Other features

Other ranges are also available under request:

- EFF1 Premium and Top Premium Efficiency Motors
- Open Drip Proof motors
- High polarity Motors
- Multi-speed Motors
- TENV (non ventilated motors IC 418). Please contact us for the required power (For continuous service expect 30 to 40% of the standard power rating)
- Motors to be fed by variable speed drives: WEG benefits from a long experience in converter fed machines. WEG motors are designed to withstand the levels of dV/dT produced by inverters. To avoid circulating currents frequently responsible for bearing damages, insulated bearings are used.
- NEMA Motors: motors according to NEMA standards (dimensions)
- A. C. Synchronous Generators

3 STANDARD FEATURES

The Low Voltage motor ranges specified on this catalogue are suitable to use on 2 different onboard environments:

- Safe Areas: motors ranges W21 and BF
- Hazardous Environments: motors ranges ATEX Flameproof (W21-TEX), BFG and BFGC. These ranges meet the respective regulatory requirements in what concerns General and Specific Standards

Basic Standard Features

- Efficiency: improved EFF2
- Frame made of high-grade cast iron
- Voltages / frequencies stated on this catalogue:
  - 380V@50Hz or
  - 440V@60Hz
- Degree of Protection : IP55 as standard
- Motors fitted with V-ring seals, oil seals or labyrinth providing the best possible protection in dust and high moisture environments
- Terminal boxes with generous internal space with metric threads on entries allowing rotation in 90º.
- Insulation system thermal class: F
- Temperature rise: 90K or 70K, depending on application and requirement of
- Classification Society
- Nameplate: Stainless steel to keep a permanent record of motor data and certifications
- Colour: RAL 5007 (safe areas) or 5010 (hazardous areas)
- Re-greasing facilities frame size 225 SM and up

Optional Features

There are also some typical optional features to cover specific demands like:

- Degree of Protection: IP56 or IP65
- Special vibration class
- Special voltages available
- Insulation system thermal class: H
- Special painting
- All type of winding/bearings temperature protection/ detection
- Special shafts (materials, sizes, second shaft end)
- Special flanges
- Cable Glands
- Oil seals
- Space heaters
- Re-greasing facilities on smaller frame sizes
- Special bearing arrangements (roller-bearings for DE, trust-bearing, etc)
- Insulated bearings
- Drip cover canopy for vertical mounting
- Auxiliary terminal box
- Forced ventilation
- Encoder
- Brake
- Flying leads

Please check these options with the product cover sheet of each range.

4 STANDARDS AND CLASSIFICATION SOCIETIES

All motors are manufactured according to IEC and equivalent national standards for Rotating Electrical Machines:

- Rating and performance – IEC 60034-1
- Outputs and dimensions – IEC 60072 and EN50347
- Mechanical protection – IEC 60034-5
- Cooling method – IEC 60034-6
- Mounting arrangements – IEC 60034-7
- Insulation – IEC 60085
- Terminal identification and direction of rotation – IEC 60034-8
- Noise limits – IEC 60034-9
- Vibration limits – IEC 60034-14

Also are according to specific standards for Marine Use:

- Electrical Installations in ships – IEC 60092-series

The WEG Motors meet all requirements of all Classification Societies member of IACS:

GL	Germanischer Lloyd
BV	Bureau Veritas
DNV	Det Norske Veritas
LR	Lloyd's Register
ABS	American Bureau of Shipping
RINA	Registro Italiano Navale

Under request WEG may work also with the following IACS MEMBER SOCIET-

CCS	China Classification Society
KR	Korean Register of Shipping
NK	Nippon Kaiji Kyokai
RS	Russian Maritime Register of Shipping

(1) Classification Societies classify the motors as for "essential service" – E – or "non essential service" – N
(2) Classification Society not require the issue of any documentation (upon request WEGeuro can supply Routine/Type Test)
(3) Only for propulsion services
(4) One Type Test for the each motor type, a routine test for the remaining identical motors
(5) According to Standard EN 10204:2004

Safe Areas Low Voltage Motors Cast Iron Frame

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 1540kW
- Frames: 63 up to 500
- Voltage: 380 V, 50Hz or 440 V, 60Hz
- Class “F” insulation (ΔT=90K or 70K)
- Continuous duty: S1
- Design N
- Ambient temperature: As per Classification Societies, 1000m.a.s.l
- Squirrel cage rotor/Aluminium die cast or Copper
- Anti-condensation drain holes
- Regreasing nipples from frame 225S/M and above
- Metric thread cable entries in terminal box
- Thermistors 1 per phase fitted on frame size 160 and above
- Suitable for Inverter Duty applications
- Balancing with half key, vibration severity according to IEC 60034.14 grade A
- Color: RAL 5007

Optional Applications:

- Degree of Protection: IP56 or IP65
- Baring seals: Lip seal / Oil seal / Taconite labyrinth seal on frame sizes 132 and above
- Cooling Method: IC410 (TENV)
- Special Voltages
- Space Heaters
- Thermal protection on windings: Thermistors up to frame 132 / RTD - Pt100 Thermostats / Thermocouples
- Auxiliary terminal box
- Thermal protection on bearings (frames 225 and above): RTD - Pt100 / Thermocouples
- Design H
- Class H insulation
- Roller bearing for frame size 160 and above
- Special shafts/flanges
- Cable glands
- Forced ventilation unit for VSD application
- Encoder
- Brake (up to 315 frame)
- Flying leads through closing plate
- Special paint finish
- Insulated bearings
- Canopy for vertical mounting
- Special balancing to meet IEC 60034.14 grade B vibration level

More options available, on request

(1) Copper bar rotor
(2) Special Terminal box
(3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

(1) Copper bar rotor
(2) Special Terminal box
(3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

(1) Copper bar rotor (2) Special Terminal box (3) Special Oversized Terminal box

Tn = Full load torque Is/In = Locked rotor current Tmax/Tn = Breakdown torque In = Full load current Ts/Tn = Locked rotor torque

VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

Safe Areas Low Voltage Motors - Cast Iron Frame
W21 and BF Lines

(1) Copper bar rotor (2) Special Terminal box (3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

(1) Copper bar rotor
(2) Special Terminal box
(3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

Notes:
(1) 1500, 1000 and 750 rpm
(2) 3000 rpm
(3) or 6222 C3 for 4 poles and plus machines, N.D.E.
(4) For 60 Hz please contact WEG.

Notes:
- *All the dimensions are given in millimeters*
- *The customer must inform when application is vertical or on special coupling loads*
- *The values shown are subject to change without prior notice*
- *To obtain guaranteed values please refer to any local WEG office or it's distributor*
- *Shaft dimensions for II pole motors, only for direct coupling*
- *For changing power terminal box side, please contact our nearest sales office*
- *Execution with auxiliary terminal box and second end shaft available on request*
- *Terminal boxes for motors with nominal current higher than 1000A: 4xM63x1,5*
- *For vertical mounting, the D.E. bearing is replaced by an angular contact type, except for frame 315L (replaced by 7220 (1) or 7219 (2))*

Hazardous Areas (IIB)
Low Voltage Motors - Cast Iron Frame

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.33 up to 990kW
- Frames: 90 up to 450
- Voltage: 380 V, 50Hz or 440 V, 60Hz
- Class “F” insulation (ΔT=90K or 70K)
- Continuous duty: S1
- Design N
- Ambient temperature: As per Classification Societies, 1000m.a.s.l
- Flameproof motors Ex d or Ex de (when fitted with increased safety terminal box)
- Temperature Class T4; gases of Group IIB
- According to ATEX Directive 94/9/CE, Group II, category 2 for Zones 1 and 2
- Stainless steel nameplate including Certification data as per ATEX Directive
- Squirrel cage rotor/Aluminium die cast or Copper
- Regreasing nipples from frame 225S/M and above
- Metric thread cable entries in terminal box
- Thermistors 1 per phase connected into main terminal box
- Suitable for Inverter Duty applications
- Balancing with half key, vibration severity according to IEC 60034.14 grade A
- Color: RAL 5010

Optional Applications:

- Degree of Protection: IP56 or IP65
- Bearing seals: Lip seal / Oil seal / Taconite labyrinth seal on frame sizes 132 and above
- Cooling Method: IC410 (TENV)
- Special Voltages
- Space Heaters
- Winding thermal protection: RTD - Pt100 / Thermocouples
- Auxiliary terminal box
- Thermal protection on bearings: RTD - Pt100 / Thermocouples
- Design H
- Class H insulation
- Roller bearing for frame size 160 and above
- Double flange/shaft execution IM2202 (frames 355 and 400)
- Special shafts/flanges
- EExd or EExde Cable glands
- Forced ventilation unit for VSD application
- Encoder
- Certified purge
- Flying leads through closing plate
- Special paint finish
- Insulated bearings on frame 225 and above
- Canopy for vertical mounting
- Special balancing to meet IEC 60034.14 grade B vibration level
- Zone 22 (IP 5X)
- Zone 21 (IP 6X) - frame 355 and 400
- More options available on request
- Always check with factories optional executions
- Special balancing to meet IEC 60034.14 grade B vibration level

More options available, on request

(1) Copper bar rotor
(2) Special Terminal box
(3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

(1) Copper bar rotor
(2) Special Terminal box
(3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

(1) Copper bar rotor
(2) Special Terminal box
(3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

Notes:

- *All the dimensions are given in millimeters*
- *The data for frame 355M/L shown above are for horizontal mounting applications under standard coupling loads*
- *The customer must indicate when application is vertical or under special coupling loads*
- *Motors with second shaft end under request*
- *The values shown are subject to change without prior notice*

** Shaft dimensions for II pole motors, only for direct coupling*

- *All the dimensions are given in millimeters*
- *The customer must inform when application is vertical or on special coupling loads*
- *The values shown are subject to change without prior notice*
- *To obtain guaranteed values please refer to any local WEG office or it's distributor*
- *Shaft dimensions for II pole motors, only for direct coupling*
- *Drawings for 450 II pole frame motors available on request*
- *Execution with auxiliary terminal box and second end shaft available on request*
- *"EExde" execution dimensions on request*
- *For vertical mounting, the D.E. bearing is replaced by an angular contact type*

Hazardous Areas (IIC)
Low Voltage Motors - Cast Iron Frame

Standard Features:

- Three-phase, multivoltage, IP55, TEFC
- Output: 0.12 up to 500kW
- Frames: 71 up to 400
- Voltage: 380 V, 50Hz or 440 V, 60Hz
- Class “F” insulation (ΔT=90K or 70K)
- Continuous duty: S1
- Design N
- Ambient temperature: As per Classification Societies, 1000m.a.s.l
- Flameproof motors Ex d or Ex de (when fitted with increased safety terminal box)
- Temperature Class T4; gases of Group IIC
- According to ATEX Directive 94/9/CE, Group II, category 2 for Zones 1 and 2
- Stainless steel nameplate including Certification data as per ATEX Directive
- Squirrel cage rotor/Aluminium die cast or Copper
- Regreasing nipples from frame 160 and above
- Metric thread cable entries in terminal box
- Thermistors 1 per phase connected into main terminal box
- Suitable for Inverter Duty applications
- Balancing with half key, vibration severity according to IEC 60034.14 grade A
- Color: RAL 5010

Optional Applications:

- Degree of Protection: IP56 or IP65
- Oil seal on D.E. side
- Cooling Method: IC410 (TENV)
- Special Voltages
- Space Heaters
- Winding thermal protection (frame sizes 160 and above):
  RTD - Pt100 / Thermocouples
- Auxiliary terminal box (frame sizes 250 and above)
- Design H
- Class H insulation
- Roller bearing for frame size 160 and above
- Double flange/shaft execution IM2202 (frames 355 and 400)
- Special shafts/flanges
- EEx d or EEx de Cable glands
- Forced ventilation unit for VSD application
- Encoder
- Certified purge on frames 250 and above
- Flying leads through closing plate
- Special paint finish
- Detachable feet on frames 71 up to 160
- Insulated bearings on frame 200 and above
- Canopy for vertical mounting
- Special balancing to meet IEC 60034.14 grade B vibration level
- Zone 22 (IP 5X) and Zone 21 (IP 6X) on frames 250 and above

More options available, on request

(1) Copper bar rotor
(2) Special Terminal box
(3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

Hazardous Areas (IIC) Low Voltage Motors - Cast Iron Frame Ex d / Ex de and BFGC Lines

(1) Copper bar rotor
(2) Special Terminal box
(3) Special Oversized Terminal box.
VSD Operation:
- For VSD, with quadratic torque application load, please consider maximum output related to the Dq=70K column although considering temperature rise 90K. (Valid for frame sizes 400 and below. For frame sizes 450 and 500, please refer to us)
- For applications with constant load torque, please contact WEG.

Notes:
- All values are according to IEC 60034-1 tolerances.
- This data can be changed without prior notice.

(2) 3000 rpm

- *All the dimensions are given in millimeters*
- *The customer must inform when application is vertical or on special coupling loads*
- *The values shown are subject to change without prior notice*
- *To obtain guaranteed values please refer to any local WEG office or it's distributor*
- *Shaft dimensions for II pole motors, only for direct coupling*
- *Drawings for 450 II pole frame motors available on request*
- *Execution with auxiliary terminal box and second end shaft available on request*
- *"EExde" execution dimensions on request*
- *For vertical mounting, the D.E. bearing is replaced by an angular contact type*

- *All dimensions are given in millimeters*
- *The customer must inform when application is vertical or on special coupling loads*
- *The values shown are subject to change without prior notice*
- *To obtain guaranteed values please refer to any local WEG office or its distributor*
- *Shaft dimensions for II pole motors, only for direct coupling*
- *To change power terminal box side, please contact our nearest sales office*
- *Auxiliary terminal box and second end shaft available on request*
- *'EEx de' type dimensions on request*

Additional Information

Painting Plans

The painting plan given below, offer proper solution for each motors application.

Recommended Uses	Plan	Composition
Regular environment, not too severe, sheltered or not, for industrial purpose with Regular environment, not too severe, sheltered or not, for industrial purpose with low relative humidity, normal temperature variations and SO2 presence. Note: Not recommended for direct exposure to acid vapors, alkalis and solvents. Specific use recommendation: The 201 plan (standard plan) is indicated for normal manufacturing line motors.	201A	Primer Steel surface: A layer with 60 to 80 µm of polyester powder coating. Cast Iron Surface: a coating with 20 to 55 µm of synthetic alkyd primer. Finish Coat: one coating with 40 to 60 µm of synthetic alkyd enamel.
Severe industrial environment, sheltered or not. May have presence of SO2, vapors and solid contaminating and high humidity. Recommended for application in pulp and paper, mining and chemical industries.	202E	Primer Steel Surface: A layer with 60 to 80 µm of polyester powder coating. Cast Iron Surface: a coating with 20 to 55 µm of synthetic alkyd primer. Intermediate: a coating with 20 to 30 µm of isocyanate epoxy primer, only for FoFo and aluminium surfaces (except for surfaces with powder coating). Finish coat: a coating with 100 to 140µm of high thickness epoxy polyamid finishing.
Severe industrial environments, sheltered or not, may have presence of SO2, vapors and solid contaminating and high humidity. Specific use recommendations: Indicated for application in food processing motors – USA	202P	Primer Steel Surface: A layer with 60 to 80 µm of polyester powder coating. Cast Iron Surface: a coating with 20 to 55 µm of alkyd synthetic primer. Intermediate: a coating with 20 to 30 µm of isocyanate epoxy primer, only for FoFo and aluminium surfaces (except for surfaces with powder coating). Finish Coat: a coating with 60 to 100µm of aliphatic polyurethane primer
Regular environment, not too severe, sheltered or not, for industrial purpose, with low relative humidity, normal temperature variations and SO2 presence. Notes: 1- Not recommended for direct exposure to acid vapors, alkalis and solvents. 2- Do not apply the 203 plan in motors with steel plate frames.	203A	Primer Steel Surface: A layer with 60 to 80 µm of polyester powder coating. Cast Iron Surface: a coating with 20 to 55 µm of alkyd synthetic primer. Finish Coat: a coating with 50 to 70 µm of synthetic alkyd enamel.
Regular environments, not too severe and sheltered, for domestic purpose, with low relative humidity, and normal temperature variations. Note: Not recommended for direct exposure to acid vapors, alkalis and solvents. Specific use recommendations: For application in motors with steel plate frames, in which packaging process demands quick drying painting.	207A	Primer Steel Surface: A layer with 60 to 80 µm of polyester powder coating. Cast Iron Surface: a coating with 20 to 55 µm of alkyd synthetic primer Finish Coat: a coating with 30 to 40 µm of Synthetic Styrene Alkyd enamel
Regular environments, not too severe and sheltered, for domestic purpose, with low relative humidity, and normal temperature variations. Note: Not recommended for direct exposure to acid vapors, alkalis and solvents. Specific use recommendations: For application in motors with steel plate frames, in which packaging process demands quick drying painting.	207N	Primer Steel Surface: A layer with 60 to 80 µm of polyester powder coating. Cast Iron Surface: a coating with 20 to 55 µm of alkyd synthetic primer. Finish Coat: a coating with 30 to 40 µm of nitrocellulose finishing, (for motors with aluminium components, the finishing paint must be catalized with 610.0005).
Severe industrial environment, sheltered, may have presence of SO2, vapors and solid contaminating, high humidity and alkalis and solvent spills. Indicated for motors destinated to Petrobrás and its suppliers, for refineries purpose, as well as petrochemical industries that adopt the Petrobrás specifications.	211E	Primer Steel and Cast Iron Surface: a coating with 100 to 140 µm of Polyamide Epoxy Primer. Finish Coat: a coating with 100 to 140 µm each of Polyamide Epoxy Top Coat.
Severe industrial environment, sheltered or not, may have presence of SO2, vapors and solid contaminating and high humidity. Indicated for motors destinated to Petrobrás and its suppliers, for refineries purpose, as well as petrochemical industries that adopt the Petrobrás specifications.	211P	Primer Steel and Cast Iron Surface: a coating with 100 to 140 µm of Polyamide Epoxy Primer. Finish Coat: a coating with 70 to 100 µm each of aliphatic polyurethane enamel.
Aggressive Marine or Industrial Marine environments, sheltered, may have high humidity and alkalis and solvents spills. Indicated for applications in pulp and paper, mining and petrochemical industries. Note: Meets standard Petrobrás N1735 (condition 4).	212E	Primer Steel and Cast Iron Surface: a coating with 75 to 105 µm of zinc ethyl silicate (except for the aluminium parts). Intermediate: a coating with 100 to 140 µm of epoxy polyamide. Finish Coat: a coating with 100 to 140 µm each of Polyamide Epoxy Top Coat.
Aggressive Marine or Industrial Marine environments, sheltered, may have high humidity. Indicated for applications in pulp and paper, mining and petrochemical industries. Note: Meets standard Petrobrás N1735 (condition 4).	212P	Primer Steel and Cast Iron Surface: a coating with 75 to 105 µm of epoxy zinc rich (except for aluminium parts). Intermediate: a coating with 100 to 140 µm of epoxy polyamide. Finish Coat: a coating with 70 to 100 µm of Aliphatic Polyurethane Enamel.
Aggressive Marine or Industrial Marine environments, sheltered, may have high humidity. Indicated for applications in pulp and paper, mining and petrochemical industries. Note: Meets standard Petrobrás N1735 (condition 4).	213	PrimeSteel and Cast Iron Surface: a coating with 70 to 90 µm of zinc ethyl silicate. Intermediate: a coating with 35 to 50 µm of epoxy oxide iron. Finish Coat: a coating with 240 to 336 µm of Polyamide Epoxy Top Coat.

Notes:
1) For components manufactured in aluminium, primer application is not necessary, although, the component must be sand-blasted;
2) In case the client request the Plan 204 without finish coat, the motor must be provided painted with Primer and Intermediate composition;
3) Motors that have aluminium parts (cover and/or frames) must have these parts painted only with finish coat paint of Plan 207.

Standardized Mounting Configurations

The WEG electric motors are usually supplied in B3T mounting configuration with is suitable for horizontal operation.
They are also suitable to operate at any position. On request the same motors can be ordered as special including the following features: flange, special shaft, shaft down, footless, etc.
The chart below shows a range of different standardized mounting configurations. Each mounting gives a full description including configuration, reference, frame arrangement (foot mounted or footless), terminal box position (viewed from shaft end) and how motor is fixed.
